

## You Need a Tonic

There are times in every woman's life when she needs a tonic to help her over the hard places. When that time comes to you, you know what tonic to take—Cardui, the woman's tonic. Cardui is composed of purely vegetable ingredients, which act gently, yet surely, on the weakened womanly organs, and helps build them back to strength and health. It has benefited thousands and thousands of weak, ailing women in its past half century of wonderful success, and it will do the same for you.

You can't make a mistake in taking

# CARDUI

### The Woman's Tonic

Miss Amelia Wilson, R. F. D. No. 4, Alma, Ark., says: "I think Cardui is the greatest medicine on earth for women. Before I began to take Cardui, I was so weak and nervous, and had such awful dizzy spells and a poor appetite. Now I feel as well and as strong as I ever did, and can eat most anything." Begin taking Cardui today. Sold by all dealers.

**Has Helped Thousands.**

## WIRELESS TO FAR EAST

PRESIDENT WILSON AND EMPEROR YOSHIHITO EXCHANGE MESSAGES.

First Commercial Trans-Pacific Service—Many Messages Are Sent—President Sends Greetings to Far East Nation.

San Francisco.—Commercial trans-Pacific wireless service via Honolulu to Japan was inaugurated by the Marconi Wireless Telegraph Company, with messages sent by President Wilson and other prominent men from Bolinas Ridge, near here, to the Emperor of Japan and other dignitaries in that country.

Aimaro Sato, Japanese Ambassador to the United States, sent a message to George W. Guthrie, American Ambassador to Japan. From London was flashed by cable and thence by the new wireless route the congratulations of Guglielmo Marconi, the inventor, to the director of post and telegraph of the Japanese government.

A message from Melville E. Stone, general manager of the Associated Press, to the Japanese Minister of Foreign Affairs, said:

"Greetings and sincere congratulations on this new bond of union between Japan and the United States." Emperor Yoshihito of Japan replied by wireless to the message. President Wilson, relayed from Bolinas, Cal. The Emperor's message said:

"It affords me much pleasure that the first use of the installation of wireless telegraphy between Japan and the United States has been to transmit your cordial message. In return I send this expression of my thanks for the good wishes exhibited towards me and my people and of the hearty desire entertained throughout Japan for the continued prosperity and welfare of the United States."

"YOSHIHITO"

The message from President Wilson to the Emperor read:

"The Government and people of the United States of America send greetings to your Imperial Majesty and to the people of Japan and rejoice in this triumph of science which enables the voice of America from the Far West to cross the silent spaces of the world and speak to Japan in the Far East, halting the dawn of a new day. May this wonderful event confirm the unbroken friendship of our two nations and give assurance of a never-ending interchange of messages of good will. May the day soon come when the voice of peace will cross the silent messages shall go into all the world and its words to the end of the world."

"WOODROW WILSON."

CONTROL OF HOUSE STILL UNCERTAIN; G. O. P. LEAD

Democratic Leaders Oppositely Expect to Cut Down Opposition's Lead.

Washington.—Incomplete canvasses of the vote in several close Congressional districts brought no changes in the unofficial election results, which indicate that 217 Republicans, 212 Democrats and six of other parties have been elected to the Sixty-Fifth Congress.

Representative Woods, Chairman of the Republican committee, insisted that the Republicans undoubtedly would control the organization of the House. A speaker to be elected must receive a majority of the House or 218 votes. Although the unofficial returns show the Republicans to be one short of a majority, they are counting on the Progressive elected in Minnesota, the Progressive-Republican in Louisiana.

SUITS FILED ALL OVER U. S. IN ATTACK ON ADAMSON ACT

Washington.—Suits by railroads attacking the constitutionality of the six-hour railroad law were begun in many parts of the country and the Department of Justice laid plans to defend them. No offer has yet been made by the railroads to settle the question by one test case. Attorney General Gregory has made no such proposition to the railroads and the department is planning to contest each suit as it comes up for hearing.

FIGHTING ON ANCRE LESS VIOLENT, NO FRESH GAINS.

London.—In the Ancre region of France, where for several days the British have made notable gains over the Germans, the fighting apparently has lessened greatly in violence, the latest British communication reporting only bombardment by the Germans of their newly-won front to the north of the stream. An additional six officers and 297 men have been made prisoners by the British in this region during the last 24 hours.

Superlative Good Thing. It is a good thing to be rich, and a good thing to be strong, but it is a better thing to be beloved of many friends.

## LIVE STOCK OF FARM BARN

### APPROVED TYPE

#### OF FARM BARN

Proper Light and Ventilation Provided in This Up-to-Date Structure.

PLANNED TO SAVE LABOR

So Arranged That Farmer's Time in Doing Necessary Work is Reduced to a Minimum—Roof Construction Made Special Feature.

By WILLIAM A. RADFORD.

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to the subject of building works on the farm, for the readers of this paper. On account of his wide experience as Editor, Author and Manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 127 Prairie Avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The largest factor in the care of the stock is the stabling. Good light, ventilation and sanitary equipment mean more to the health and comfort of the stock, and to the sanitation and quality of the output, than any other factors. A large percentage of barns are so dark and damp as to be veritable breeding places for disease germs and vermin. Light is the greatest foe to germ life.

The illustrations shown here give an idea of the construction of a favorite type of modern farm barn. There are ten windows to light the cow stable and five windows for the horse stable. Special emphasis has been put upon providing a little barn

## COMB AND BRUSH FOR HORSE

Equipment Needed in Every Stable Whether on Racetrack or Farm—Use for Currycomb.

A currycomb, a broomcorn brush, a scraper, a stiff brush and a number of rags of the right sizes should be a part of the grooming equipment of every stable, no matter whether the stable is located on a farm or at the edge of a racetrack. In most instances the currycomb should be used only to lightly raise and loosen the sweat and scurf over the fleshy portions of the horse's body, the main reliance being placed upon the brush.

The brush is the best implement for cleaning the body, as it does the work well and easily, and it does not irritate the horse. I find that the primary use for the currycomb in cleaning most horses is in using it to scrape the dirt

and loose hair out of the brush, says a writer in an exchange. Because of its steel teeth and general harshness and stiffness, the currycomb should never be used about the limbs. There are some people who use it on the legs and about the body places of the horse's anatomy without irritating the animal past all endurance. They are softer-handed than most of us.

The broomcorn brush takes the place of the currycomb in cleaning the horse's legs. In using the currycomb it should be held flat and carried lightly in a succession of curved strokes, until all the dirt and scurf that may be in the horse's coat has been loosened. Then take the brush and with it thoroughly cleanse the hair and the skin.

After using the brush take a dampened cloth and go over the surface, following this by rubbing with a dry cloth. In cleaning and grooming the head and neck of the horse use the stiff broomcorn brush, clean with the hairbrush, and finish the operation with the dampened and dry cloths.

ALFALFA PASTURE FOR HOGS

Care Should Be Exercised That It Is Not Pastured Too Closely Cut Occasionally.

For "growing out" little pigs and curing over dry sows a good pasture is a valuable asset to the hog raiser. Alfalfa makes the best pasture for hogs. In pasturing alfalfa, care should be taken that it is not pastured too heavily. If this is done, the alfalfa will be badly killed out in two or three years and it will be necessary to reseed. Pasturing should never be carried on so heavily but that one-half ton of hay per acre can be cut three times a season. The occasional cutting of the alfalfa induces new shoots to grow, and hence greatly improves the pasture for the pigs.

HANDLING ALFALFA FOR HAY

Plant Should Be Allowed to Stand Until Well in Bloom—Sprinkle With Salt and Lime.

To make the best hay, alfalfa should be allowed to stand until well in bloom, according to the Nebraska College of Agriculture. In curing hays, it is well to keep in mind that the dust which is present in so much alfalfa is largely a result of the retention of foreign moisture, such as rain or dew, at making time, rather than the presence of a little moisture within the plant. If alfalfa is stored in the barn for horses, it is well, while moving it away, to sprinkle it generously with a mixture of equal parts of salt and air-slaked lime.

MAKING SUCCESS WITH HOGS

Breed and Feed Well and Give Good Care—Don't Allow Litters to Lose Growth.

1. Select large, roary, stretchy dams. 2. Breed to boars whose ancestry shows tendency to growthiness. 3. See that sow is in prime condition every day she carries the litter. 4. Don't allow the litters to lose an hour's growth from lack of proper nourishment or exposure after farrowing. 5. Use every precaution at weaning time to see that growth is maintained. 6. Bone-making feed must predominate in first six months of pig's life. 7. Maintain balanced ration later on and be sure the pigs grow every day.

NORTH CAROLINA BRIEFS.

Hickory is not only to have a white way in the business district, but is to double the number of electric lights in the residential sections. Masons from all parts of Western North Carolina were in Asheville last week for the fall reunion of the Asheville District Scottish Rite bodies of Masonry, which convened there. A class of 43 candidates is taking the various degrees, and these will be augmented as the higher degrees are reached. The North Carolina Federation of Women's Clubs met in Morganton last week. Governor-elect Thomas W. Bickett is busy in his office at Raleigh as attorney general getting his affairs, public and private, he said, in order, ready to assume his duties as governor early in January. A Durham hosiery mill was awarded contract for 100,000 pairs of hose. The contract price is 24 cents per pair. A former contract for 100,000 pairs cost only 8 cents per pair. The increased cost is attributed to higher labor and material costs.

Help For Girls Desiring Education.

We have on our campus an apartment house, a two-story building, of 25 rooms, with a frontage of 100 feet which may be used by girls who wish to form clubs and live at their own charges. Pupils can live cheaply and comfortably in this way, many of them buying their table supplies sent to them from their homes. For further information address J. M. Rhodes, Littleton College, Littleton, N. C.

ALFALFA PASTURE FOR HOGS

Care Should Be Exercised That It Is Not Pastured Too Closely Cut Occasionally.

For "growing out" little pigs and curing over dry sows a good pasture is a valuable asset to the hog raiser. Alfalfa makes the best pasture for hogs. In pasturing alfalfa, care should be taken that it is not pastured too heavily. If this is done, the alfalfa will be badly killed out in two or three years and it will be necessary to reseed. Pasturing should never be carried on so heavily but that one-half ton of hay per acre can be cut three times a season. The occasional cutting of the alfalfa induces new shoots to grow, and hence greatly improves the pasture for the pigs.

HANDLING ALFALFA FOR HAY

Plant Should Be Allowed to Stand Until Well in Bloom—Sprinkle With Salt and Lime.

To make the best hay, alfalfa should be allowed to stand until well in bloom, according to the Nebraska College of Agriculture. In curing hays, it is well to keep in mind that the dust which is present in so much alfalfa is largely a result of the retention of foreign moisture, such as rain or dew, at making time, rather than the presence of a little moisture within the plant. If alfalfa is stored in the barn for horses, it is well, while moving it away, to sprinkle it generously with a mixture of equal parts of salt and air-slaked lime.

MAKING SUCCESS WITH HOGS

Breed and Feed Well and Give Good Care—Don't Allow Litters to Lose Growth.

1. Select large, roary, stretchy dams. 2. Breed to boars whose ancestry shows tendency to growthiness. 3. See that sow is in prime condition every day she carries the litter. 4. Don't allow the litters to lose an hour's growth from lack of proper nourishment or exposure after far
