Nobody Catches Line Shot Out by Gunners-Twelve Women and For Children Among the Passengers.

St. Johns, N. F .- The crack Red Cross liner Florizel, from St. Johns for New York, by way of Halifax. with 140 persons aboard, including 78 passengers, piled up on the ledges near Cape Race during a blizzard and it is believed that all on board were

Naval gunners sent on a specia train from this city, shot a line across the bow of the partly submerged ship but waited in vain for it to be hauled rd. Just before darkness blottee the wreck from view, five men, driven from the forecastle by the giant seas, were seen to climb the forward rigging signalling feebly for help. when they failed to make fast the line it was feared that they had succumb-ed to'the cold and exposure. Those five were the only ones visible on board several hours after the ship

Somewhere beyond the white mae strom of breakers two staunch rescu-steamers, the Terra Nova, and the Home, manned by New Foundland Home, manned by New Foundiand sallors, Isy in waiting for a favor-able moment to send a boat 'hrough the surf, but though the storm ap-peared to be subsiding, it was feared that it would be daybreak before the sea moderated enough to make it pos-sible to approach the wreck.

Included among the passengers were swomen, and four children. Among te first-cabin passengers were John hannon Munn, a, managing director Shannon Munn, a managing director of the firm of Bowring Brothers, Lid., owners of the liner, and his three-year-old daughter, Betty. They were gong to New York to meet Mrs. Munn and Sir Edgar Bowring, one of the owners of the line, for a visit of two months in Florida.

Six cadets of the royal flying corps, on their way from New Foundand to join their comrades, were aboard. The body of one member of the detach-ment. Fred Snow, was included among the six washed ashore. Anoth-New Foundand officer who, it is er New Foundland officer who, it i feared was lost, was Michael Sullivar

Beneficial as Drink; Has Make Needed Repairs on Machinery Before Spring Rush.

-----

ACTUAL LOSS CAN BE SAVED

ners Who Wait Until Last Minut Before Examining Implements Often Encounter Trouble. —Place Orders Early.

(Prepared by the United States Depart-ment of Agriculture.) Much time, trouble and actual loss in the operation of the farm can be saved if the implements and ma-chines are well cared for and needed repairs made before the spring rush of work becing. Some farmers walt of work begins. Some farmers wall until it is time to use the implem then haul them out of their winter quarters. The man who follows this practice may find that important implements need repairs, and although the season is ripe for plowing or seed ing, which should be done without de lay, it is necessary for him to drog —all other work and attend to the re pair job which could have been done earlier in the season. Orders for re

This agents with the demand in different sections and enable them to make the best, possible distribution. At the same time, it will eliminate expansive delays in transportation at the busy

season. Preserve All Machinery

Preserve All Machinery. All practicable steps should be taken to preserve machinery now on hand Needless exposure to the weather should be avoided, and in cases where it is not practicable to house machin ery when idle, all bearings should receive a thorough application of heavy oll or grease to keep out moist-

ure and prevent rust. It is believe that on many farms machinery could be more adequately sheltered in the buildings available by exercising car in placing them so as to economiz space. Importance of Oiling.

Importance of using. More damage can be done to a ma-chine in half an hour through lack of oil or grease on some bearings than by a whole senson's exposure to the weather, succiplists of the. United States department of Agriculture de For this sort of neglect the clare. care . For this sort of neglect there can be no excuse, it is said. Opera-ing a machine without lubrication, er pecially when the bearings are sligh pecially when the bearings are sum-ly rusty, will quickly result in the wearing away of the metal, often to a considerable depth, in a very few min-nets. Expensive breakages, as well as serious delays, also may be caused by operating machines on which nuts have worked loose or have come off bolts to loosen or

study of our street planting will quick-ly bring an answer. Not one in a hundred is competent to choose the right tree for a street. The same per inght tree for a street. The same per-centage will care for them properly and about the same number will agree on the same tree. No resident of Los Angeles need be told of the outcome of such laxity of control, or, rathe such absence of control. The need for change is great, and the probler ries to high heaven for relief. Whe will it be solved, and solved aright? How long are we to continue under present conditions? All know change must come—why delay? Our charter framers may help us out by providing for a tree commission in full control, with a corps of trained experts, to give us a city in the near future of which our residents for all time may be proud as the really beautiful.—Los Angeles Times.

PUTTING YARD TO BEST. USE

ulletin of Department of Agricultur Gives Some Valuable Information to Those Interested.

The best methods to follow and the best crops to grow in order to make a small area like a back yard produce the maximum amount of food for th family are discussed in a publication of the United States de artment of Bulletin arriculture, Farmers' Bulletin 818, "The Small Vegetable Garden." In addition to furnishing information in regard to the fundamental principle of gardening, this bulletin describes in detail the culture of all of the co garden plants, and also furnishes a ta-ble showing in a concise form the quantity of seed needed for each kind of vegetable, the proper way and time to plant, and the material required to

to plant, and the material required to produce the crop. To make a small area produce a large amount of food, the bulletin points out that not only every foot of available space must be utilized, but that late or succession crops must be planted as soon as the earlier plants have been removed. To carry on gar-dening in this intensive way requires dening in this intensive way require careful planning in advance, and it is ended that a detailed diagram recommended that a detailed diagram of the garden be drawn up and the va-rious uses that it is planned to put each portion to, throughout the grow-ing season, be clearly indicated. On this plan the success or failure of the various enterprises should be noted

and the plan itself kept as a guide for the following year. Encouragement Counts,

Encouragement counts. In every town there are a few of taste and purpose who will take the helm. To thoroughly arouse public in-terest is a long and arduous task. Make a beginning. Results will at-tract attention and gain suppost. It was Gladstone who said: "One example is worth a thousand argu-ments." Organize, interest the local press, interest this department, your efforts and progress will cheerfully be given place and encouragement in these columns. Every year of the past decade Mr. Reed has written thanks for substantial ald given "Reed and Riverside" in city beautif-ention. In a very recent letter, in reviewing the progress of street plant-ing in Riverside, he writes: "I re-

member very distinctly the very effi-cient aid I received through the 'City Beautiful' department of the Times.' Let us hear of your work, no matter how humble or how small the com-munity—aid and encouragement will be extended to all alike.—Los Angeles

Fine Beef Specimen

(Prepared by the United States Depart-ment of Agriculture.) More than 700 county agents and emergency demonstration agents are now at work in the 83 Northern and Western states. The increase in agents since emergency appropriations be-came available was more in two months than the average yearly increase during any of the past four years.

PLACED AT WORK

County agricultural agent work is conducted by the United States de-partment of agriculture in co-opera-tion with the various state agricultural colleges and local organizations rep-resenting the farmers of the county in which the agent is located The county agent is usually selected by a committee representing the county or-ganization, on recommendation of the county agent leader at the agricultural college. There is at present an unsu-ally great demand for men qualified for work of this kind to earry out the plan, adopted under the food produc-tion act, of employing an emergency demonstration agent for every agricul-tural county in the United States not having a regular county agent. This is a part of the national plan to increase the production and conserve tion of food to meet the war emet

gency needs. Agent in Each County. Organization of port

Organization of new counties is rapid, especially in states of the cen-tral West, several of which have given assurance that there will be county agent or county monstration agent in unties by February 1. each of the

Maine, New Hampshire, Massachusetts. Connecticut. Rhode Island and Delaware already have an agent in each county, while New York, Indiana and Pennsylvania are almost complete-ly covered. Nearly half of the agriultural counties in the Northern and Western states are now being served by a local demonstration agent, and the indications are that the country can be completely covered before the beginning of another crop year.

One of the most gratifying features of the organization campaign in the forthern and Western states thus far has been that most counties taking up the work are arranging for it on a p manent basis many of them m plans for periods of three years.

Must Have Thorough Training The qualification requirement of agents are somewhat different in the various states. Graduation from an agricultural college is not in all cases required, though training substantial ly equivalent to a four years' course at such college is usually insisted up-on. A considerable amount of farm experience is a universal requirement, and it is preferable that some of this experience should be secured since completing the college course.

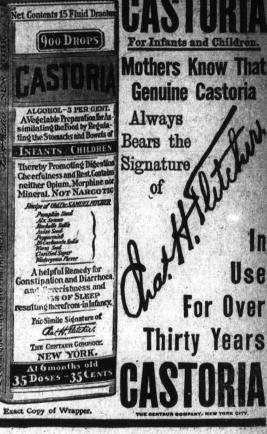

Additional information in regard to county agent work and the organiza tion of farm bureaus can be had by writing to your state agricultural c lege or to the United States depa

MANURE IS MOST VALUABLE

Fertilizer.

Humus-Making Material of as Much Benefit to Soll as Commercial

It is difficult to compare the value of stable manure with commercial fer-tilizer since the fertilizer has its plant food in a more available form than the food in a more available form than the stable manure; then, on the other hand, the stable manure has a value as a humus-making material which is almost, if not altogether, as valuable to the soil as its content of direct plant food. The stable manure contains much more potnsh and nitrogen than it does phosphorous, so that, consider-ing the high price and scarcity of both of these in a commercial form, it is more important that the manure be carefully saved and applied to the soil.
