HABITS OF RED-TAILED HAWK

Entitled to Protection Because of Insistent Warfare on Various Ro-dents in Orchards.

The red-tailed hawk, or "hen-hawk," as it is commonly called, is one of the best known of all our birds of prey, and is a widely distributed species of great economic importance. Its habit of sitting on some prominent limb or pole in the open, or fiving with measured wing beat over prairies and sparsely wooded areas on the lookout

Red-Tailed Hawk.

Only one feature appears to vex the student of municipal government. This relates to the payment of a salary to for its favorite prey, causes it to be noticed by the most indifferent obser-ver. Although not as omnivorous as the red-shouldered hawk, it feeds on a variety of food, as small mammals, the mayor, whose functions would be largely ceremonial—although he is to be a member of the council and its pre-siding officer and fees to the other four makes, frogs, insects, birds, crawfish; centipedes, and even carrion. In reglons where rattlesnakes abound it destroys considerable numbers of the reptiles. Although it feeds to a certain extent on poultry and birds, it is nevertheless entitled to general protection on account of the insistent warfare it wages against field mice and

marked ability .- Chicago Daily News other small rodents and insects that GUARD AGAINST ROSE SLUG are so destructive to young orchards, nursery stock, and farm produce. mice, rabbits, several species of ground squirrels, pocket gophers, and cotton rats, and only 62 contained the re-

mains of poultry or game birds. **BIG RETURNS FROM SPRAYING**

Additional Profit of \$1,000 Secured From Orchard of 200 Trees by Nebraska Man. Another convincing showing for

good returns from spraying trees has just come to hand from a Nebraska fruit grower, J. Ralph Cooper, who has completed three years of spraying work under the direction of his state experiment station. During the three years' period the unsprayed trees ma-tured only 13.4 per cent of marketable fruit. This left 86.6 per cent of the fruit that was fit only for vinegar, and gave an annual average income of only \$1.07 for the unsprayed trees. In con-trast, the fruit trees that were sprayed four times each season for the control of fungous diseases and insect pests, at a cost of 24 cents per tree for labor and spray material, returned an an-nual average income of \$7.38 per tree. This means an additional profit of over \$1,000 from an orchard of only 200

trees. GUARD TREES FROM RAVAGES

Mice and Rabbits Will Do Considerable Damage During Winter Sea-son in Orchard.

Every care should be taken to protect the young fruit trees from ravages this winter by mice and rabbits. Hun-dreds of young trees were destroyed last winter. There is going to be profit in every bearing tree for years to e. And when apples get scarce and dear is no time to rush into planting. Be ready for the prices. Wrapping the trees with crumpled newspapers tied with binder twine is a cheap way out.
