The Farm Bureau of St. Claire county, Mich., has to its credi, an accomplishment which will mean much to the future of the county. Due to an unfavorable season the much to the future of the county. Due to an unfavorable seasor the wheat crop was practically a failure, and the growers were obliged to obtain seed from an outside, source. In the natural course of events the elevators would have shipped in seed, some from one point, some from another, and the result would have been several kinds of wheat and none of it pure. At a meeting of the executive committee of the Farm Bureau the county agent was instructed to take orders for Red Rock, a superior variety of pedigreed wheat. Orders for 1.00) bishers came in promptly, and the agent went to St. Claire county, in the western part of the State, and through the assistance of the Farm Bureau of that county, easily obtained a carload of wheat that had been ininspected, rigidly, both in the field. ers. Production of cottonseed amounted to 5,040,000 tons worth \$33,550,000.

For the "cotton year" ended July 31, 1918, consumption amounted to 6,566,489 bales, exclusive of linters; exports amounted to 4,288,420 bales; net imports 217,381 bales; stocks on hand at beginning of year 2,720,173 bales.

and South Carolina and Georgia to Texas in April. Every indication points to a successful tour and that the joint meeting of the Uni-ed States Good Roads Association and the Eankhead National High-way Association will be the great est good roads gatherings ever held in the United States.

Millions For Good Roads.

Washington Post.

Washington Post.

"Utah, along with other states in the West is pianning extensive highway improvement in the next few years," said Simon Bamberger, Governor of the State, at Washington. "The state's purpose is to spend millions of dotlars in road improvement, the counties, townships and municipalities co-operating, the state.

"The problem of road improvement is one that heretofore has been difficult of sofution. There was a lot of interest in the highways, but it was scattered, and the efforts of those most active for them brought slow results. The war with its numerous lessons, however, has impressed the people as nothing else has with the sumportance of good roads. If we are to extend the development of our natural resources and increasiour food production, we must provide for adequate distribution of the, and there is only one way to do this, and that is by building, sufficient roads to drain all the by-ways of our vast country. Roads and cross roads must be built everywhere as a part of the national highway scheme.

"The building of roads fortunate ly is not so great a problem as it was five years ago. If it used to be that small armies of men were required to construct roads, but with improved machinery the work of construction now-a-days has been greatly simplified. It in no longer the toilsome labor it one-was, and men of ordinary physique can do the work the formerly able-bodied men did.

"It is my judgment that the roads will furnish employment for a large number of our returning soldiers.

able-bodied men did.
"It is my judgment that the roads will furnish employment for a large number of our returning soldiers.
Many young men who are partly disabled will be able to work on the highways, operating machines of all sorts.

Men killed in action or dead of wounds numbered 1,028,000 and to this total must be added 209,000 listed as missing and given up for lost, making a total of 1,327,800. The number of wounded was 3,000, 000, with 435,000 listed as prisoners Three-fourths of the wounded have recovered.

Slightly less than 700,000 are ab solutely unable to work and have been pensioned. The French government estimates the total number of unfit and pensioned may finally be between 800,000 and 900,00.

For Nasty Calomel

The losses among the native troop-coming from French colonies or protectorates were 42,500 killed or died of wounds, with 15,000 missing and very probably dead.

SANITATION IN THE HOG LOT

Important as Preventive of Cholers and Other Diseases—Clean
Is Relied Upon.

(Prepared by the United States Department of Agriculture.) The greatest drawbacks to the hog through hog cholera, tuberculosis, and the infestation of the animals, especially young pigs, by parasites, Were it not for the fecundity of swine their profitable production in the presence of these serious diseases would be out of the question. In the following remarks on sanitation no attempt is made to go into the details of the diseases affecting hogs or their treatment. The object is merely to call attention to the simple measures which may be used by any farmer to avoid, to a large extent, the decimation of his herd by epizootics. Cleanliness and rational methods of management are relied upon by thousands of farmers to keep their herds in health and vigor. They are the marks of the good farmer and

successful hog breeder. Hog cholera and swine plague, both highly fatal diseases characterized by fever and heavy mortality, are so very similar that the breeder may regard them as identical so far as his practical management of the herd is cerned. Positive differentiation be

Pigs Kept Under Sanitary Condit

tween the two diseases can only be made by the most careful bacteriological tests, and by employing the assistance offered by a fully equipped laberatory. However, sanitary preventive oratory. However, sanitary preventive methods which are found beneficial with one of these diseases will prove equally efficacious with the other. There are a few fundamental facts which the breeder must remember if

equally efficacious with the other. There are a few fundamental facts which the breeder must remember if he is to avoid losses through hog cholera or swine plague. The first is that they are specific diseases caused by germs, and the contagion cannot be spread from one animal to another or from one herd to another except through the agency of these minute organisms. They may be carried in a multitude of ways—by the hogs themselves, on the clothing of persons, on vehicles, in feed, by birds, dogs, and other animals, or by streams. The breeding or feed of a hog cannot cause either disease, although bad methods may so weaken the constitution and vitality that the animal becomes more susceptible to them than would otherwise be the case. Since these diseases can only arise from the presence of their specific causative agents, it can treadily be seen that dentition and the more or less, with one acre extensive be the case. Since these diseases can only arise from the presence of their specific causative agents, it can treadily be seen that dentition and the more or less, with one acre extensive between the presence of their specific causative agents, it can treadily be seen that dentition and the more or less, with one acre extensive between the presence of their specific causative agents, it can more or less, with one acre extensive the presence of the case.
