Saudi Arabia

There has been little manufacture in Saudi Arabia. The nomad Bedouins have tanned their own leather, woven their own coarse cloth tents and blankets. They have been their own blacksmiths and saddlers. In the towns artisans include weavers, silver and goldsmiths, masons, makers of spears and swords. King Abdul Aziz al Saud has converted many Bedouin nomads to townsmen. The country has fertile soil in the wadis of barren valleys, but except in the oases, irrigation is required for farming. Coffee and fruit are grown. It was the grazing of stock and the search for pasture in the arid land that developed the roving Bedouins. The Arabs raise fine horses, as well as goats, sheep and camels. There is little cattle because of lack of forage and of cold storage to preserve the beef.

Citrus Juice

If breakfast citrus juice is squeezed the night before as a time saver, keep it cold and covered, remembering that the less air space there is between juice and container, the better for vitamin C. With these precautions citrus juice will lose little of its most valuable vitamin, even if stored for 24 hours. So destructive are heat and air to vitamin C in cut fruit, that nutritionists advise cutting or slicing citrus fruit as near as possible to serving time. Pulp, as well as juice, contains vitamin C, and it is vitamin thrift to serve juice unstrained, and even higher vitamin economy in eating citrus fruit simply halved, sliced or sectioned. A half-glass (4 ounces) of orange or grapefruit juice will go far toward supplying a day's needs of vitamin C. So will half a grapefruit, or a whole orange, or a couple of tangerines or lemons.
