**Not a Joke to Officialdom**

MRS. MILES POINDEXTER, pictured above, is wife of the senator from Washington, who suffered defeat at the last election. Mrs. Poindexter wrote a home newspaper several articles in which she joked various men and women prominent in capital life. But they didn't consider it a joke. So much the contrary that the senator is encountering opposition as a possible federal appointee, to console him for loss of his seat. He has been mentioned for secretary of the interior, ambassador to Peru, a United States judgeship and other posts.

FOUR TYPES OF MACHINES RECOMMENDED FOR DUSTING COTTON

Raleigh, N. C. Feb. 28. There are four general types of machines recommended for dusting cotton, says Mr. Franklin Sherman, Chief of the Division of Entomology for the North Carolina Experiment Station. It is recognized that the cost of these machines, their liability to breakage and rapid wear, are some of the chief obstacles to dusting cotton with calcium arsenate as recommended by the State Government agricultural officials; however, the farmer who does not leave his machines in the hands of careless or indifferent tenants or laborers usually gets good results from their use.

Mr. Sherman says that there are many ways to do a thing wrongly; therefore there are ways to dust cotton so that no results will be obtained but good farmers are dusting with good results all over the south and the extension workers got good results in their demonstration in Scotland County and elsewhere last year.

Mr. Sherman has already told about the calcium arsenate to use. He now gives the four types of machines to use in applying this dust:

**Hand Gun.** Carried by the man operating it; crank turned by hand; treats one row at a time. Cost \$12 to \$18. One machine can attend to 5 to 8 acres for larger acreage get more than one. Not advisable to attempt these for more than 20 to 25 acres (too many machines, too many delays.) One of these machines will last from 1 to 3 years.

**Saddle Gun.** Sits on back of mule in front of operator who turns two cranks; treats a row each side. Cost around \$50. One machine can attend to 30 to 40 acres. Machine should last 2 to 4 years.

**One Mule Machine:** Runs between rows like walking cultivator, on one wheel which is geared to fan; operator holds handles like plow; mule between shafts; poison blown out of two nozzles behind operator, treating a row each side. Cost around \$100. One machine can attend to 50 to 60 acres. Should last 3 to 6 years.

**Cart Machine.** Two wheels, straddles a row; two mules; wheels geared to fan; operator rides; three nozzles behind; treats three rows at a time. Cost around \$250 to \$300. One machine can attend to about 100 acres. Should last 3 to 6 years.
