NEWSPAPER BEST ADVERTISING MEDIUM

Mr. Leonard called the merchants attention to the fact that their Association is on record against all gift, coupon, discount and other such schemes, particularly trading stamps, and warned them against the army of promoters of schemes of this nature which is now invading the South. "All such schemes are detrimental to legitimate business," he declared, "and the Supreme Court has in some of its decisions declared them to be a species of lottery and equal to gambling." It was also pointed out that all gift schemes are taxable under the North Carolina revenue act. "You should steer clear of all questionable advertising schemes. The newspapers are your best medium for advertising, and they deserve your liberal patronage. Money spent on advertising in your local newspaper also helps to give you a larger and better paper, and the newspaper is undoubtedly one of the community's greatest institutions. Give your newspaper your moral and financial support and then demand a good paper which covers your trade territory. In order that your adver-

tising will be read. You are just as vitally interested in the circulation of your newspaper as the owner of the paper can possibly be, because if the people of your trade territory do not read your newspaper, containing your advertising, they will read some other newspaper and read the advertising of the merchants of some other town," concluded the speaker. — J. Paul Leonard Secretary N. C. Merchants Association.

Not Such Good Luck
Youngwife—"It was just by luck that I was able to get this steak."
Younghusband—"It was sure tough luck."

It's the wonderful flavor in the biscuit that makes WILLIAM TELL Flour so popular.

in 14 to 21 Days
"LAX-FOS WITH PEPSIN" is a specially-prepared Symplo-Tonic-Laxative for Habitual Constipation. It relieves promptly but should be taken regularly for 14 to 21 days to induce regular action. It Stimulates and Regulates. Very Pleasant to Take. 50¢ per bottle.

Sweet Potatoes Will Sprout In Storage

Raleigh, N. C. April 3. These warm sunny days when the temperature begins to run high will cause sweet potatoes now in storage houses to sprout unless they are properly handled, says R. F. Payne, extension horticulturist for the State College and State Department of Agriculture. Mr. Payne states that when the outside temperature is over 50 or 55 degrees, all the windows, doors and ventilators of the storage house must be kept closed. When the temperature in the house runs over 55 degrees it should be cooled off at night or during the day when the temperature drops by opening up the house and letting the cool air come in. Then when the temperature has again dropped down to the desired level, the house should be closed tightly to keep the thermometer at this point.

Mr. Payne states that the storage house should be so built that it is insulated by the dead air space between the walls, and will remain cool despite the fact that the outside temperature is warm. He recommends that this cooling method be used often enough however, to keep the house at the desired level of 50 degrees.

Another fact of importance, is to move the top layers of potatoes from the house since the first sprouting occurs in the crates at the top. Here temperature is from 5 to 10 degrees warmer than nearer the floor. Mr. Payne states that careful attention should be given to this matter by storage house owners since it will likely save them considerable loss in their stored roots.

Ask your neighbor! She will know
WILLIAM TELL Flour!

Proprietor

Now to Plant the Garden

Raleigh, N. C. April 3. Now is the time to plant the vegetable garden and while it is hardly necessary to remind most people of this fact, still Frank E. McCall, garden specialist for the State College and Department of Agriculture, finds that it is necessary to urge gardeners to make their land perform more regularly than in the past. He states that it is possible to have some fresh vegetables direct from the garden every day in the year. This can be done by a careful planting for rotation of crops.

Mr. McCall states that early or quick maturing vegetables like radish, early peas, beans, leaf lettuce, spinach, beet and early carrots may be planted at regular two week intervals into the early summer. This will insure a continuous supply until mid-summer, at least.

Right now, Mr. McCall states that plants of cabbage, cauliflower, head lettuce and early celery as well as the seed of such long-season crops like parsnip, parsley, salsify and onion may be put out. In planting any of these garden crops, it always pays to use the best varieties and to use only good seed.

What He Meant

Ida—Jack Nerry tried to hug me last evening.

May—Oh, that's what he meant when I saw him hurrying toward your house. He told me he had a pressing engagement.—Boston Evening Transcript.

Panacea

The Boy (to the plumber)—Oh have you hurt your finger? Wait a minute and I'll get mother to kiss it well.

A recent report from the Mooresville Cooperative Creamery shows that it distributed around \$150,000 to its former patrons last year. How much plant food would a cotton crop of this value have removed from the territory, asks the dairy farming workers of the extension service.
