Wycoff White Leghorns Eggs For Setting

On account of the lateness of the season I have reduced the price on Settings of 15, from \$2.50 to \$1.00. If you are going to fool with chickens get the best. Wycoff White Leghorns lay the largest egg, and the chicks grow off faster into good large birds. The eggs are white. My supply of eggs is limited.

PLACE YOUR ORDER EARLY.

YOUR FUTURE

To make the most money possible, a farmer should know exactly what it costs him to produce each thing he markets. And, to know his production costs, the farmer should keep a good set of books. Wallace, secretary of agriculture, makes this point in a speech before the Institute of American Meat Packers.

It is true of each individual, no matter what we do for a living. The average farmer, in common with nearly everybody else, works on the law of averages. He makes money on some of his products, loses on others. At some time of the year, generally when he meets his obligations at the bank, he knows whether it has been a profitable year or not, but has only a hazy notion of what lines have been profitable and what unprofitable.

The average business organization used to be in much the same boat. Then, with the adoption of scientific book-keeping, Mr. Business Man learned his unprofitable lines—and dropped them. He also discovered what was making him money—and increased his activities in that direction.

There is such a thing as getting too much bookkeeping. A business goes crazy on system, to the point where there are as many keeping books as there are producing.

But bookkeeping, in moderation, is indispensable in modern times.

Bookkeeping shows us where we are making money and where we are losing—what to do and what not to do.

In the case of individuals, a simple set of books will strikingly bring home the money leaks that are keeping us from getting ahead. With this knowledge, one can go on a budget system, one knows where to limit expenditures, and thus can live within one's income and lay away so much regularly for savings and investment.

CANDIED SWEET POTATOES

4 medium sized sweet potatoes; 1 cup sugar; 1-4 cup butter; 1-4 cup water. Boil potatoes thoroughly done peel and slice. Place slices in baking dish with water, add sugar and butter and bake in slow oven.

FRENCH FRIED SWEET POTATOES

Cut potato in fourths or eighths lengthwise, wipe dry and fry in deep fat until golden brown, sprinkle with salt.

SWEET POTATO CUSTARD

One egg, white and yellow beat separately, 1-4 cup butter; 1-2 cup sugar; 1-2 cup boiled mashed potato. Flavor with vanilla and bake in pie tins lined with pastry.

Nearly one-third the total number of farm problems being studied by the scientists of the United States relate to field crops, soils and fertilizers. The study of plant nutrition is one of the oldest forms of investigation says Dr. B. W. Kilgore.

Sustained Flying Record Of Over 36 Hours Set Up By Aviators of United States Army

Dayton, O., April 17.—(Climaxing a day of superior flying, Lieutenants John A. MacReady and Oakley Kelly landed the Fokker monoplane T-2 at 9:43 o'clock tonight, establishing a new world's record for sustained flying. They were in the air 36 hours, five minutes and 20 seconds. In addition, eight other records were made. Travelling over a 50-kilometer triangular course, the pilots have covered 2,541.2 miles when they landed at Wilbur Wright field tonight, exhausted from the long grind which began at 9:38 a. m. Monday. Official observers immediately began checking records of the light and it will be certified to the Federation Aeronautique International as new world figures. Earlier in the evening, Lieutenant Harold R. Harris, McCook field, landed his de Havilland 4-B bi-plane after a 10 hour and 53 minutes flight in which he maintained an average speed

Tax Payers TAKE NOTICE

Pay your 1922 taxes before May 1st, as a penalty will be added and advertisement made on all delinquent tax payers at that time.

By order of Board of County Commissioners.

H. A. KEARNEY, Sheriff.

of 114 miles an hour and beat the former French record for 1,500 and 2,000 kilometers by an average of 49 miles an hour. His time for 1,500 kilometers was 8 hours and 9 minutes.

Shortly after Harris landed Lieutenant Rutledge Irvine, naval air service, landed his naval torpedo plane after establishing a world record for altitude carrying a dead-weight load of 2,422 pounds to an altitude of 11,200 feet. This flight was made in two hours and a half.

MacReady and Kelly veered off their course when they passed the Pylon at Wilbur Wright field at 9:40 p. m. after completing the 81st lap and after circling about the field several minutes to get their bearings, made a perfect landing at 9:43 o'clock.

Duty Of Farmers (Bernard M. Baruch)

The farmer must organize commercially to market his goods cooperatively on a big business scale in order that he will have a fairer relationship established between what he produces and sells and what he buys. Industry, labor, and business are organized to help themselves. The farmer remains outside. For his own salvation he must organize commercially or he'll get nowhere. He buys from organized industry and he sells

as a weak individual. The credit and other legal machinery has been provided for his co-operative marketing, but he has not yet been able to rise above internal quarrels between rival agricultural organizations to safeguard his own pocketbook.

Commencement at Cedar Rock

The order of exercises for Cedar Rock High School commencement, will be viz: Thursday evening, April 26, 8 o'clock Recitation Contest. Friday evening, April 27, 8 o'clock Exercises by the grade pupils. Sunday evening, April 29, 8 o'clock Sermon to graduating class, Rev. G. E. Spruill. Monday evening, April 30, 8 o'clock Class Day exercises. Tuesday, May 1, 10:30 a. m. Graduating Exercises and Literary Address to be delivered by Dr. W. L. Potat. Tuesday evening, May 1, 8 o'clock Play, Old Days in Dixie, by high school pupils. The public is cordially invited to attend these exercises. T. H. SLEDGE, Principal.

HOME DEMONSTRATION DEPARTMENT

It cost so little! I wonder why we give it so little thought; A smile; kind words a place, a touch. What magic with them is wrought."

If we can keep the first fly out of the house we will not have trouble this summer. The number of flies in a community is a fair sanitary index of that community, because flies and filth are synonymous. Flies grow and develop in filth and, an absence of flies means an absence of filth.

Early spring is the most effective time to fight the fly. At this time there are only a few flies which have survived the cold of winter. If these can be killed before they lay their eggs and multiply, and if stables and other out places are kept clean, keeping rid of flies will be an easy problem.

The flush egg-laying season is on and prices of eggs are dropping. Now is a good time to put away surplus eggs, to use later when eggs are scarce and prices high. The silicate of soda or water glass method is simple, cheap and effective. Eggs can be

preserved in it 10 to 12 months without trouble. To pack eggs, take a large earthen ware jar. Scald and clean thoroughly. Take one quart of liquid sodium silicate (the commercial grade) and add nine quarts of pure water that has been boiled, say 20 minutes and thoroughly cooled. Pack eggs small end down. The eggs can be put in each day as they come in until the jar is filled, allowing at all times two inches of the solution above the eggs. Use only strictly fresh eggs, clean but not washed and infertile eggs if possible. When the jar is filled cover with heavy paper, well tied on and glued on if possible. Shellacking the paper will help prevent the evaporation of water. Store in a cool, dry, dark place. When eggs are taken out for use or sale, they should be washed. One gallon of silicate will do for 48 to 50 dozen eggs. If eggs are sold sell them as preserved eggs.

On account of the surplus sweet potatoes that have been produced in this county it seems necessary to put on a "Buy a Bushel Campaign," that the farmers may get rid of, or at least materially reduce, the quantity they have on hand at present. Let's use sweet potatoes liberally, for soon
