By Keeton Arnett (For the National Boll Weevil Control Association)

New Orleans, May 21.—Stimulation of buying in the calcium arsenate market has been effected by the use of motion pictures in the instruction of used, to the nation Boll Weevil Con-trol Association.

Many farmers who have been dubious

MOTION PICTURES INTRODUCE poison have been converted, it is said, begins its ravages, the farmers turn and have placed their orders for a their attention to the best way to season's supply.

A large number of banks, chambers of commerce and other business interests are cooperating with the conselves the fact that a low rate of trol association in showing the films, "How to Poison Boll Weevils" and "Good Bye Bool Weevil," which are furnished by the United States de-partment of agriculture, and at presmethods of controlling the boll weevil partment of agriculture, and at pres-methods of controlling the boll weevil partment of agriculture, and at pres-according to reports from every sec- ent there are five sets of the films tion of the South where the films are

With the time already at hand in ome sections of the belt and near at hand in others when the cotton plants as to the results to be obtained by the begin to appear and the boll weevil

keep the infestation to a minimum.
It is believed that a majority of the selves the fact that a low rate of weevil emergence this spring gives them a crop chance that was not en-joyed last year and have determined to take advantage of it by poisoning either with calcium arsenate in dust form or with calcium arsenate-molas-ses mixture when there are as many as twenty weevils to the acre.

Some farmers have used poison in other years but due to the improper use or application have not obtained the best results, while others have never used it and both classes apparently are eager to see the films which demonstrate clearly the correct way ofusing calcium arsenate and stress the slogan, "do it right or not

Virtually the only way to determine the degree of infestation in young cot-ton is by thorough examination of every plant in a given number of rows in a field. It is pointed out by experts that while it is necessary for the farmer to get down on his hands and knees to make a proper examination of the plants it is not necessary to examine every plant in every field, calculating the infestation on the basis that the weevils are uniformly distri-

If calcium arsenate dust is not used at this stage it is recommended that an application can be made to the tops of the plants of a home mixture containing one pound of calcium arse-nate, one gallon of molasses and one gallon of water. The mixture should be applied by sprinkling a few drops on each plant from a home made mop within twenty four hours after mixing and about one gallon of the mixture to the acre should be used.

The cooperative carlot shipment poultry from Lenoir county raised the price of hens from 14 cents per pound to 20 1.2 cents to the farmers and pleased everyone ecept a few huck-sters. County Agent F. W. Risher re-ports that 212 farmers sold over 4000 head of poultry weighing over 18,000 pounds. The smallest check was for 60 cents and the largest was \$123. The farmrs made over \$90. The sellin in this was as contrasted to selling lo cally at the price offered.

Tom Tarheel says that the folks in his neighborhood have already made plans for the community fair this fall. They intend to show the progress made in the community during the year.

A new line of Spring Slippers and Oxfords for both Ladies and Gentlemen. Also a good line of work shoes for Men. Be sure to see them before you buy. To show you is all I ask... I will do the rest.

A full line of Groceries and feed stuffs at all times.
