

## Purina makes heavy laying Pullets

It's not too soon to start right now to feed your chicks for more eggs! Purina Poultry Chows contain just the materials needed for bringing chicks to rapid and profitable maturity. Early maturing pullets are heavy fall and winter layers. And, because Purina Poultry Chows bring pullets to maturity quickly, it pays handsomely to feed them. An ironbound guarantee comes with these Chows. Phone us.

### Collar and Cuff Sets the Call of the Mode

Sing a song of lingerie collars and cuffs, they are the fashion of the hour. Let every school girl join in the chorus, for pretty, lacy, frilly things at neck and wrist have such a happy way of giving one a refreshing start to classroom each morning. If one heed the promptings of the mode, one will see to it that the school-time outfit includes one of the popular youthful-looking fine flannel frocks either plaided, striped or in solid coloring. To wear with it, in the till of one's trunk, or in one's top dresser drawer should be a plentiful supply of lingerie collar and cuff sets, a lace vestee or two, a net and insertion bib effect and do not forget to include one of the detachable lace panels which drop from their matching collars to the very hemline of the dress. Garmented the most ordinary frock assumes a distingue air of charm and refinement.

It is not too early to prepare for the winter garden, say horticultural workers for the State College extension division.

North Carolina used 46,000 tons of fertilizer on the cotton crop this year; 99 percent of the cotton acreage was fertilized and the average cost was \$6.01 per cotton acre, say government statistics. Legumes and livestock will aid in cutting down this annual bill.

The American Association of Instructors and Investigators in Poultry Husbandry will meet at the State College on August 19. Poultrymen of the State are invited to attend. Dr. B. F. Kaupp of the State College staff is Vice President of the organization.

### THE SALIVA

The saliva is the first of the digestive fluids of the body with which the foods comes in contact. It is composed of about 94 per cent water and the other 6 per cent is ptylin, mucin, albumin and several different kinds of salts. Ptylin is the digestive ferment in saliva and converts the starch into sugar and is the first act of digestion. This action is very noticeable if starch foods are taken into the mouth without water and chewed slowly, in a short time a sweetish taste will be noted and with further chewing this sweet taste becomes a very prominent feature. This is the result of the action of the ptylin in the saliva, and is an experiment which any one may try and get an appreciation of the quick action of this body upon the starches. It is most important that the food be chewed slowly and thoroughly to allow for this act of digestion to take place.

The saliva further serves to moisten the food, make it soft so that it may be swallowed easily. If we were obliged to chew and swallow our food with nothing but water to moisten it, it would not slide down our throats so easily. So nature has provided us with glands in the mouth that supply a mucous to the saliva which serves as a lubricant to our food and makes it slippery. This lubricant, which is found in some of the salivary glands and in the mucous glands, is known as mucin. It is mucin that makes the saliva stringy and glue-like.

There are three sets of glands which pour moisture into the mouth and are known as salivary glands. There are two large ones in front of the ears, one on each side, called the parotid glands, each having a tube or duct which opens on the side of the cheek opposite the upper second molars. The opening of these ducts can be seen by stretching the mouth wide open and looking in the mirror. It is the parotid glands that become infected when we have the mumps. On the inside of the lower jaw there are two glands, which are called the sub-maxillary glands, and directly under the floor of the mouth and under the tongue, there are two more the sub-lingual. There are numerous little glands inside the lips and cheeks known as mucous glands, bathing them in a slippery lubricating fluid. If one will wash the roof of the mouth with a jet of water from a syringe, then dry with a napkin, and place the finger in such a position that the tongue can not wipe off or rewet the roof of the mouth one will note at least a few little globules of mucus appearing. If one of these is touched with the finger and pulled away it will be found sticky and may be drawn out to a fine thread. It sticks and hangs to everything it touches. The mucin is the substance in the saliva that coats the teeth, the mucous membrane and every part of the mouth. In the act of chewing, it is intimately mixed with food and causes it to slip easily over the surface of the teeth. It prevents the food from sticking to the lips, cheeks and gums. We could scarcely chew food without it. It also aids in the act of chewing, permits the food to be thrown easily back upon the teeth by the muscles of the tongue and cheek. Lacking this slipperiness the food would become unmanageable.

Albumin is not usually reckoned as normal constituent of the saliva, but it is frequently present. It is not supposed to have any definite function to perform in the mouth. It is there by accident or perversion of the secretory process, so generally supposed. The mineral salts found in the saliva are potassium sodium chloride, potassium sulphate, sodium carbonate and calcium carbonate and phosphate. The composition of saliva is very complex as will be observed by the above ingredients. Too complex for any other than a physiologist or pathologist so we have only given an outline of these fluids of the mouth as observed in the practice of dentistry.

## A Thought FOR YOU

Thrift is the basis of success in every wauk of life. Be thrifty and you will score a certain measure of success in whatever you undertake.

We welcome you to make this Bank your Thrift headquarters. Arrange to put by each pay day a certain amount of what you receive. We will take care of it, paying you 4% interest for the privilege. When you want it, the money will always be ready for you.

### TRUSTEE'S SALE OF TOWN LOT

By virtue of the power of sale contained in that certain deed of trust made by Dennis Alston and wife to Wm. H. Ruffin, Trustee, dated June 1, 1920 and recorded in Book 234, page 107 Franklin Registry, default having been made in the payment of the debt thereby secured and demand for foreclosure having been made on said trustee by the holder of the said indebtedness, the undersigned will, on Monday September 1, 1924, at the noon recess of Court, at the Court House door in Louisburg, N. C., offer for sale at public auction to the highest bidder for cash the property in said deed of trust conveyed and there described as follows:

Near to the town of Louisburg, adjoining the lands of Junius Hayes and

others, bounded as follows: Beginning at the Eastern corner of Junius Hayes on Hart Street; thence along said street in an Easterly direction fifty feet to an iron stake; thence at right angles to said street in a Southeasterly direction along a line parallel to Hayes Eastern line to a stake in Annie Green's line; thence Westwardly along a line parallel with Hart Street fifty feet to a stake in Hayes line; thence along Hayes line to the beginning, being a part of the Hart property, containing a dwelling; it being the property conveyed to Dennis Alston by Eastern Realty & Trust Co., by deed dated May 1, 1919, duly recorded in Franklin Registry, reference to which is hereby made. This August 1, 1924.

Wm. H. RUFFIN, Trustee. 8-1-5t
