

HOW DOCTORS TREAT COLDS AND THE FLU

To break up a cold over night or to cut short an attack of grippe, influenza or sore throat, physicians and druggists are now recommending Calotabs, the nausealess Calomel tablet, that is purified from dangerous and sickening effects. Those who have tried it say that it acts like magic, by far more effective and certain than the old style calomel, heretofore recommended by physicians.

One or two Calotabs at bed time with a swallow of water,—that's all. No salts, no nausea nor the slightest interference with eating, work or pleasures. Next morning your cold has vanished and your system feels refreshed and purified. Calotabs are sold only in original sealed packages, price ten cents for the vest-pocket size; thirty-five cents for the large family package. Recommended and guaranteed by druggists. Your money back if you are not delighted.—adv.

NOT EVERY WEEVIL PUNCTURES THE COTTON BOLL

Raleigh, November 3.—Despite the authority of those from Texas or Georgia or others who have been in weevil territory and ought to know, not all of the many insects sent in as boll weevils to Franklin Sherman chief of the Division of Entomology, are such weevils. During the past four or five years, while interest in the weevil has been at its highest in North Carolina, over 255 different kinds of insects have been sent to Mr. Sherman by folks who thought the insects were boll weevils. In many cases the senders had the authority of some person "who had been in Texas and ought to know." But they were not boll weevils just the same.

"At least thirty three distinct species of insects were included in these mistaken sendings," says Mr. Sherman. "One cotton grower sent us some cockle bur or stalk weevils, reporting that he had found the boll weevils living in the stalks of the cocklebur. The black grain weevil was abundant in 1921 and many sent in this insect as the boll weevil. The pine infesting weevils of about three species were sent in to the number of 71 with the senders reporting that they had found the enclosed boll weevils in piles of pine lumber."

"In addition to these, specimens of nut weevils, cowpea pod weevils, leaf bugs, plant bugs, jack snappers, soldier beetles, peach curculio and many others were sent with the sender strongly of the opinion that he was giving us specimens of the true boll weevil. Nor have we found many live weevils in the winter months. Because of its hard, shell-like covering, the weevil can live over winter but only a small proportion survive. In looking for weevils, however, many cotton farmers have learned more about insects and conditions of growth of the plants than they ever knew before. One man went so far as to confess that he had never known that cotton dropped its squares before he began to search for weevils."

THE PURPOSE OF PRUNING

Raleigh, Nov. 3.—The purpose of pruning is to change the habits of growth of a plant to encourage the greatest possible production of fruit by that plant.

The growers prune first to direct the growth of the young tree that it will form a strong framework of scaffold limbs or to form the future tree; he prunes, secondly, to allow the greatest amount of sunlight; third, to provide proper circulation of air; fourth, to remove all dead and diseased branches and filth, to do this by such careful and judicious pruning as to maintain the largest possible leaf surface while getting the first four objects named.

"These are the primary purposes of pruning a fruit tree," says Glenn O. Randall, extension horticulturist for the State College of Agriculture. "In forming the future tree, with apples, the scaffold limbs are distributed around a central leader limb which as the tree develops should become the trunk. With peaches, an open headed system of pruning is advisable, in which case the tree is trained to not more than four scaffold limbs so selected that no two limbs are directly opposite. This is done to prevent weak crotches."

Mr. Randall states that sunlight is necessary to best color of fruit and if there is not a free circulation of air, danger from plant diseases is greater. He says, "Experiments with apple trees made by the North Carolina Station show conclusively that it is best to thin out the small branches rather than to prune severely cutting back the large branches. Because of soil conditions in the Sandhills it is necessary to prune the peach trees here rather severely. In all other cases, however, it is not wise to cut out too much wood."

EDUCATION WEEK

The American Legion and National Educational association is calling again upon the people of the country to turn their thoughts to education for one week—November 17-23.

American Education week has become a fixed event in the lives of the American people. If it is accomplishing its mission in impressing upon the people the importance of education in the life of the nation, it is not time wasted.

Someone has said that education is to fit one to live. If this definition be the true conception of the purpose of education, certainly nothing has a greater bearing on the future of this community and every other place in America where people live.

Those in charge of our educational program have a great responsibility. If Education Week in any way serves to bring those not in touch with the public schools and their work, around to a sympathetic attitude of helpfulness, it will not have been in vain.

Education Week should be made the means of setting forth the school viewpoint and bringing about a more hearty response from the school patrons to the school program.

WHY SUFFER SO?

Get Back Your Health as Other Louisburg Folks Have Done.

Too many people suffer lame aching backs, distressing kidney disorders and rheumatic aches and pains. Often this is due to faulty kidney action and there's danger of hardened arteries, dropsy, gravel or Bright's disease. Don't let weak kidneys wear you out. Use Doan's Pills before it is too late! Doan's are a stimulant diuretic to the kidneys. Doan's have helped thousands. They should help you. Here is one of many Louisburg cases:

Mrs. W. M. Pleasants, Cedar St., says: "I had severe pains in my back and a lameness and soreness. If I lifted sharp pains shot through me. My kidneys acted too freely, my head ached and I was nervous. Doan's Pills, from the Aycock Drug Co., relieved my back and regulated my kidneys."

OVER THREE YEARS LATER, Mrs. Pleasants added: "I have been in the best of health for several years and haven't needed a kidney medicine."

The Season Is Here

And We Are Ready To Gin Cotton

Our machinery is in first class condition.

We have our same force employed.

We want to handle your seasons business.

We buy cotton and seed. We trade meal for seed at oil mill exchange and charge you nothing to haul both ways.

We furnish you storage for both cotton and seed as long as you want to use it free.

We receive cotton for members of the North Carolina Cotton Growers Cooperative Association and cash your draft same as any bank. Those of you who have been ginning with us know how we treat you one and all the same way.

We have no pets, but do the best we can for each customer, with one hundred or one bales of cotton brought to our gin.

Ask any fo our pas seasons customers.

We can also supply your wants for yourself and family at our store, where you will always find merchandise and prices as good and as cheap as can be sold.

Your friends at all seasons of the year.

W. D. Fuller & Co.

Cover Crops!

Cover Crops!

Cover Crops!

Let's ask ourselves why the best farmers all over the South today are sowing cover crops, talking cover crops, and many of them even dreaming about cover crops.

When we really let ourselves think what ails Southern farming, it's easy to see why cover crops constitute the medicine we are after. The greatest needs of our Southern soils are protection from washing and more humus and nitrogen. Cover crops supply these three needs, and supply them with less expenditure of time, labor, and money than any other means. A systematic and persistent use of cover crops will make poor land rich, will give increased profit from the use of fertilizer, and will furnish the cheapest livestock feed that we can produce. They do all this without interfering with the crops we habitually grow and actually aid in making the crops that follow of better quality and heavier yields.—(Progressive Farmer)
