

# O'NEAL DRUG COMPANY

## NEW DRUG STORE

### New Drugs and Medicines

### NEW FIXTURES

To Open Saturday Morning, Nov. 18th, 1944

It is gratifying to announce to the people of Louisburg and Franklin County that we have opened an entirely New Drug Business in Louisburg for your convenience and profit. Our entire stock is new and fresh. Our fixtures are new and of the latest design. Our fountain is the newest in all details. We invite you to come in and see us and let us serve

you with the assurance of the best of service and satisfaction.

Our Prescription Department will be in charge of Mr. D. S. Chapman, of Durham, whose experience and training entitles him to your confidence.

In addition we will have Miss Louise Burnette, of the Sandy Creek Community, and Miss Sarah Collins,

of the Cedar Rock Community, to assist in the sales department, including the fountain and accommodations.

The store will be in charge of Mr. F. L. O'Neal, who is well known to the people of this section, having been with Scoggin Drug Co., a number of years, and is very popular because of his ability and courtesy.

A most cordial invitation is extended everybody in this trade section to call in and see our New Store.

O'Neal Drug Co. - Louisburg, N. C.

BETWEEN ROSE'S AND PRODUCTION CREDIT ASSOCIATION

#### SCIENCE AT MILLS HIGH SCHOOL

By C. R. Pruette

For quite a time now, the biology classes have been studying the circulatory system. The study has been one of interest, and one in which a great deal of interest has been shown. The topics have been quite varied, ranging from the colors on the barber's pole to hemophilia.

We are ending this unit by making a card board man to represent the circulatory system. The arteries and veins will be made out of glass tubing. The glass is being bent to follow the circulatory system as closely as possible. For blood, potassium permanganate will be used. When mixed with water, the dissolved material gives a blood red color.

If a force pump is attached the downward push of the piston will force the liquid into the beginning tube, causing the liquid to circulate on the order of a

neon sign. All persons interested in seeing this mechanical circulatory system will find this project on display in the Science department during school hours. I will be very glad to demonstrate it at your pleasure.

The Science department wishes to thank J. T. Beal of the General Science class for the use of his overshot water wheel model.

An experiment of interest to the General Science class as well as the other science classes was a model of an air thermometer. The air thermometer was made first by Galileo and worked on the simple principle of air expansion. The thermometer for practical purposes was of no definite value, except for the fact that it was probably one of the first attempts made to measure heat.

The biology classes have been troubled for sometime as to why barber's poles are colored red and white, like a stick of colored candy.

The idea of the barber's pole

is a sign by which the barber informs the public that at one time barbers were surgeons. They performed the duty of letting blood and other functions dealing with surgery. Barbers did the physician's work as the physicians felt it was beneath their dignity.

The barber, today, no longer practices surgery as he did during the middle ages, but he still remembers his old job, so in order to preserve this old function for mankind, we find his red and white revolving pole—red designates blood—white designates the bandages used.

Thought for the week: Why does one weigh less at the equator than at the North and South Poles? (Answer next issue of paper).

Supplies of fresh eggs in the United States were heavier during October than a year earlier but still short of needs, says a Government report.

County AAA election meetings will be held in North Carolina between November 20 and 25.

#### J. M. CULBRETH TO LOUISBURG (Continued from Page One)

M. Walters, District missionary secretary, R. L. Jerome, District director of evangelism, R. G. Dawson.

Retired, J. W. Bradley, J. A. Daily, E. H. Davis, E. M. Hall, C. P. Jerome, J. W. Potter, N. C. Yearby.

Littleton, H. L. Davis; Littleton circuit, D. C. Boone. Nashville, D. M. Sharpe. Norlina, W. T. Phepps. Rocky Mount—Clarke Street, R. E. L. Moser, First Church, E. L. Hillman; Marvin-St. Paul, M. R. Gardner. Spring Hope, B. F. Musser. Warren, N. W. Grant. Warrenton, E. R. Clegg. Wilson, W. C. Ball.

Rev. Forrest D. Hedden was sent to Dunn and Rev. J. C. Chaffin to Swan Quarter.

#### THE LOW DOWN

#### HICKORY GROVE

Most everybody is hipped on something, or allergic to this or that. Like where he or she must have a change from a high to a low altitude or vice versa, twice a year—and get from same a couple nice trips.

When the needs of the army and navy lessen, so that a person can move around without hampering the war, I am going to get a little allergic to my home grounds myself. Thousands of others will be in the same boat.

If I was in the Securities business, I would load up my customers with oil stocks—railroads—airplanes—automobiles—or stock in any outfit that has anything to do with going places.

With a Congress that has its feet on terra firma, and using its noggin, nobody can stop prosperity from overtaking us—after the war. But it must keep its 6-shooter oiled for bright guys trying to make America into another Europe—socialism and all.

Yours with the low down, JO SERRA.

#### FRANKLIN COUNTY FARM AGENT DEPT.

Mr. G. C. Mitchiner, Franklin County, R. 2, placed his order this week for 1,000 pounds of Coker's 100 Strain 8 cotton seed. Mr. Mitchiner was one of the first purchasers of Coker's 100 strain 8 cotton seed in Franklin County. He has taken the lead in reproducing these seeds for neighboring farmers. At the present time approximately 100 per cent of cotton grown in his community is of the Coker's 100 variety.

Calculated corn yields on the acres of W. J. Bowen, Henderson, R. 2, and H. F. Mitchell, Kirtrell, R. 1, were equal. In order to break the tie the two acres of corn were harvested Tuesday under supervision of the judges of the corn contest with Robert Allen, Youngsville, R. 1, W. O. Lambeth, Louisburg, and K. S. Parrish, Louisburg, R. 2, acting. The acres were measured and each ear harvested was weighed. When figures were totaled, there was found to be a difference of only 200 pounds in the two acres. Both plots yielded above 2 3-4 tons of corn to the acre. The awards will be made at a meeting in the near future.

A visit was made to Halifax County to study production of maize and its possible substitution for corn. Farmers in Halifax County were found to be well pleased with maize as a substitute for corn. I was advised that several farmers had practically discontinued the production of corn and were seeding maize altogether in its place for work stock, hogs and cattle. They advised, however, that crushing was essential before feeding. Maize appears to be a dwarf sorghum that grows approximately 3 feet high. It has the advantage over corn in that it will produce good yields when seeded during the month of June. It can be harvested with the combine after the harvest of soybeans and lespede, as, thereby competing very little with tobacco and cotton in cultivation and harvest. Since it is planted thick in the row, very little cultivation is required. Plans are now being developed to introduce this crop to Franklin County farmers next year. Mr. J. H. Fuller and Mr. M. H. Hunt on Raleigh highway have small areas planted this year that can be observed now.

Some men are as inconsiderate of waiters as they are of their wives.

—On Pay Day, Buy Bonds—

Women hide the price of a "permanent" in the cost of a roast beef dinner just as effectively as a salesman slips a new hat into his expense account.

—On Pay Day, Buy War Bonds—

Another Pennsylvania Dutch expression: A wife to her husband who was trying to say something with his mouth full, "Eat your mouth empty and then say."
