# Health And Beauty

Summer is harder on your eyes than any other season. Bright sunlight and reflection actually bleach out your eyes. The heat dries the delicate skin around the eyes causing lines to deepen and new wrinkles to form.

The heat, and, particularly the hot winds, dry the natural moisture from the eyes. This results in the hot, burning sensations so often experienced during the summer.

Good sunglasses will protect your eyes, and are one of the most important investments in health and beauty protection you can make. Cheap dark glasses can cause all kinds of eye trouble.

The most satisfactory dark glasses are those with optical ground lenses which have been treated to screen out the burning rays. If you wear glasses regularly, sunglasses in your prescription are best. Sunglasses which clip on over your regular glasses are said by doctors to be harmful.

Sunglasses come in so many different colors, sizes and shapes that it will be no trouble to find a pair suited to your face and coloring. Remember, however, that the lenses must be large enough to cover the entire eye area.

Use a mild eye lotion in your eyes several times a day if you are at the beach, traveling, etc.
