ASCS County Committee that diverted acreage should be properly maintained throughout the remainder of the year.

Proper care and use of the land diverted is a requirement for earning diversion and price-support payments and for establishing eligibility for price-support loans, Mr. Brewer said

Diverted acres must be land of average or better productivity that would normally be devoted to such crops this year if there were no programs. The diverted land must be kept in a good state of cultivation or have a cover crop. Noxious weeds should not be allowed to mature on diverted acreage. In addition, no crop may be harvested and the land may not be grazed between April 30 and October 1, Brewer said. The purpose of diverting acreage is to help prevent excess production of these crops. At the same time, the Department of Agriculture is concerned that of diverted acreage not add to excess production of other crops and also that he land be properly conserved to prevent soll erosion and water siltation. Mr. Brewer emphasized

that failure to maintain diverted acres can result in loss of all or part of any payments otherwise earned.

Franklinton **Head Start** Graduation

(FRK. B.W.) Franklinton Head Start summer program was concluded with gradua tion exercises in the High School auditorium on Thursday morning.

Mr. Ollie Burrell, director, welcomed the parents and friends, Supt. R. B. Gordon remarked about he value and accomplishments of Head Start.

The students presented a musical program. Rhythm band instruments were played and songs were sung. Serving as music director was Mark Joyner.

Mr. Burrell presented cer tificates to 67 students. (Names on back of pink pro-

gram.) Following the presentation of certificates, the program was concluded with the sing-

ing of "America." You might as well laugh at

yourself at times - everyone else does.

Professor Discusess Apple Growing

tremendous strides in the production of many crops in the last half century. Among these crops is the apple, which can be grown to per-fection in our upper Piedmont and mountain counties.

Let's go back now in his-tory to the year 1896 and review some of the comments and predictions made at that time by Professor W. F. Mas-sey, North Carolina's first horticulturist. Then I will quote sections of a letter which seem to give authority to Professor Massey's prediction

Professor Massey was speaking, in general terms, of the mountain counties where apples were grown at that time and where our commercial acreage is now concen-trated. He had this to say: "This region is the home of the apple and is destined to become the greatest apple growing region in America when its capabilities in this respect are fully known to fruit growers. Many apples are grown there already but the varieties most popular in the North are not grown to the extent they should be.

"The exhibits from North Carolina and Virginia at the Chicago Exposition opened the eyes of dealers to the great value of certain varieties which grow here to greater perfection than elsewhere. This is particularly true of the Winesap and York Imperial (sometimes called Johnson's Fine Winter)." He had much more to say but I have given the essence

Now, by way of a newsletter, word comes from one of the largest marketing firms in the United States reminding the trade of the increasing importance of apple produc tion in North Carolina: "Our studied opinion is that this state will rise to he stature demanded of the earliest major volume state in dessert variety marketing. Watch her It is easy to find an excuse for what one does not care to

increase rapidly as extensive new plantings begin produc-What the writer had in mind was the very favorable ing position we occupy in the early marketing of some of our major varieties. This is particularly true of the red

(color) sports of the Delicious variety. While the growers are conscious of the favorable posi-tion related to the "early deal," they realize, too, that our marketing problems are not solved. Competition is becoming keener and more emphasis is being placed upon high quality fruit.

It is still difficult to impress upon some North Carolinians that apple production is big business, and it's grow-ing. In 1969, the commercial production is estimated to be 6,500,000 bushels; and will
