E. L. HAYWARD,

SURELY SEEMED A GOOD BET

Unfortunately Horse Races Are Not Conducted as This Young Lady Imagined.

Representative Cannon was arguing a tariff question at a dinner in Danville.

"My opponent," he said, "reminds me of the young lady at the races. This young lady's exert said to her:

"Podasokus is the favorite. Suppose I put a ten-spot on him for you both ways?"

"Oh, yes, that will be jolly," said the young lady.

"Well, the race was run, and Podasokus, the favorite, was nowhere. He came lounging in about seven-tenths.

"How much do I get?" cried the young lady, as poor old Podasokus arrived, and she clapped her little hands together for joy.

"Why—er—nothing," said her escort.

"But how silly you are!" said the young lady sharply. "Didn't I bet on Podasokus both ways? Then I gain, of course, whether he won or lost."

THE MODERN WAY

Uncle Joe—So tomorrow you bring home your bride?

Sammy—Now, uncle, that's old-fashioned. She's taking me home to her folks for a while.

PLATING ON ALUMINUM

Some time ago there were reported the details of a method invented for plating on aluminum, an achievement that had long been striven for with little success. The chief difficulty appears to arise from an invisible film, which forms on aluminum when exposed to the air.

By the method mentioned this film is dissolved off in a bath containing soluble fluorides. A little free hydrofluoric acid appears to act best. Then a coating of zinc is formed on the aluminum in a plating bath, and upon this coating copper, silver and other metals may be deposited.

In order to form a gold plating the zinc covering the aluminum must first be coated thinly with copper, as otherwise the gold sinks into the zinc, and in a few weeks almost disappears.

NEW USE FOR ALUMINUM

Owing to the property which aluminum possesses of producing a very high temperature when burned with substances that give off oxygen, it has been employed for making a detonator for firing explosives which do not readily respond to the action of the detonating compositions generally used.

The aluminum is used in the form of a powder mixed with the other substances filling the percussion caps or detonators. The sudden high temperature induced by the pulverized aluminum results in a greater mechanical energy than can be produced with compositions not containing aluminum. —New York Herald.

FLIGHTS IN FOG MADE SAFE

A French navy lieutenant has perfected a system whereby the principle of the submarine cable for directing ships is now applicable to airplanes flying by night or in a fog. Two or three amperes of alternating current are sent over telegraph wires; electromagnetic appliances aboard the plane are tuned to the same frequency. The pilot is said to pick up vibrations easily from a distance of three miles, and to follow the wires without difficulty. —Scientific American.

POPULAR

Dicky was very proud of his cat and her pretty little kittens.

One day a woman called and he showed them to her. She admired them and remarked, "What a nice mother the old cat makes."

"Yes," said Dicky. "Frisky has had three helpin's of kittens."

Chamberlain's Tablets Have Done Her a World of Good.

"Chamberlain's Tablets have done me a world of good," writes Ella L. Button, Kirkville, N. Y. "I have recommended them to a number of my friends and all who have used them praise them highly." When troubled with indigestion or constipation, give them a trial and realize for yourself what an excellent medicine it is.

Notice of Qualification As Administrator.

The undersigned having qualified in the Superior Court of Halifax county, North Carolina, on Monday, October 2, 1922, as administrator of the estate of Mary Estelle Allbrook, deceased, hereby notifies all persons holding claims against said estate to present them to him at his office in Weldon, N. C., duly verified, on or before one year from the date of this notice or the same will be pleaded in bar thereof. All persons indebted to said estate are requested to make immediate payment.

This 4th day of October, 1922.
W. E. DANIEL,
Admr. of Mary Estelle Allbrook, dec.
oct 12 21

DANGER IN USE OF CHAMOIS

Writer Points Out Why Gasoline Should Never Be Filtered Through That Particular Material.

There is great danger connected with filtering gasoline through chamois skin—in fact, gasoline and chamois skin make a very deadly combination. Suppose, for instance, that a gasoline tank in an automobile is about to be filled. The funnel is placed in the hole for filling.

The chamois strainer is placed in the funnel and gasoline turned on. As it pours through the chamois it generates static electricity. Static electricity may be defined as electricity at rest. It is an agent neither of construction nor destruction, so long as nothing is done to unleash it.

Static electricity, generated by the gasoline, is stored up in the funnel. As long as it is in contact with the gasoline tank there is no danger, as it is well grounded, but if the funnel be held a short distance away from the tank and the operation continued, enough static electricity would accumulate in the funnel to eventually jump the gap between the funnel and the tank, producing an electric spark.

In so doing the spark passes across the opening between the end of the funnel and the edge of the tank through which gasoline fumes are rising. The result is invariably an explosion. —From Fire and Water.

ALCHEMIST KEPT HIS SECRET

Scot Reputed to Have Had Power of Transmuting Gold Refused to Give it to World.

Alexander Seton, a Scottish alchemist, was thrown into prison by the duke of Saxony, who demanded of him the secret of the philosopher's stone. Seton refused to produce a fortune in transmuted gold which the duke asked for his ransom, and even under torture he told nothing. But when a fellow alchemist, Sendivogius, offered to help him escape in return for a little information about alchemy, Seton agreed.

He regained his freedom, but, with the caution of the Scot, he refused to tell his secret to his deliverer. Instead he gave Sendivogius an ounce of transmutation powder. This powder was used to such good effect that Sendivogius was credited with cures of diseases and production of gold. But eventually the ounce was used up. Seton was dead by that time, and the less skillful friend married his widow, hoping that the Scot had left her the secret of mixing the powder. If she knew, however, she never told her second husband.

RAW! RAW! RAW!

An Indiana print shop recently received an order for posters advertising a Fourth of July celebration to be held in a district, the inhabitants of which seem to be advocates of simplified spelling. The "copy" for the posters, after going into details concerning entertainment to be provided for those attending the day's celebration, concluded:

"Raw! Raw! Raw!"
"To—July Fourth, let's go!"
"Raw! Raw! Raw!"

The compositor intended to follow copy and probable fatal results for the celebration would have ensued had not another employee of the shop chanced to cast an eye over the job and insist on a slight change in the spelling. —Indianapolis News.

NEW AIRPLANE ENGINE

A water-cooled Diesel engine of radial-cylinder type has recently been designed in Italy. It is claimed, according to an illustrated article in Popular Mechanics Magazine, that the engine will operate on any of the heavy fuel oils and will develop one horsepower for less than two pounds of engine weight.

HUMAN HAIR AS A COMMODITY

Forty bales of human hair is one item of a cargo reaching Seattle from China. Each 133-pound bale is worth more than \$400 here, our annual imports exceed \$500,000, and most of the hair goes into hair nets. —Scientific American.

MILK SUPPLY BY TRUCK

Approximately 90 per cent of the milk consumed in Los Angeles, 75 per cent of the bread and 500,000 pounds of fresh meat daily are delivered by motortrucks.
