**INDEX TO NEW ADVERTISEMENTS.**  
C. W. YATES—Look Boys  
WORTH, LEVY & CO.—Notice  
JAN WILSON—Stop and Think  
K. M. MCINTIRE—Summer Silks, &c.  
E. D. HALL, Mayor—State Exposition  
HEINSBERGER—Prang's Easter Cards  
S. L. FREEMONT—Terra Cotta Salt Glazed Pipe  
MEXUS BROS. & DE ROSSET—Easter Dyes

The storm signal was flying to-day.  
The receipts of cotton at this port to-  
day foot up 20 bales.

Mr. J. A. Springer, of this city, had  
ripe strawberries for supper last night  
grown in the open air in his garden.

There is an unmailable letter in the  
Postoffice in this city addressed to  
Harriet Headen, care of E. T. Moore.

Messrs. Daniel Shaw and J. H. Al-  
derman, of Pender county, were in the  
city to-day and favored us with a call.

We invite the attention of our citizens  
to the fact that first quality shirts are  
being made to order at one dollar at the  
Wilmington Shirt Factory.

Mr. Sol Haas, Traffic Manager of the  
Associated Railways, was in the city to-  
day, and accorded us the pleasure of a  
short visit.

Ger. barque Prospero, Krenzein,  
cleared to-day for Stettin with 3,765  
barrels of rosin, valued at \$5,050, ship-  
ped by Messrs. E. Peschau & West-  
ermann.

The North Carolina Presbyterian  
comes to us this week in a new dress  
and in a new form. It is now an eight-  
page and we think the change an im-  
provement.

### Exposition Meeting.

Mayor Hall has called a meeting of  
those interested in the proper represen-  
tation of our city and county at the  
State Exposition, to be held in the City  
Court Room to-morrow night, at 8 o'-  
clock. We trust that the meeting will  
be largely attended and that measures  
may be taken for making a handsome  
display of the products of this section.

### Pilot Boat Lost.

The pilot *Celia*, which Messrs A. M.  
Guthrie and Jas. Williams, two Smith-  
ville pilots, had recently purchased in  
New Bedford, Mass., was lost on  
Cobb's Island, on the Virginia coast,  
last Sunday morning. She was on her  
passage from New Bedford to Smith-  
ville in charge of Mr. Williams, with  
Mr. Guthrie and three other men on  
board and sprung a leak during a heavy  
Northwest gale on Saturday night.—  
For the safety of those on board she  
was beached on Sunday morning, but  
she drifted off and sank. The crew  
were rescued and cared for by the life  
saving station, but they lost all their  
clothing. The *Celia* was about 35 tons  
burthen.

Silver Plated Spoons, Forks and  
Knives of best quality, and at man-  
ufacturer's prices, can be found at JA-  
COB'S Hardware Depot.

### Police Report.

The police made 27 arrests during the  
month of March, and for the following  
causes: Abusing police officer while  
on duty, 1 colored male; assaulting po-  
lice while on duty, 1 colored male;  
sleep on the street, 1 colored male;  
disorderly conduct, 6 white males, 5  
colored males, 6 colored females; drunk  
and down, 1 white male; failure to pay  
license tax, 3 white males; felonious  
entry, 1 colored male; larceny, 2 col-  
ored males; throwing rocks in the street,  
1 colored male.

During the same month 16 white  
males and 6 colored males applied for  
lodgings at police headquarters.

Amount of court fines collected dur-  
ing the month, \$17.50. Pound fees  
collected, \$12.50.

During the month 16 places of busi-  
ness were found open by the police at  
night.

**The Mercy of the Hour.**

The reader who hears afar off of the  
celebrated Charity Hospital, nearly two  
hundred years old, learns with surprise  
that \$5 or even \$1 sent to M. A. Da-  
phin, at New Orleans, La., will procure  
a whole or fraction of a ticket in the  
next drawing (April 8th.) of the 16th,  
Grand Monthly Drawing of The Louisi-  
ana State Lottery Company, which  
gives \$1,000,000 as a guaranty for the  
support of that noble institution. The  
reader may get \$75,000, but that need  
not deter a real philanthropist.

The largest and best stock of  
Windows, Doors, Blinds &c., and at  
factory prices is at N. Jacob's Hard-  
ware Depot.

NO. 79

## CRONLY.

**Its Settlement—Growth—En-  
terprise—Prosperity—Pros-  
pects—The Acme Manufac-  
turing Company.**

Seventeen miles from Wilmington,  
in Columbus county, on the Carolina  
Central Railroad, where less than two  
short years ago stood a wilderness, is  
located the town of Cronly, and there  
are the works of the Acme Manufac-  
turing Company. This company have  
erected three large establishments at that  
place in which commercial fertilizers,  
pine straw fibre and oil, and cotton seed  
oil are manufactured. Each depart-  
ment is conducted in a separate build-  
ing, especially constructed and adapted  
to the business to which it is devoted,  
making three manufacturing establish-  
ments in all, each of which is 150 feet  
long by 50 feet wide and two stories  
high, with the exception of the cotton  
seed oil mill, which is three stories  
high for about half its length.

The ground for this enterprise was  
first broken on the 15th of December,  
1882, although the company did not se-  
cure its charter until April, 1883. The  
officers of the company are, Mr. W.  
Latimer, President; Capt. Henry Sage,  
General Manager; Mr. H. G. Lat-  
imer, Treasurer; and Messrs. Cronly  
& Morris, General Agents. The  
company started with a capital of  
\$150,000, although a capital of \$1,000,-  
000 is authorized by the terms of the  
charter. They own a tract of 2,500  
acres of land, on the surface of which  
grow unlimited forests of pines from the  
leaves of which the fibre and pine oil  
is made, and under which are inex-  
haustible deposits of phosphate rock, of  
every variety, and large beds of blue  
marl, such as has enriched the soils of  
New Jersey until that State has been  
made a garden spot of fertility. The  
factories are situated directly on the  
line of the Carolina Central Railroad.  
They give constant employment to  
about 100 men, who live in the village  
which has sprung up by the magical  
wand of capital in the well-directed  
hands of energy and enterprise. The  
location is very healthy, being on an ele-  
vated plateau, a short distance from  
Livingston Creek, a tributary of the  
Cape Fear. The village is regularly  
laid out in squares, and contains now  
about 90 houses, besides a store, a  
postoffice and depot, in which there is  
an office of the Western Union Tele-  
graph Company established. It is  
contemplated to build a church and  
schoolhouse at an early day, the  
grounds for which have been reserved  
and laid out.

The above is a brief outline of this  
important enterprise, its locality and  
the advances it has already made as a  
thriving, busy town which has sprung  
into existence in such a remarkably  
short space of time. We will now pro-  
ceed to describe more minutely and  
more in detail the different industries  
carried on at Cronly, and the process  
of their manufacture, beginning with the

### FERTILIZER ESTABLISHMENT.

This building is situated in the centre  
of the three factories, and it is to this  
that the thousands of tons of phosphate  
rock, with which the yard has been  
filled from the quarries, are brought.  
These rocks are of different sorts, but  
all possess valuable fertilizing prop-  
erties. Some are almost as hard as flint,  
while others are quite soft. These are  
thrown into a Blake Quarry Crusher,  
on the first floor, which is carried by an  
engine of 105 horse power, and whether  
hard or soft are made to crumble under  
the immense power which is brought to  
bear upon them. This crusher is capa-  
ble of crushing from 10 to 12 tons of  
rock per day. After being crushed the  
rock is conveyed to a drying furnace  
and then, by another elevator, to the  
second story, whence it is shot down to  
the atomizer on the first floor, where  
it is reduced to an impalpable powder.  
This being accomplished, the powder is  
blown by a current of air, through a  
tube, again to the second floor into the  
dust chamber; thence to the dust bin,  
whence it is taken and piled in heaps  
on the second floor to be used as want-  
ed. When wanted the dust, a quantity  
of kaint and cotton seed meal are taken  
to the mixing machine into which they  
are emptied and thoroughly mixed, by  
which process the mixture again reaches  
the first floor. Thence it is taken by  
elevator to the top of the second story  
and thence back to the second floor  
through a sieve by which any large par-  
ticles that may remain are excluded  
from the mass. Thence by elevator it  
is carried to the top of the second story,  
whence it is conveyed through a shoot

to the first floor and into the proper  
bags, all ready for market. The factory  
is capable of turning out about 10,000  
tons of first class fertilizers per annum.  
It is under the special charge of Mr.  
James Moran, who is well qualified by  
years of experience for the position.

### THE PINE FIBRE FACTORY.

About 50 yards West of the factory  
we have just described, and on a line  
with it, is the factory where the ordi-  
nary long-leaved pine straw is made  
into an excellent fibre for stuffing mat-  
tresses and other upholstery work.—  
This factory is supplied with a 60 horse-  
engine, and is under the charge of Mr.  
A. F. Scott, who is a Scot by birth, as  
well as a Scot by name, and who in-  
vented and constructed a large portion  
of the machinery used in this depart-  
ment, and made it, too, right there at  
the works. Aside from the manufac-  
ture of the fibre, as we have said, it is  
at this factory that the pine oil is ex-  
tracted from the pine straw. The oil is  
extracted while the process of mak-  
ing the fibre is in progress, as we shall  
presently describe. This oil possesses  
valuable medicinal properties and may  
be used externally or internally as  
occasion demands. It is used exten-  
sively for rheumatism, sprains, cuts and  
bruises with successful results and in-  
ternally it is efficacious in a variety of  
diseases. It is a powerful antiseptic.  
The factory is capable of turning out  
about two tons of the fibre per day,  
which would yield about four gallons of  
oil. The fibre is an excellent article for  
mattresses as vermin will not abide  
where it is, and, unlike jute, it will not  
decay with moisture, but will last many  
years and should it, by any accident,  
get wet, it will regain its elasticity upon  
being dried. The process by which the  
fibre is made and the oil from the  
straw is extracted is about as follows:

The pine straw, of which there were  
about 300 tons in the yard, is conveyed  
to the second floor by an elevator,  
where it is placed in large iron cylindri-  
cal tanks which reach nearly to the  
first floor. In these tanks it is subject-  
ed to intense pressure and the oil extract-  
ed. The straw is then put in other  
tanks filled with hot water and thorough-  
ly cooked so that it is soft, and it wash  
ed and cleansed of all foreign matter.  
From this it is taken to another machine  
which rubs it and works it until there  
are many strings to each particular  
straw. In fact, makes it into fibre.  
During all these processes it has been  
kept saturated with water, but it is  
next taken to the wringing and break-  
ing machine where the water is squeezed  
out and the curling process is begun.  
It is then carried to the carding machine  
through which it passes, and thence to  
the drying machine, where every par-  
ticle of moisture is evaporated, and  
thence to the press where it is put up  
in bales and ready for market. In all  
these various processes and machines  
through which the straw is made, from  
the raw material to the manufactured  
articles, it is carried by machinery work-  
ing automatically and without the aid or  
labor of the hands of man. The means  
employed are all apparently simple,  
such as any man of ordinary intelligence  
might arrange, but when taken with all  
the other machines, shows the work of  
a patient, thoughtful, calculating and  
ingenious mind, fruitful in expedients  
and skillful in combining them for the  
purpose of labor-saving expedition.

### THE COTTON SEED OIL.

Nearly East, on a line with and about  
50 yards from the fertilizer factory, is  
the factory where the oil is extracted  
from the cotton seed. The machinery  
of this establishment is run by a 60  
horse-power engine and the work is  
conducted under the supervision of Mr.  
Henry O'Neill, who has had many  
years of experience in this sort of busi-  
ness. Near the factory is the store-  
house in which are stored about 700  
tons of cotton seed ready for manipula-  
tion. From this storehouse the seed is  
carried by a screw conveyor to the  
factory, whence it is taken by elevator  
to the third floor to a revolving screen  
which clears it of all sand, sticks, stones  
or other foreign substances. Thence it  
is taken by another screw conveyor  
which discharges it to the linters on the  
second floor when whatever lint that  
may cling to it is taken off. Thence it  
is carried by elevator to the huller on  
the third floor, where the hull is taken  
from the seed, and from thence it is  
carried to another screen, where the  
hulls and kernels are separated, the  
former being conveyed to the fire room  
and the latter to the rollers to be crush-  
ed, after which it is conveyed to the ex-  
tractor, where the oil is extracted, by  
the aid of naphtha, with which it is  
mixed, instead of hydraulic pressure,  
as it was formerly done. The oil is

then conveyed to a still, where it is sepa-  
rated from the naphtha by distillation,  
and the latter is conveyed to a large  
tank, 22 feet square and 8 feet high,  
in which there is a mile and one-eighth  
of pipe, where it is condensed and  
ready for use again. The seed, after  
the oil has been extracted, is loaded into  
cars and conveyed on a railroad track,  
which has been constructed for the pur-  
pose, to the fertilizer factory, where it  
is utilized in the manufacture of fertiliz-  
ers, as we have described.

In all these manifold operations we  
have attempted to describe there is but  
very little manual labor, the chief part  
of the work being done by machinery.  
In conveying the different materials  
from one machine to another automatic  
appliances, working with the regularity  
and simplicity of clockwork, accom-  
plish the task. Mr. J. T. Most is in  
charge of the linting and hulling de-  
partment of the mill and is an experi-  
enced millwright. He is a skillful  
workman, and has in several instances  
wrought mechanical revolutions, but  
it must not be inferred from this fact  
that he is any relation to Herr Most,  
the political revolutionist, for he is not.

We have thus far endeavored to de-  
scribe the town of Cronly, with its in-  
dustries, growth and condition, as it is  
at present. What its prospects for the  
future are may be predicated from its  
remarkable growth in the few brief  
months since operations were com-  
menced. The work is not yet finished;  
it is but comparatively just begun.  
None of the factories are entirely com-  
pleted. Everything is new, and with  
the exception of a few dwellings, every-  
thing is incomplete. Improvements are  
constantly in progress; new dwellings  
are in course of erection and new ar-  
rivals are being added to the families  
already there. It is a new enterprise,  
a new place, inhabited by a new peo-  
ple, yet it has its traditions of the  
past, which are believed and repeated  
by some of the old colored people who  
live in the vicinity. The principal of  
these echoes from the past is the ex-  
istence of a

### MALE AND FEMALE GHOST.

Of these, the legend is, that the male  
ghost was an old planter when he was  
here in the flesh and that he was very  
cruel to his slaves. He was a hard  
worker and hard master and during  
the week he was so much employed  
that he had no time to devote to the  
punishment of his wayward colored  
people, but on Sundays he would call  
them up and flog them indiscriminate-  
ly as a sort of devotional exercise.  
This cruelty became a torment to him  
after death, and his spirit is denied  
rest but is continually riding about the  
country on a ghostly mule cutting at  
ghostly slaves. The other ghost is that  
of an old woman who, during the revolu-  
tionary war, buried an old stocking  
filled with gold, and forgot where she  
buried it, and her spirit now wanders  
around the vicinity in a vain search  
for the buried treasure.

Mr. John H. Francis, 68 Maiden Lane,  
New York, sole agent for Orrick's Cele-  
brated Vermorel, the best of its kind  
in the market, says: "thnt in his ex-  
perience of over twenty years, he has  
never sold anything with such favor-  
able good results, as St. Jacobs Oil, the  
great pain-cure."

### City Court.

The following cases were disposed of  
by the Mayor this morning.

Mary Eliza Lively, colored, disorder-  
ly conduct, \$10 or 30 days. She went  
below.

Victoria Collins, colored, drunk and  
down, \$5 or 20 days. She also went  
below.

### Sent to Bladen.

Wayman McKay, the colored fugitive  
from Bladen justice, who was arrested  
a few days since, was fully identified by  
the officers who were sent for him, and  
he was promptly surrendered to them  
and was taken back to Bladen county  
where he will be furnished with com-  
fortable quarters in the jail until it is  
time to investigate his case by the  
Superior Court.

### Harbor Master's Report.

The following were the arrivals of  
vessels at this port during the month  
ending Mar. 31st, 1884:

American—Steamers 7, aggregating  
5,837 tons; 1 barque, 283 tons; 19  
schooners, 5,843 tons, making a total of  
American of 27 vessels, aggregating  
11,023 tons.

Foreign—Barques 9, aggregating 3,-  
424 tons; 1 brig, 229 tons; 3 schooners,  
394 tons, aggregating a total foreign of  
13 vessels and 4,043 tons, and a grand  
aggregate of 40 vessels and 16,066 tons.

Now is the time to give Smith's Worm  
Oil.
