Watering Horses

A writer in the National Lice Stock Journal says that reold water taken before eating acts as a tonic in the came manner that going from a warm room into a frosty atmosphere acts as an invigorator upon the whole system reason he recommends giving horses a drink of cold water before feeding them believe that horses will cal their food with more relish if given water first, hata, but they should always be offered water after feeding as well. This matter of watering animals, and especially horses. is not so well understood as a should be, and there are many persons who appear to think that if a horse gets off the water he will drank, at stated times during the day, it is sufficient; but House square, New York, a section of horses are not always thirsty just whom it is most convenient to give them a drink, and for this reason that small be allowed to choose their awn time, that a process has been invented for except, pernaps, when heated through violent exercise.

Green Rye for Milch Cours.

Mr. I. D. G. Nelson, Fort Wayne, Ind., writes that he dom-instrated, during several years' experience, the value of green tye for spring feed for all stock, except milch cows, having raised annually litteen to twenty acres. and it was not entil be fearned the great usefulness of orchard grass for the same purpose that he abandones the old stand-by. "Therefore," he says, "I must repeat what the suited experience of the household was that milch cows must be kept from the rye. as it imparts a very unpleasant thavor to the milk and butter. There is some ground for the differing opin one. In the neighborhood of large cities winter rye is often raised for fostingmilch cows in early spring, squettines with and sometimes without any complaint of its affecting the flavor unfavorably. When growing very rank and getting a little too mature, very liberal rations of it are apt to have milk a little strong. Green cats following der corn, or green theor, will destin same thing when fed too freely, but do not affect the milk quite so readily. perhaps, as two at a certain stage of maturity. Rye, when not overgoeen, and fed in moderation, is estimated by the great majority of feeders as an excellent andk-producing tood, and is so recommended by authorities such as Mr. Flint, in his "Malch Cove and Chary Farming," and Prof. E. W. Stewart, in his recent work on "Feeding Annuals" Prof. L. B. Armit.

much more valuable to the farmer than α so which is time, indexing be sold at one which is fertile only by the help of α according to all for above that less than manure. The initial fertility of the common pane lamber. It will take soil, comparatively speaking is a per, any initial and in this respect alone is manent quality, and can only be layared equal to the firest hard word. Moreby the continuance of an exhaustive over it can be marbleired in initiation system of cropping for a long-time.

Acquired fertility is quite a different matter; it is due to the accumulation of majority in the soil, which may be reduced or entirely with the soil of the soil of the soil of the soil of the soil initiation of grain. It will not warp which may be reduced or entirely with

There seems to be little doubt that the germ of yellow fever has been discovered at Rio Janeiro by Dr. Domingos Friere. The British foreign office has sent out a paper on the subject. It comprises the report that the microbes of yellow fever have been taken from earth, propagated apart from any living subject, and then made to reproduce themselves in guinea pigs. The doctor goes on to say that the discovery of a preventive is not impossible, and that some encouraging results in this direction have already been obtained by him, he having succeeded in attenuating the microbes by saw him custom win, that man behind a method of his own. Two guinea the counter stood and raked the shekels. Pigs were vaccinated with the culture of those organisms, and although their temperature rose, they resisted the and saw his fortune rising, he took a innoculation.

He who betrays another's secrets be cause he has quarreled with him was and demonstrate full plain, the more never worth the sa red name of friend; one pays for printer's ink the greater a breach of kindness on one side will not justify a breach on the other.

Looking Out the Back Door.

A friend of ours wished to hire a farmer for a wealthy neighbor, and we mentioned one who was wanting an engagement. Knowing that our friend had been to see this farmer, we asked the result. His reply was, in substance,

"Yes, I went there; I went around to the back door and came away, knowing that he would not suit."

The front doors of many farm-houses are rarely opened. The back door is in constant use. One need not go far in any locality, to find the outlet of the kitchen sink ending in a sort of ditch, which is supposed to carry off the waste water, but which only allows it to soak away and saturate the ground near the back of the house. The sel-dom used front door is opened when a small coffin is to be taken out. The minister species of 'the mysterious dispetestions of Providence.' They are not all mysterious. Bad sink drains at the back, of the house are sure to bring typhesid tever and other sickness. Let the back door surrounding be looked to. It nothing better can be done, carry the kitchen wastes to a cesspool a distance from the house, where they can seak away far below the surface. Problet all throwing out of slops at the back door. The ground seen becomes charged with matters that ferment and breed disease. Where pigs are kept—and that includes every farm—there should be a pail to receive all animal and vegetable matter and daily emptied. Nothing of the kind should be thrown out at the back of the house. Where there is such a disease-freeling sink spout as we have mentioned, let provisions be at once made to carry off the water to a resspeci, and cover up the saturated a crosspool, and cover up the saturated a crosspool, and cover up the saturated a rose-spool, and cover up the saturated a crosspool, and cover up the saturated from made to carry off the water to a resspool, and cover up the saturated a crosspool, and cover up the saturated a crosspool, and cover up the saturated from the army and Navy Journal, Commander J. B. Coghlan, U. S. N., states that the consultations of eminent may all and other surgeons, respecting his rhounder and a saturation of the same should be a major that the consultations of eminent may all and other surgeons, respecting his rhoundard and the surgeons and surgeons and continued to a south every subject to the same of the surface of the surface and and other surgeons, respecting his rhoundard and the surface and as he says, wonderful cure. John Carr Moody, Esq., lawyer at Vallep, Cal, was like wite minister speaks of "the mysterious dispensations of Providence." They are not all mysterious. Bad sink drains

POFFICTY AND DISTRESS.

That poverty which produces the greatest distress is not of the purse but of the bless! Deprived of its richness it becomes scant and watery, a condition termed avesage in medical writings. Given this condition, and serofdious swellings and sores, general and nervous debitity, loss of flesh and appetite, sead large, thout disease, spitting of blood and consumption, are among the common results. If you are a sufferer from thin, poor latout the product of the
