We eat too much and take too little out-door exercise. This is the fault of our modern civilization. It is claimed that Ayer's Sarsaparilla, a simple herb remedy, helps Nature to overcome these abuses.

When one woman praises another, folks think she is sarcastic.

FOR THROAT DISEASES AND COLDS use BROWN'S BRONCHIAL TROCHES. Have been tested by good things, they are unrivaled. For sale only in boxes.

A first-class clerk.—The Dentist.

Mr. Geo. B. Cook

Like a Waterfall After the Grip

Tremendous Sensation in the Head—Pain in the Stomach.

"Two years ago I had a severe attack of the Grip, which left me in a badly debilitated condition. I had another attack and was confined to my bed for nearly six weeks. I tried all the time, had no appetite, had dizziness in the head, had disagreeable feelings, like a waterfall in my head, and

Severe Sinking Pains

in my stomach. I got so weak and nervous that I could scarcely walk across the room without staggering. I was completely prostrated. I tried all the time, but could get no relief. I was induced to try

Hood's Cures

and before I had taken one bottle I felt better. I have taken three bottles, and the effects of the Grip, the dizziness, the waterfall in my head, the pain in my stomach, the nervousness, the prostration, and the sinking pains have entirely disappeared. I am now in good health, and can recommend Hood's Sarsaparilla to all who are afflicted as I was." GEO. B. COOK, Cashier Merchants' Bank, Lowell, Mass.

Hood's Pills cure Biliousness, Jaundice, Sick Headache, Indigestion, Constipation. 25c.

Dr. Kilmer's

SWAMP-ROOT

Mr. H. Wood

Acted like Magic!

Suffered Years with Kidneys and Liver.

LIFE WAS A BURDEN!

Mr. Wood, well known and highly respected in Binghamton, N. Y., and vicinity, writes:

"For years I suffered with Kidney and Liver complaint, nervous prostration and poor health. I was ill a long time and employed the best physicians, but they all failed to help me. I found no relief in Swamp-Root and finally concluded to try it. It cured me entirely and I am now a well man. It acted like magic, and is the greatest remedy in the world. I make this statement voluntarily, without any solicitation, hoping that others may be benefited as I was."

SWAMP-ROOT

"August Flower"

I had been troubled five months with Dyspepsia. I had a sickness after eating, and a heavy load in the pit of my stomach. Sometimes a deathly sickness would overtake me. I was working for Thomas McHenry, Druggist, Allegheny City, Pa., in whose employ I had been for seven years. I tried August Flower for two weeks. Its use relieved all trouble. I can now eat things I dared not touch before. I have gained twenty pounds since my recovery. J. D. Cox, Alleghany, Pa.

Cures Sick Headache

FOR FARM AND GARDEN.

FEED FOR HORSES.

Oats is the standard feed for horses for home and muscle; corn adds fat; grass in summer and hay, roots, or meal and a variety of feed give the balanced ration to develop the growth of form, facilitate digestion and to realize the best results from the food value and maintain the health and vigor of the young horse for early maturity or hard work in the team.—Western Agriculturist.

TRANSPLANTING WOOD SEEDLINGS.

It is quite common for farmers who live near forests with young and thrifty underbrush to take to the woods for specimens needed for ornamental planting. Unless extra care is given such seedlings they rarely make a vigorous, handsome growth. Almost invariably these trees have long, sprawling roots, that cannot all be dug up, and however stunted the top may be, it is disproportionately large. To cut back the top so as to have half enough vigorous buds is the only way to succeed. Some cut off all small top growth, thus forcing new buds out from the trunk, but this takes more time, and the buds are not distributed so evenly as they may be if a few original ones are left.—Boston Cultivator.

CARING FOR THE MANURE.

Many successful farmers cart out the manure, as made in the winter, upon the fields where it is to be used. They name the following advantages: The farm is kept free from foul odors, which assists much in keeping the family in good health. The labor is done at a season when there is ample time, and consequently the carting is relished. The manure, being on the fields when wanted, enables one to plow the crop earlier than he otherwise could. The fields across which the manure is carted are not so badly injured in the spring. Though there may be a slight waste of some of the volatile elements escaping into the air, the waste is not very great because the manure heaps are frozen so as to preserve the greater part of this. On the most, allowing the waste to be as great as any one claims, the advantages greatly outweigh the disadvantages. The farmers of our acquaintance who do this are generally very successful ones and are training a useful class of their children.—American Agriculturist.

COWS MILK TOO MUCH.

I have had more than sixty years' experience in the use of milk and believe it to be almost a perfect food, and admirably adapted to promote the growth of weanlings of all animals during their first year at least. In feeding hens, chickens, puppies, children, pigs, calves and colts, I have considered milk food for which they show a preference according as best adapted to their needs, and I notice almost invariably they will leave other food for milk. I think nothing else on earth so good for them. How pigs and puppies and all other weanlings will grow on milk as a supplementary food! Our colts are feeling remarkably fine on 3 quarts oats and 3 quarts skim milk per day. They will leave their oats any time to get a drink of milk. All horsemen in this vicinity, so far as I am aware, feed milk to their weanlings. In closing I will give one episode. During the first [illegible] months, from November to June, colostrum gained about 70 pounds per month; when his milk was dropped his gain was about 27 pounds per month. One query. Isn't it possible to grow a colt larger than any of its progenitors if you give him plenty of milk?—[Turf, Farm and Home.

TO SET A SAW.

Secretary Rusk has received from Dr. Salmon, chief of the Bureau of Animal Industry, a report on the experiments and investigations being made in Chicago in the treatment of cattle for pleuro-pneumonia or slaughter. The report concludes that the hypodermic treatment of potassium is a remarkable success, 65 per cent. of the cattle there treated having been cured. The greater part of these were very seriously affected when taken for treatment. The report shows the cost of treatment to be trifling by comparison with the results, and it is also proved that the disease is not contagious. A herd of healthy cattle having been confined in close quarters with the disease for three months without showing any signs of being infected. The report severely arraigns the live stock commissioners of the state of Illinois for what it regards as arbitrary and inconsistent rulings by which grave losses which have been inflicted upon stockowners seeking a market for their stock in Chicago. As cattle have been condemned without proper appraisement and the owners have not received fair compensation from the commissioners. Dr. Salmon charges unjustifiable interference on the part of the commissioners with the experiments of the bureau.—[St. Louis Republic.

PERMANENT HAY.

In making a compost for manuring grass land, bulk is quite as necessary as quality. The soil needs to be filled with organic matter, and the more liberal this is applied the more effective the compost will be. Thus, five tons of swamp muck is a small quantity to spread over an acre of land, and twenty tons would be better, and this would be more effective if applied at the first than if given in repeated small quantities of five tons yearly for four years. This is so for the reason that it is not quickly decomposable and solvable, and time is required for the result. It is otherwise with the more solvable fertilizers, as nitrate of soda, sulphate of potash, or dissolved bones, or superphosphate of lime. These may be applied each year with advantage, and whatever surplus may be left in the soil after the crop has been fed will remain for the next year. For fifty pounds of nitrogen 350 pounds of nitrate of soda may be used, and this is an excessively large quantity.

One hundred pounds of this fertilizer is usually considered sufficient, but if raw bone finely ground is used, this will afford all the nitrogen needed. Four hundred pounds of the bone will supply 16 pounds of nitrogen, and this is as much as is contained in 100 pounds of nitrate of soda. This bone will also contain nearly two pounds of phosphoric acid, leaving only the potash to be added. As two tons of hay contain about 80 pounds of this, it would require four pounds of sulphate of potash, or four of the muriate to supply this. Thus, with 20 tons per acre of compost of swamp muck with lime given at first, and the bone and potash supplied every year, any good grass land should yield two tons of hay yearly for several years by the expense of good care during that interval. Of course, something depends on the kind of grass and the manner in which the land is sown down and prepared for it. Timothy and clover should yield this quantity at least.—New York Times.

FARM AND GARDEN NOTES.

One must feed as well as warm according to the thermometer.

Don't allow the milk to stand long before it is strained into the deep cans.

An increase in the cotton-seed part of the ration will be a guard against the effect of very cold weather.

Sometimes when the heifer won't come in time a little fine salt thrown on the clover will bring it promptly.

If you only turn your cows into the yard occasionally select days that are sunny, mild and free from high winds.

A cow kept for a week in a warm stable is not well fitted to enjoy herself in a cold yard with the mercury hovering above zero.

If you have but two or three cows and it takes more than three days to get enough cream to churn, add some milk to the cream to increase its bulk.

When vegetables are stored in the cellar, milk, cream and butter should be removed, as they will absorb any odors from vegetables to an extent sufficient to spoil their taste.

Don't forget that butter grains washed in water too cold will make crumbly butter; the remedy is to wash the butter in water warmed to sixty-two or sixty-six degrees.

An ingenious Eastern planter who wished a mulch for his strawberries sowed oats among them, and as the frost killed the oats, it made a fine ornamental covering for the strawberry bed.

It is an excellent plan to note down in a small book changes as they suggest themselves which you wish to make in your garden next summer, for when the time comes they may be forgotten.

It is said that a new substance is being made from the potato called the dried pulp. It is used mainly for feeding cattle. The potatoes are ground, and the pulp after being pressed is saved and dried in a furnace.

As valuable allies in insect warfare, many good words can be spoken of the mole and shrew. They are both good insect destroyers, and although they frequently do some harm, the good they accomplish more than counterbalances the evil.

Locomotive Building.

Not as many locomotives were built in this country last year as the year before. The Railroad Gazette has reports from 15 companies which built 1882 locomotives. Year before last 15 companies built 2300 locomotives. As three companies reporting in 1891 do not report in 1892, the figures are not comparable, but 12 companies which report for both years show only 1703 locomotives built in 1892, against 1963 the year previous. The year 1890 was the year of maximum product in locomotive building up to date. The car builders tell a different story. Forty-two companies reporting for both 1892 and 1891 built 77,620 freight cars in the latter year and 90,340 in the former. In car building as in that of locomotives 1890 was the maximum year as to product, 103,754 cars having been built, exclusive of those turned out from railroad shops.

QUAINT AND CURIOUS.

More than 100,000,000 people speak English.

It is said that the yew tree sometimes attains an age of 2800 years.

A bear weighing 715 pounds was killed recently near Hood's Canal, Wash.

An Indian girl student at the Haskell (Kan.) Institute is named Jenny One Feather.

A coyote was recently killed while leisurely walking down one of the principal streets of Pendleton, Oregon.

In the Twelfth Century a hook was attached to a footman's spear to enable him to drag a knight from the saddle.

Lord Bacon gave the world some excellent culinary receipts. One of his papers give nine methods of making mince pies.

The first man to eat tomatoes was the late Harrison W. Cooper, and they were sold at 25 cents per can. This was in 1848.

It is said to be possible to cut down a growing tree and make it into paper ready for the printing press within twenty-four hours.

In some parts of China a formal introduction is given in these words: "This is my friend. If he steals anything I will be responsible."

Iceman during the winter declared that men could see to read a newspaper through the clear ten inch ice in the Hudson River near Poughkeepsie, N. Y.

A Maryland woman entertained three guests some time ago, strangers to her and to one another, named Mrs. Sprinkle, Mrs. Shower and Mrs. Storm.

The fan is a Chinese invention, and was brought to Western Europe by early Oriental travelers as one of the most interesting products of the land of Cathay.

The custom is universal in Madrid, Spain, of having one of the two outer doors of the house when a person dies. The door is kept closed for a novena, or a period of nine days.

What is supposed to be the longest beard in existence is attached to the chin of the French sculptor, Louis Fabon of Montmorin. It measures 7 feet 6 inches in length and is still growing.

A glass factory at Liverpool has eighteen hundred boxes for all its machinery, a glass floor, glass shingles on the roof and a smoke-stack 100 feet high built wholly of glass bricks, each a foot square.

Dwight Ware of Hyde Park, Penn., took his valuable bull terrier to a dentist. Ether was administered, the cavity of a tooth drilled and gold filling put in, and the dog was at once relieved of pain.

The Supreme Court of Massachusetts is to be asked to settle the question as to whether a man has a legal right to smoke opium, an appeal from a conviction for opium smoking in Boston having been taken.

Facts About Gray Hair.

Many persons begin to show gray hairs while they are yet in their 20's and some while in their teens. This does not by any means argue a premature decay of the constitution. It is purely a local phenomenon, and may co-exist with unusual bodily vigor.

Many feeble persons and others who have suffered extremely, both mentally and physically, do not blanch a hair until past middle life, while others without assignable cause, lose their capillary coloring matter rapidly when about 40 years of age.

Race has a marked influence. The traveler Dr. d'Aubigny says that in many years he spent in South America he never saw a bald Indian and scarcely a gray-haired one.

In the United States sex appears to make little difference. Men and women grow grey about the same period in life.

In men the hair and beard rarely change equally. The one is usually darker than the other for several years, but there seems to be no general rule as to which whitens the first.

The spot where grayness begins differs with the individual. The philosopher Schopenhauer began to turn gray on the temples and consequently fancied a theory that this is an indication of great mental activity.—[New York Recorder.

Wonderful Mechanical Kittens.

A most wonderful mechanical toy has been on private exhibition in Paris lately, and it is understood that efforts are to be made to secure the curiosity or curiosities for the Chicago exposition. This remarkable piece of mechanism consists of seven life-sized kittens covered with real skin, but with eyes of emeralds set in white enamel. Each kitten is provided with some musical instrument, such as a flute, a zither, a violin, a drum, a harp, a cornet, an accordion, all perfectly harmonized. With these the kittens play the most difficult pieces of music, operas and such. The mechanism is similar to that of a common music box, and the whole apparatus, kittens, etc., is valued at about $4000. The curiosity is even reported to be insured for $2400.

How He Finished His Declamation.

An Amherst graduate, a night or two ago, in a reminiscent mood related the following story of school days to some friends:

"Good old Doctor B. had the somewhat discouraging task of training us to become the country's future orators. We always called him 'Prexy Rhetoricals.' He was an eccentric old fellow, and had a habit of cutting our weekly declamations short that he might go home early in the afternoon. We never could know when one of us might be cut off in the most eloquent part of some stirring bit of oratory with the stereotyped remark—'Very well done, next!'

"Tom Cotting was the most promising member of the class for the oratorical laureateship. One afternoon when 'Prexy' was in a greater hurry than ever to finish declamations, Tom held us spellbound by a masterly rendering of the speech of 'Spartacus to the Gladiators.' Just as he was launching out his defiance of the Roman tyrants 'Prexy' cut him off in the usual way.

"Tom, the next week, when his turn came, mounted the platform, and making a most profound bow carelessly remarked:

"'As I was saying last week when I was interrupted, after Spartacus,' and then he launched into the remainder of the speech. 'Prexy' was speechless, and that afternoon and for several afterward the boys were allowed to finish their pieces without interruption."—Boston Globe.

Curious Death Customs of Fiji.

The Fijians believe that in case a marriageable youth or maiden dies without having gone through with the elaborate nuptial knot-tying ceremony of the islands his or her soul is doomed to wander about forever in an intermediate region between heaven and the lower regions. When anyone dies, man, woman or child, a whale's tooth is placed in the hand of the corpse, the missile to be thrown at the tree which stands as a guide post to point out the road that leads to heaven and the one that leads to shoe.—St. Louis Republic.

The Sultan of Turkey has ordered a competitive trial of Krupp and Cail cannon. The latter are used by the French army, and the Ottoman army has been using the former.

The Power of Water.

"A Southern Engineer" contributes a valuable article on "Geology and the Mississippi Problem" to the Engineering Magazine. In it he says:

We find in water the only tireless agent that works in the modification of continents; and instead of being the great renovator of the land, as it is popularly conceived, it is the great destroyer. The destruction of ancient Rome has been attributed to time. But it was due simply to the moisture of the atmosphere working through chemical agencies. It was water, invisible but penetrating even the very stones of the wonderful city, that caused her to crumble to ruins, and gave to modern Rome a grade greatly elevated above her ancient grade. But it works not alone in the cities and towns. There is not a hill on earth that has not been shorn of some of its altitude by this subtle force, and there is not a mountain on earth, if not fitfully renewed by volcanic action, that has not been compelled to lower its peak before this universal leveler of the exalted. It may be a dreadful thought, indeed, but we do not know absolutely that we are not dependent on the earthquake and the volcano for keeping our continental habitat above the level of the ocean; for water not only destroys, but it has the persistency and force to carry off to its burial place in the sea all that it has caused to perish. It may take a long time at its task, but working either in its gaseous, its liquid, or its solid form, it seems to be the most persistent thing on earth, never perishing, and, however divided and invisible at times, always ready to unite its forces for a supreme effort at the degradation of a continent.

Still Bright and Booming.

A publication brimful of solid advice and the raciest bits of fun, original and copyrighted, from the pens of such noted humorists as Bill Nye, Space, E. Read, Danbury News Man, etc., in the St. Jacobs Oil Family Almanac and Book of Health and Humor, 1893. It is a free gift at the Druggists' counter. The work differs somewhat from its former editions, but is none the less attractive and in many of its features is the superior of former numbers. One special feature is the "Offer of One Hundred Dollars" open to all contestants, the offer being that a perusal of the book will fully convince. The Almanac is sent forth by The Charles A. Vogeler Company, Baltimore, Md., proprietors of some of the best known and most reliable medicinal preparations. A copy will be mailed to any address on receipt of a 2-cent stamp by the above firm.

England has revived an old law against swearing.

"Each Spoonful has done its Perfect Work,"

Is the verdict of every woman who has used **Royal Baking Powder.** Other baking powders soon deteriorate and lose their strength, owing to the use of inferior ingredients, but **Royal Baking Powder** is so carefully and accurately compounded from the purest materials that it retains its strength for any length of time, and the last spoonful in the can is as good as the first, which is not true of any other baking powder.

A Testimonial Worth Reading.

MT. STERLING, KY., FEB. 13, 1890.

I desire to make a brief statement for the benefit of the suffering. I had been afflicted with catarrh of the head, throat and nose, and perhaps the bladder for fully twenty-five years. Having tried other remedies without success, I was led by an advertisement in the Sentinel-Democrat to try Hall's Catarrh Cure. I have just finished my fourth bottle, and I believe I am right when I say I am thoroughly restored. I don't believe there is a trace of the disease left.

Respectfully,

WM. BRIDGES, Merchant Tailor

BEWARE OF FRAUD.

Ask for and insist upon having W. L. DOUGLAS Shoes. None genuine without W. L. Douglas name and price stamped on bottom. Look for it when you buy. Sold everywhere.

W. L. DOUGLAS $3 SHOE FOR GENTLEMEN

A sewed shoe that will not rip; Calf seamless, smooth inside, more comfortable, stylish and durable than any other shoe ever sold at the price. Every style. Equals custom-made shoes costing from $4 to $5.

The following are of the same high standard of merit:

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by Druggists. CONSUMPTION 25 CTS.

We offer you a ready made medicine for Coughs, Bronchitis and other diseases of the Throat and Lungs. Like other so-called Patent Medicines, it is well advertised, and having merit it has attained a wide sale under the name of Piso's Cure for Consumption.

It was a "Notion," though at first it was compounded after a prescription by a regular physician, with no idea that it would ever go on the market as a proprietary medicine. But after compounding that prescription over a thousand times in one year, we named it "Piso's Cure for Consumption," and began advertising it in a small way. A medicine known all over the world is the result.

Why is it not just as good as though costing fifty cents to a dollar for a prescription and an equal sum to have it put up at a drug store?

MEND YOUR OWN HARNESS WITH THOMSON'S SLOTTED CLINCH RIVETS.
