An Artificial Sen.

The sun need to be cited as an example of a work of Nature with which it was useless for man to try to enter into competition, says the San Francisco Examiner. But at the present rate of progress we shall be making contracts within a few years for lighting eitles by electricity in the daytime, to secure something better than the unsatisfactory solar illumination. A termon from has a search-light on exhibition at the World's Fair that projects a beam of 180,00,000 candle power. It is stated that if this little stuly amp ware placed at a sufficient at the unit of the students. placed at a sufficient attitude it would furnish enough light to read by at a distance of a bundred indies. In other words, if the light were set on Mount Diable the people in the feet biles of the Sierras could sit on their perches and read by the rays it would send across to See Light and the set of the see Light and the see Lig

Diable the people in the feet halls of the Sieras could sit on their proches and read by the rays it would send across the San Juagun to be.

It is asserted but if this light were turned in a man's face at a less distance than several intes it would not stantly blind in till him by the shock. That statement appears to be subject to discount. The san does not kill, or even blind, a man when it shows in his face, and if an artificial light can feet, the sun must be already a back number. It the derman project is were really as deally as represented there would be a revolution in warfare, and instead of washing aminumition on an enemy the commander of a garrison would now down the heatile ranks by awceping them with his search light. But it seems probable that the new condenser would be able to make its beam visible from the mone, so that if there were any limal tanks there, and they had altered to be lone as far as we have if we all the same with them by a subject and they had altered to be for any far as we have if went had account on the same that they had altered to be not seen for a section of years ago before man had appeared upon our world, and terriance in their time thow had their Moon's hairs and turned their world, and terriance in their time thow had their Moon's hairs and turned their cear he lights upon the arrived waste whose beaps of descenated benesies on reply. turn ours up a the larren waste whose heaps of desiculted benes give no regig.

TA little maid's prayers are usually simple, sweet, and teaching," said a prominent United States official, lift! know of one pracer made by a lift!e ss which is humorous and well with the telling. She was taught by her mother to go through thingst to be hold; to be threeful for filling that is, the pracess she was in the hald; of saying and to add any special peritions suggested by her needs at the time. On one occasion she was ill and suffering some pain and considerable in onvencence from nauses, and her simple prayer at the end of the regular vesper offering was. Oh Lord bless poor little Em and make her well, for who wants to be frowing up all the time? St. Louis Republic.

FOR FARM AND GARDEN.

EFFECT OF GRASSES ON WOOL, Coarse, rough, wild grasses have been known to change the quality of Merino wool in a few months. On the contrary, the tine, soft, sweet grasses have always improved the coarserwooled breeds of sheep. The wool market reports show a difference of value in the wools of the same grade of sheep from different sections. For icuce rather than from equity, the trade classes these domestic flerces by states at present, and always have done so. It is worthy of note that these arbitrary gradings have been greatly modified and are continually tending to higher grades and values It is said that western and prairie fleeces are dirty, gritty, and string so builty in sconging as to reduce their price; and as lands are closely grazed and become set in better grasses, a soil is formed that keeps the sheep's feet from the soil and less dust raised to settle in the florers, and so florers are eleaner and lighter - American

Only a will pay well for the cost and trouble,

think I have never gathered as much cream from the same quantity of milk under other circumstances. The "gude man" affirms that "the cows are the same as formerly, and have not received as good rations as usual." Directly after the milk was skimmed it was emptied from the pans into a large vessel and placed in a warm room; quoting from the "gude man" again "it was turned over and skimmed on the other side," and in twelve hours yielded a supply of cream for coffee, soups, and gravies. Many affirm that this second rising is counterfeit cream, and will not churn into butter, but I can testify that it is a very neceptable article for the cook. Doubtless many writers on dairy matters will say these experiments were very superficial, and their results unreliable and of little practical value, but make a note of them, my rural sisters, for future experiments and satisfy yourself regarding them.

Into the first skimming of cream put half a teacupful of sait and a heaping tempoonful of pulverized sult poter to every gallon of cream when churned. Salt causes cream to yield butter more readily and retards acidity. This quantity will not make the butt mulk too sait for culimary purposes. ning latter in winter, and gives batter a firmer texture in the summer It also nots us a preservative in the butter. I find some excellent butter makers are putting white sugar in butters some use half as much sugar as quality of east and imparts a pleasant theor. I've people on small farms have ice, but nearly all have plenty of cold water. With neither we nor cold water good butter cannot be made in warm weather. Put a strong bail on fore charmon. Willie-"They are with the Jamaics ginger that was in the closet." -- New Just Sor Just So.

Jost Ser Just No.

The subtle line dividing genius and Insanty is so delicate that in many instances it cannot be defined, it can only be felt. I yen the deep researches of physiological-psychology are unable to designate principles on which the judgment can depend for logical deductions on the subject, and the searching analyses and arguments of many cradite students and philosophers are as incomprehensible and meaningless to the ordinary mind as the vain vaporings of a mind unhinged.—New York Mail and Express.

A Sugar-Coated Pill.

A good example of the extremely courteous in public correspondence was the notice sent to tharies and Fox that he was no longer a member of the government of George the Third. It read thus: 'His gracheus Malesty has been pleased to Issue a Majesty has been pleased to issue a new commission, in which your name does not appear."

A Beautiful Wood.
One of the most beautiful woods
ever made into furniture is the comino wood of South America. The
wood, which is very rare and therefore very expensive, is of a medium golden brown, very brilliant in appearance, and with curious cloud-like markings. A plane of this wood tolaid with ebony, satinwood, mahogany,tortoise shell, and mother of pearl, is valued at \$10,000. A second plane, nearly as valuable, is of curly birch dyed a light green and combined with comino word. The top of the piano case is iniaid with representations of musical instruments and with the names of musical composers. The music rest is a rare painting of the muses. A bench of the same wood, made with infinite skill, goes with this plane to be used instead of the everyday music stool.

The youth of the soul is everlasting.
