acre has been secured by the Division of Agronomy of the State College Experiment Station in its tests with seed corn selected from the field as contrasted with seed obtained from the crib. In some cases the increased yield was as high as eight bushels per acre with the same variety. This in itself proves that it pays to select in the field, the seed corn for next year's planting, state the agronomy workers.

Seed carefully selected in the crib next spring is better than no selection at all because poor seed results in poor stands, waste of land and labor and in low yields at harvest. Agronomy workers advise that before the corn is cut for shocking or before it is gathered, go into the field and secure more than twice as much as will be needed for next year's planting. The grower needs to get his as will be needed for next year's planting.

The grower needs to get his seed ears from the kind of stalks that he would like to have growing in his fields next year.

When the desired amount has been secured, the ears should be stored in a place where they will be dry and free from rots and weevils. Some good farmers hang their seed ears by strings or wires from the rafters and others use tight bins. Next spring, the best of these field selected ears may be used for seed and the remainder discarded. It is also wise to make a germination test before planting to be sure that a good stand will be secured.

Where seed corn is carefully selected in the field each year and a good seed patch is planted to supply the needed amount of seed for the entire farm, yields will be improved and the corn will more nearly pay for the time, labor and fertilizer used in growing it, say the agronomy workers.

ARE YOU A GOOD CITIZEN?

No man or woman is a good citizen until they may have benefited their time by their work.

To determine for betterment to promote progress and decency these are basic principles of patriotism.

No person is a good American because they may be orderly—that much is expected—he has not fulfilled his responsibilities until he has determined to make it an obligation to help improve the standards that he found waiting for him.

Because one observes the law, pays taxes, liquidates debts and contributes occasionally to charity, and votes "the straight ticket" is no criterion that he is a good citizen and the peer of a neighbor.

The neighbor might not be the peer of his own traditions. The neighborhood itself might be indifferent. The community is probably apathetic in many ways and probably found wanting.

"He could have sold his honor, but he chose

To garb his soul in clean resplendent robes,
And wear his thread-bare patches on his clothes.

He held his manhood stalwart to the end,

He hungered, but his conscience never starved.

He kept the faith with self-respect and friend."

O. P. TIMIST.

OUR HALL OF FAME

The Farmer runs second to nobody in importance because he raises food, and without it none of us would be important long. Farming is the oldest vocation and one of the most dignified, but the farmer works hard, and when he has earned enough to retire, nobody begrudges him his well-deserved rest.

Sir Charles A. Parsons, an English engineer, proposes to dig a hole in the ground 12 miles deep, to see what kind of minerals he can find. Would take 50 years to dig it.

BIG CONFERENCE ON WAYS TO MAKE OLD ROADS NEW

Salvaging old roads by resurfacing them, as shown in this section of the old Maine Post Road, is feature of Louisville program.

FIVE thousand invitations have been sent to highway officials, engineers, contractors and material men in most of the States between New England and the Rocky Mountains for a good roads conference at Louisville, Ky., October 13-15.

Chief among the measures to be discussed are methods of salvaging old gravel and macadam roads by using them as bases for asphalt surfaces, thus saving vast sums to taxpayers.

The conference is to be held under the auspices of The Asphalt Association, which held largely attended similar conferences at Denver last year and at Atlanta the year before.

Among the speakers on the program are E. W. James, chief of design, U. S. Bureau of Public Roads; Major C. P. Fortney, Chairman, West Virginia State Highway Commission, which is building a fifty million dollar highway system; W. R. Neel, state highway engineer of Georgia, where a movement looking to a vast increase in the state highway program is under way; Charles M. Upham, state highway engineer of North Carolina, the state which now leads all others in highway improvement; Col. R. K. Compton, director of Public Works, Richmond, Va.; C. A. Talley, of the New Or-

J. R. DRANEY, President
The Asphalt Association

leans Refining Co.; Herbert Spencer of the Standard Oil Co. of New Jersey; Prevost Hubbard, chemical engineer of The Asphalt Association, formerly chief of research U. S. Bureau of Public Roads, and J. E. Pennybacker, secretary and general manager of The Asphalt Association, formerly chief economist, U. S. Bureau of Public Roads. An old fashioned Kentucky barbecue as well as smokers and musical programs will feature the local entertainment.

While the salvaging of old roads is to be the feature of the conference, other subjects on the program are "How the Highway Industries Can Best Serve the Interests of the Public in Highway Improvement," "Sand Asphalt," "Black Base," "Research Work in Asphalt Paving," "Advantages of Bond Issues in the Construction of State Highway Systems" and "Asphalt Maintenance."

to the Pittsboro High School. A one year course in Teacher Training is now offered as an additional year of work in the high school. This year is given to an intensive study of the work of the elementary grades by the students whose purpose is to become a teacher.

Provision for Practice in Teaching. The most important activity of the course is the daily period which the students have in practice teaching. For the first few weeks of the term the students observe class room work. This is purposeful observation done under direction of the instructor in Teacher Training. Students are required to study the lessons they are to observe; then the observations are followed by a conference period in which the steps in the lesson procedure are pointed out. Following one week observation work, the students themselves, begin their first teaching using at first small groups of children and starting with the easier subjects to teach, and then gradually working up to the more difficult subjects. This enables the students to acquire something of the technique of teaching and lesson planning without having to wrestle in the beginning with class room management and discipline. Late they are able to handle an entire grade and are given a two-weeks period is given to observation and practice teaching in the schools. Next spring a demonstration class of children who have never been to school before will be organized and teachers under the direction of the Instructor in Teacher Training.

Other Courses Offered. In addition to the work in practice teaching a course is offered in general pedagogy, which comprises observation and practice. This course includes study of child psychology.

Content courses are offered in English, history, geography and in arithmetic. The students are also given courses in penmanship, drawing, industrial arts, public school music, physical education. Thus it will be seen that the student teachers are given the practical training they need to teach in the elementary grades of the public schools.

The Class at Pittsboro. There are now enrolled in this department of the Pittsboro High School ten students under the direction of Miss Ruth Berry who comes to Pittsboro from the Teachers' Training department of Winthrop College. The department is well equipped with standard material for teaching, and equipment was furnished by Chatham county. The state department of education furnishes to Chatham county the services of the instructor.

Opportunity. From the above report it can be seen that an opportunity close at hand is given to young people who are ambitious to teach but for various reasons cannot go to a normal school or college. Through this course they will be able to secure the training which should enable them to become successful teachers.

State Director's Visit. Mrs. T. S. Johnson, of the State Department of Education, who is the wonderfully efficient director of the work throughout the state, has recently made a visit to the Department at Pittsboro and reports that we have an interested and earnest class and that the work has started well. The influence of this work will be felt throughout the county.

"JESUS PAID IT ALL"—GROCERY BILLS INCLUDED.

Sanford Express. The following paragraph from the columns of the Hamlet County News applies to Sanford as well as Lillington and other towns in the country:

"You'd be surprised to see names in this stack of unpaid grocery bills and then look out and see what a delightful time they are having riding in big automobiles and pulling the swell social functions," said a grocerman who seemed to be in doubt about the future of his business.

After further meditations he delivered himself of this bit of philosophy: "But after a man falls these same folks who owe him for his goods may be the first to remark that his failure was the result of a lack of business capacity." Here you have humor and pathos blended in one sentence. Probably this grocer's customers find a way to relieve their conscience by singing in the front porch the old familiar song, "Jesus Paid It All"—grocery bills included.

PAY MONTHLY for having your home painted. I will furnish material, do the work and let you make the payments monthly. A. E. Yarnall, 1518 1/2 St. S., Sept. 15, 1934.
