In Pittsboro for the time being, Miss Lucile Peterson, a recent graduate as a nurse, offers her professional services to the people of Chatham

MULES AND COWS FOR SALE

I have two fine Guernsey cows, right fresh, four-gallon stock, and four nice mules for sale. You can see them at my place at Brick Haven. Merchandise never known to be any cheaper anywhere than at Hall's.

ART MEMORIALS, Mausoleums, By some means our young lady re-link fence Copings for lots and lawns.

Orters failed to learn of the marBAIN-KIMBALL MILAN, Durham, N. C.

### Monster Steam Boiler

The largest steam boiler in the world adds his good wishes for a long and is being put in in Pittsburgh, Pa., by a heating company. There are six miles of four-inch steel tubing in the heating and condensing apparatus, with a heating surface of about threefourths of an acre. The boiler is rated at 3,000 horse-power by the ordinary system of rating, but is capable of operating continuously at three O'clock, when Miss Nannie Lanius and times this capacity and for short periods at four times this rate. When at full load it evaporates 200 tons of water an hour.

Trains Negro Preachers Each summer for seven years a negro preachers' institute has been held at Bettls academy, in the sand hill country of western South Care lina. Last year's attendance included 300 preachers and 180 teachers, and they spent four days in intensive suit seanes and Slater funds.

#### KNOW LITTLE ABOUT OLD NEPTUNE'S BED

#### Scientists Have Arranged to Make Discoveries.

The discovery of a plateau only 150 feet below the surface of the water of the Atlantic ocean was recently an-

nounced. made in the last few years, which show

floor is flat, sloping gently here and of the ladies of the court. there, but never broken into ranges like the dry land. Then, in 1901, the cable ship Britan-

nia discovered a mountain range in the South Pacific which was in every way like a range on the dry land. More recently a range of mountains, known as the Edward VII range, was discovered in the North Atlantic, its highest peaks only a hundred fathoms below the surface. In the Atlantic, too. is Mount Laura Ethel, whose summit towers near the surface.

Several small islands are only the peaks of a mountain range which have broken the surface. The Bermudas rise straight up from a depth of two and a half miles, while St. Helena and Astension island are also mountain peaks. Off the Kuril islands the bottom drops sheer to a depth of five miles, while only a mile or two from the coast of Porto Rico the depth is 27.366 feet.

It is curious that although the bottom of the sea has not changed for a million years, man still knows little about it. Many expeditions are now setting out with the object of salvaging some of the \$1,500,000,000 worth of gold which is hidden in the depths, and these expeditions will, no doubt, make many discoveries concerning undersen

Diving apparatus invented during the last few months enables man to des cend to depths undreamt of ten years ago; but the terrific pressure at great depths is still a great obstacle. Quite as important is the invention of a mercury vapor lamp, which enables films to be taken at great depths. Experiments on a lamp that will illuminate a large area at a great depth are also being made. By means of this the diver will be able to see the hillsides covered with olive-green seaweed, which a passing eddy turns into a wind-swept pine forest, mountains towering to the surface, volcanoes, plains, and many other features which are associated with the grandest land scenery.

#### Make Money From Pest

The extent to which rabbits and hares are a pest to the farmers and stock raisers of New South Wales, Australia, is shown to some extent by the numbers slaughtered each year, notwithstanding which these little animals do immeasurable damage. The flesh of these animals forms a

common article of diet both in the cities and towns and in the country, especially in the winter, when large numbers of men are engaged in their capture and treatment. The year 1919-20 was the record year for the export trade, the total value of exports being \$15,650,000. During that year 6,980,636 pairs of rabbits and hares valued at \$2,600,000 and 9,927,-240 pounds of skins valued at \$13,-140,000 were exported. It is estimated that the skins and carcasses exported during that year, added to the numbers killed for local consumption, totaled at least 100,000,000.

#### A Woman's Way

An unusual weapon with which to fight a burglar was used by Mrs. Clara Remick, of Lodi, when she was awakened by a noise early one morning. Mrs. Remick, fully satisfied that there was someone in the house, jumped from her bed and, grabbing a feather pillow, dashed into her kitchen and chased a burglar from the room. She made a swing with the pillow and struck the fleeing burglar over the head as he darted out of the door and down the back stairs. Then, woman like, she removed the pillow case and put it in the weekly wash before returning to her bed. She was so nervous over her encounter that she forgot to telephone for an officer .-Sacramento Bee,

#### Pigs That Speak French

Some time ago a French girl visited some farmers in Illinois. She heard two boys quarreling.

When asked the cause of the misunderstanding the older boy said: "Well, you see, mademoiselle, that's about old man Tyson's pigs. I was telling Bud those pigs are French, and he said they are not."

The foreigner, rather puzzled, inquired, "What makes you think Mr. Tyson's pigs are French?"

"Well," answered the boy, "because from morning till evening those pigs grunt oui-oui."

### Brazil Advertising

Business interests in Brazil, one of the large coffee producing countries, have turned to advertising as a means of coping with the so-called coffee boycott started by some South American coffee drinkers. In the course of

Mosquitoes Found Refuge tion showed that the magnitues were reeding in the hollows at the base of

the leaves of opcomet tents.

### Has Complete History

of Spanish Mantilla

At last I have found the trail, Francis Miltoun exclaims, in exultant mood, in the Cleveland Plain Deale: Some years ago browsing in the archives of Palma in the Island of Majorca I came across a document which professed to give the history of the Spanish mantilla. Lately it turned up again among a mass of notes. The This is only one of many discoveries, Spanish mantilla was originally a mark of shame for the femininity of that our knowledge of the ocean bed is loose morals of the day, a day away type, as most of the British sailing remarkably poor. In many books pub- back before Goya and the Spanish lished a quarter of a century ago it painters took it out of its class and was emphatically stated that the ocean | made it an appurtenance of the dress

Originally the mantilla crossed its rather straggly ends of the time down over the breast in the form of a letter A. These bretelles were red. One wonders if Hawthorne ever knew this. There's the plot ready made. One and another of most modern and ancient writers went and took what they wanted where they found it, a procedure which is ethically legitimate up to a certain point.

It should be remembered that the mantilla of today resembles very little that of the fairylike Island of Majorca, where the sun ever shines and the thermometer never falls very low. By a process of development it came to be what it is, but it was always a headdress. I put it that way, not being a fashion writer, but I vouch for the rest of the statement as supported by documentary evidence and only recount it here by the possibility of being able to drag in Hawthorne. That happens to be vivid in my mind because in my youth I once lived across the street from the House of Seven Gables. How the circles do cut in on one another, like those of the planetary system!

#### Herring Is Bread

What is to become of the people who live on the islands of the Zuyder ce in Holland when that sea becomes dry land? Pierre Van Paassen asks, in the Atlanta Constitution. As far back as human memory goes these people have been fishers. The sea is in their blood. "Herring is bread," az they say themselves. From their very youth their whole life is directed toward the sea. "Only idiots and fools tay on dry land," a wrinkled old skipper told us once. The little gamins in their wide trousers can hardly walk when they fashion a ship out of an old wooden shoe, fix it up with rudder and sail and float it on the ditch. When they come from school they first must see the harbor. Is there a trawler running in or a tugboat they shout: "Did you see father?" and "How much of a catch did he have?" Fish and the Calvinist sermons of the pastor are their life and breath. The Dutch government, it is said, will compensate them. Nevtheless it all means the end of a picturesque race. And it will be just as hard to make landlubbers out of these children of the sea as it is for Russia to make Jewish merchants into farmers in Crimea.

#### College for Engineers

To supply trained engineers, especially for the automobile, motorcycle and bicycle industries, a technical college will be established at Wolverhampton, England. The total cost of construction will be about \$600,000, of which one-third is to be paid by the county of Stafford and the remaining two-thirds by the city of Wolverhamp-

The buildings will be divided into five sections: (1) general and administrative, (2) biology, (3) commercial, (4) domestic, and (5) technical, comprising engineering production with workshops and drawing offices, material section, including chemistry, metallurgy, and general science subjects, mechanical and electrical engineering, and building construction.

It is intended to make provision for evening as well as day students.

### Bromine From Sea Water

The strangest ship that ever sailed the seas left Wilmington, Del., recently on one of the strangest voyages that ever a ship sailed. This ship, called the Ethyl, is in reality a great floating chemical laboratory, equipped to extract the element bromine from sea

Bromine is a raw material useful in medicine, in photography and motion pictures, and in the manufacture of the ethyl fluid used in motor fuel. Through the last use of the world's supply the chemical has become greatly depleted, and the voyage of the plan to find other sources of supply.

#### Few Windjammers Left

The windjammer has just about given up the ghost, at least se far ac the British flag is concerned. The eld full-rigged vessel that once carried the brunt of the sea cargo is too slow nowadays and it doesn't pay.

The thousands of these British ships that sailed the seven seas now number six. All have served 30 or more years, and, with one exception are three-masted vessels.

Finland seems destined to become the world's last owner of ships of this vessels sold within recent years have been bought by Finnish interests. Grain from Australia, pitrate from South America and salt outward from Liverpool are about the only cargoes now offered for sailing ships.-Detroit News.

#### Record in Thinness

Some of the thinnest films on water ever subjected to scientific measurement were recently described before the National Academy of Sciences by Prof. W. D. Harkins and J. W. Morgan, or the University of Chicago. They are composed of only one layer of the molecules or building bricks of material substances, and some of them are so very thin that ordinary X-rays could not do their vibratory dance within the thickness if such a location were selected for their performance. Numerically, the thickness of some of the films was found to be twenty-four billionths of an inch. Professor Harkins explained that such thin films can be easily formed by simply spreading the proper kind of organic substance upon water.

### Funny Ambitions

The question in an Inglish periodieal, "What would you like to be?" brought out many clever and amusing

answers. Here are a few of them: The sun, because it is always sure of

The letter "f," for then I should always be in the midst of comfort. A shoeblack, because I should be continually shining before my fellows.

A man of forty with the ideals of twenty and the judgment of sixty, to make life worth living.

A billiard ball, frequently kissed, carefully nursed when necessary, and not out of pocket even when in a hole, -Boston Transcript.
