Night Coughing Quickly Stopped

New Way Simple But Very Effective

Night coughing, with its distressing loss of sleep and dangerous sapping of strength and vitality, can now be almost instantly checked through a simple but wonderfully effective treatment that is economical, too.

This treatment is based on the famous prescription known as Dr. King's New Discovery for Coughs. For astonishing relief make this test tonight before retiring—Simply take one teaspoonful and hold it in the throat for 15 or 20 seconds before swallowing it. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the real cause of night coughing. So with the cause removed, coughing stops quickly and you sleep the whole night through.

The Dr. King's New Discovery prescription is for coughs, chest colds, sore throat, hoarseness, bronchitis, spasmodic croup, etc. Fine for children as well as grown-ups—no harmful drugs. At all good druggists. Ask for

- DR. J. D. GREGG, Dentist, Liberty, N. C.
- DR. LUTHER C. ROLLINS, DENTIST, Siler City, N. C. Office over Siler Drug Store. Hours 8 a. m. to 5 p. m.
- DR. J. B. MILLIKEN, Dentist, Siler City, N. C. Office over Siler City Drug Co. Hours: 9 to 5.

Frenchman First to Use Gasoline Engine

The first attempt to employ gasoline as a motive power was made by a Frenchman, Pierre Ravel, who patented "a steam generator heated by mineral oils to be applied to steam locomotion on ordinary roads." Ravel's engine was fitted to a small carriage, and developed three horse power.

The Franco-German war put an end to Ravel's experiments for a time, but years later he built a motor car in which petroleum was used, for the direct generation of motive power. In 1876 Lantz invented a burner by which a mixture of gasoline and other naphthas, called massout, was used as fuel on steamships.

About the same time gasoline was used as an illuminant in street lamps, and later a new use was found for it in the manufacture of varnish and oilcloth. Gasoline, amounting to 8 per cent of the distilled product of the crude petroleum, continued to be a drug on the market until the invention of the gasoline motor, and its application to automobiles, boats, airplanes, and hundreds of industrial uses.

Several inventors helped to inaugurate the "Age of Gasoline," but the chief of them was George L. Selden of Rochester (N. Y.), the father of the automobile.—Chicago Journal.

Equinox Affected by Heating Power of Sun

The autumnal equinox is warmer, not colder, than the vernal in practically all of the continental United States and other places of middle to high latitudes. The reason for this is that the temperature conditions at any locality always lag behind the changing amounts of heat received by the locality from the sun in the course of its annual journey from winter solstice and return. In New Jersey, for example, the heating effect of the sunshine is at a minimum on December 22 of each year, but the lowest temperature of the winter occurs fully a month later, on January 25. The greatest solar heating occurs at the summer solstice, June 22, but the highest average temperatures fall about the end of July. The autumnal equinox, September 21, occurs, therefore, only about five days after the highest temperatures of the year, whereas the vernal equinox, March 21, is separated from the time of highest by fully 130 days, and is separated only about 50 days from the coldest period of the year.

Aerial Supports

The Loomis Radio college says that, while it is generally believed that iron in the vicinity of an aerial absorbs some of the energy, iron supports are frequently employed for this purpose on account of their mechanical advantages. Observe the latticed steel towers used by all the large broadcasting stations, where receivers are also installed as required by law. The aerial should be well insulated from the iron pole and swung a few feet away from it by a stout rope. The other aeriels should run as nearly as possible at right angles to each other. If they are one above the other in the same direction they will rob each other quite noticeably.

Not Qualified

Willie, who was nearly five, and his mother were sitting at home one night. At the table his sister, aged seven, was doing her home work. Suddenly another looked up and saw Willie watching his sister.

"Well, Willie," she said, "it will not be long before you will have to go to school."

"Oh," said Willie, "it's no use sending me to school."

"How is that?" asked his mother.

"What's the use of sending me to school?" exclaimed Willie. "I don't know anything and I can't read or write."

Life of a Sponge

The separate existence of a sponge begins with the breaking away from the parent of a tiny particle. The latter, after being whipped about for a time by tides and currents, eventually attaches itself to a piece of rock, and from that home it seeks its own livelihood, says Natural Science. The food of infant sponges consists of yolk cells, which contain a form of nourishment. Later, as the sponge grows, it requires something more solid, and this is brought by the currents, which sweep into a bag—half mouth, half stomach—minute particles of the new food.

First Iron Vessels

It is not recorded who first discovered that an iron vessel would float as easily as a wooden one. It is recorded that an iron boat was built and launched on the River Foss, in Yorkshire, England, as early as 1777, but the date of the invention of iron as a recognized material for ship construction is often given as 1818, when the lighter Vulcan was built on the Monkland canal, near Glasgow, Scotland.

California's Capital

Before being admitted as a state, the capital of California was Monterey, alternately with Los Angeles. Monterey was the capital from 1840 to 1845, Los Angeles from 1845 to 1847. Monterey was again the capital from 1847 until California was admitted as a new state. The capital was then transferred to Sacramento, and later to the present capital, Sacramento.

THE SOUTH MUST GROW ITS OWN FOOD

NO FARM SECTION CAN BUY ITS FOOD AND GRAIN AND BE PROSPEROUS

Atlanta, Ga.—(Special).—Few people in the South realize the enormous drain there has been on the South's wealth through the steady food and grain buying during the past fifty years. What's the greater pity of it is the fact that most of this money comes directly out of the farm pocket," said H. G. Hastings, of Atlanta, Chairman of the Farm and Marketing Bureau of the Atlanta Chamber of Commerce.

"For fifty years or more the cities and towns of the Cotton Belt have been furnishing food and grain to the farmer instead of our farmers feeding the cities and towns. While the cities and towns have had the best of this unnatural business, it has really impoverished both country and city."

"As nearly as can be ascertained, my own state of Georgia has spent in the last 25 years not less than two and one-half billion dollars for food and grain from the North and West, and hard cash money that ought to be ticking in our farmers' pockets. That money is gone never to return.

"It is no over-statement or exaggeration to say that twenty-five million dollars of the South's money has gone that way in the last fifty years. It was good, hard worked for farm money. What we have been doing is spending our lives growing cotton, raising it off for bread and meat at a profit to ourselves.

"No use to 'cuss' the powers that be in Washington or the trusts, tariff, banks or speculators. They may have had a part but a mighty small part in comparison with the part we ourselves have played. The way to stop that drain on our pockets is to stop buying food, grain and forage and produce those necessary items on home acres.

"The time to start is now. Plans for 1926 are being made. Before a plow is stuck in the ground, food, grain and forage acres should be set aside. These acres should and must be first instead of last consideration. When these are fixed, then the farmer can go as far as he likes with cotton, tobacco or other cash crop safely.

"Give the home garden a chance in this food production. It's a wonderful helper in cutting store bills in half for the folks that will give it a square deal instead of the usual 'lick and a promise,' mostly promise. Start the food production procession in 1926 and a money procession will start toward your pocket."

How Doctors Treat Colds and the Flu

To break up a cold overnight or to cut short an attack of grippe, influenza, sore throat or tonsillitis, physicians and druggists are now recommending Calotabs, the purified and refined calomel compound tablet that gives you the effects of calomel and salts combined, without the unpleasant effects of either.

One or two Calotabs at bed-time with a swallow of water—that's all. No salts, no nausea nor the slightest interference with your eating, work or pleasure. Next morning your cold has vanished, your system is thoroughly purified and you are feeling fine with a hearty appetite for breakfast. Eat what you please,—no danger.

Get a family package, containing full directions, only 35 cents. At any drug store. (adv)
