During the hot months, whenever possible, I shall supply my herd with a cool, clean, outside resting place, where they may chew their cuds in peace and ruminate on the blessings of being a prosider rather than a parasite.

My first step should be the selection of a true type herd sire—a selection which should always command great care and good judgment.

Proper selection of dams also will bring its own rewards in more milk, better milk and better animals.

The comfort of the animal is important. Thorough cleaning aided by periodical clipping about flanks, udders and underlines during stable months and all over the body when turning out in the spring shall be part of my program. Clean animal, clean milk with low bacteria count.

A clean barn, clean plentiful bedding, water at the station and no milking within an hour of feeding are all part of the program which I shall enforce rigidly.

The growth in the number of cow feeding and sanitizing conveniences that membership in one is a good thing. I pledge my national and local support and cooperation.

The delay or economy that cuts my milk must value quality and sanitation as much as I do. They must carry on their part the point because which I have no control.

When my milk is bottled I shall never I can afford to pay for my efforts. I shall get more milk and more money for my milk and the respect of my customers will be a better result.
