#### THE CHATHAM RECORD

### There Is Safety In a Number of Crops

(By Guy A. Cardwell, A.C.L. R.R.) Look not mournfully upon the past. It comes not back again; wisely improve the present. It is thine. Go forth to meet the shadowy future without fear and with a brave and manly heart." This week's agricultural news is a continuation of last week's article entitled "Have You a Farming Program"? and is taken from North Carolina Agricultural Extension Service Farm Program for 1927.

"The following information is given by way of explanation so that each farmer may take into consideration his own local conditions and so plan his farming enterprises that he will meet his own needs for food and feed crops and also produce a surplus.

Growing Feed for livestock. A good ration for one work animal for one year is approximately 50 bushels of grain and two tons of hay. All of these products can be grown on the average cotton farm. One merchant in a typical eastern cotton county sells on an average to farmers more than 2,500 tons of hay per year. Other merchants in the same county are also selling hay. An average of one ton of hay can be, and is being produced peracre in this same county. If this hay were grown instead of being shipped in from other states, it

cotton in that county. Similar conditions exist in other cotton counties.

Gardens. A garden plot of onehalf acre is ample to furnish a family of five with a complete and balanced supply of vegetables, to gether with a surplus for storing and canning. The all-year garden can be made to supply fresh vegetables at different season in the year, and a small amount for sale. Poultry. Each family should

have at least 50 laying hens. In order to maintain this number, it is necessary to raise at least 100 young chickens. The cockerels and most of the birds may then be sold for cash and the remaining hens and pullets carried over for the

future. Records of many poultry growers in the state during the

past few years show that with pro-

per management and feed each

hen will return a net profit of at

will not produce one-half or threefourths bale per acre should be planted to other crops for soil im-

provement or other purposes. Other Money Crops. The cotton farmer who also has a tobacco crop this season is in much better condition than the man who has only cotton. The same condition prevails with those who are now

## SOME DELICIOUS DRINKS FOR DRY DAYS

BIG, juicy, sun-kissed pineapple is one of the best sources of delicious drinks, punches and ices that we have today. In fact it might well be termed the "little brown jug" of Volstead days containing as it does Nature's own "kick" in its amber liquor.

sleep in the Hawaiian Islands and juices and the mint. Allow to had awakened one of these fine stand one hour, strain, add ice mornings near a pineapple planta- and garnish with fresh mint tion he would have thought the lit- leaves tle men with their kegs of whiskey

had turned into plants and their kegs into new and odd shaped brown jugs with stoppers in the tops from which green pointed leaves were sprouting.

Many delicious drinks that Rip Van Winkle never heard of are juice and lemon juice mixed tomade from the liquor yielded by gether, add beaten egg, pour into these little brown jugs. There are glass of crushed ice and sprinkle lent opportunity for the production pineapple lemonades, fruit punches with nutmeg.

and ices as well as the plain iced pineapple juice, so agreeable to the palate and so beneficial to the health. The juice from a can of sliced pineapple may be used in these drinks, the fruit being reserved for salads, desserts, or fruit cocktails. Or the canned pineapple juice may be purchased or, better still, boil the sugar and yields are less than one-half of a without the fruit. Here are three water for ten minutes. Cool, add bale per acre. With the present on or before March 19, 1928, or excellent drinks that may be made the pineapple juice, lemon juice, from this juice:

least \$2.00 per bird per year. This offers an annual opportunity for farmers to have a constant income throughout the year, and, in addition, to supply the family with poultry products. Dairy products. It is now agreed by physicians, health officials and

nutrition investigators that milk is an absolute necessity for the proper growth of children. In a large number of cotton counties there is now an average of only one cow to each four or five families. The annual feed requirements for an 800-pound cow are approximately 15 bushels of corn, 10 bushels of oats, 500 pounds of cottonseed meal, 200 pounds of bran, and two tons of legume hay. There should also be in addition two acres of good pasture. The use of this milk and butter in the home will result in better health, a reduction in doctor's bills, as well as the saving from the reduction in other food

products now purchased. Pork. Each farmer should keep one brood sow and grow at least wo litters of pigs each year. This

would require approximately 125 bushels of corn, and in addition 50 pounds of fish meal and 50 pounds of wheat shorts for each pig. When properly fed, this amount of feed will produce more than one ton of pork. Wherever the farmer has surplus corn, it can be marketed through hogs to greater advantage than by selling it as grain. This has been proven by several hundred farmers who have fed and sold thousands of head of hogs during this year and have received a re-

turn for their corn of almost \$2.00 per bushel. This offers an excelof the necessary meat supply for the farm, and also as a substitution

of a money crop in the place of cotapple | ton. Cotton Production. It is seldom James T. Lawrence, late of Chatprofitable to produce cotton under

North Carolina conditions when the conditions, it is imperative, there- this notice will be pleaded in bar I have made a dream for April, fore, that those lands planted to of their recovery.
