### Chevrolet Employees Get Average 69 Cents

Detroit, Mich., Feb. 18.—That the average wage paid Chevrolet workers approximates 69 cents an hour as compared with a code minimum of 43 cents was revealed here by M. E. Coyle, general manager of the Chevrolet Motor Company.

He also announced that on Feb. 8 the company turned out 3,349 completed passenger cars and trucks. Plants are now geared for capacity operation as fast as manufacturing processes will permit, with prospects for maintaining peak production well into the spring months, Mr. Coyle announced. Dealers are already delivering new 1934 passenger cars to consumers, and with the high volume obtained in assembly plants, any desired model will soon be available for immediate delivery, he added.

Present payrolls of over 55,000 people compare with 33,000 a year ago. "These figures cover only what we refer to as our direct employment," Mr. Coyle said. "The majority of these people are employed at hourly rates at our 21 factories in various parts of the United States. "Present hourly rates are 20 per cent above those of a year ago and equal to those in effect in 1929. Only one trade, printing, pays a rate higher than that common in the automobile industry. At present rates, all the hours of labor we buy, divided into all the money we pay will average 69 cents an hour."

This compares with a minimum wage rate of 43 cents an hour required by the automobile code. Mr. Coyle warned, however, that while his company's pay-rolls have shown decided increases each week for the past several months, only regular resident workers are being put back on the job. No work can be given outsiders now or later, he emphasized.

In commenting on the wide variance between his company's prevailing rate and code requirements, Mr. Coyle said, "so few people are employed at the lower rates and so many at the higher ones that the average is as stated. Naturally, rates vary according to the degree of skill and training required. "We operate 21 individual plants in fifteen different cities, of which Detroit and Flint are the most important. Every large industrial enterprise follows closely the hourly rate of the community in which the plant is located and the prevailing market rate for the class of work required. In our case we do pay and intend to continue to pay above the prevailing rate. Thus the workmen have a constant incentive to improve their work so that they may achieve the highest rates and the best levels of employment.

"As of Jan. 31, our dealers had on hand 108,500 orders for retail delivery of 1934 passenger cars and trucks. Naturally, we are restricted in the number of hours we can give individual workmen by the automobile code, and as to total hours, by our ability to sell our product. From present indications our factories will be working full time for months to come. "We started assembly operations the past week we assembled over three five weeks ago, and during

### NURSERY NOTES

By FLOYD M. JENNINGS  
Valley View Nursery, Pines Knob, N. C.

**Why Should You Prune?**  
1. To remove dead wood. Dead wood is unsightly, altogether unnecessary, is an actual detriment to the plant, and moreover a menace to the health of the plant because all dead wood when decaying, is full of fungi (saprophytes) which spread to live tissue, and cause further decay.  
2. To rejuvenate the plant. Many plants, especially the shrubs which send up new stems from near the ground line, must have the older stems removed to save strangulation. These old stems should not all be removed at once, but a few each year, as the young stems require the room. Following this method your shrubs remain young and thrifty. Another method of rejuvenation is to severely cut back (dehorn) old fruit and other trees, causing them to form a new top of young thrifty wood.  
3. To insure production of better fruits and flowers. Many plants such as garden roses, fall hydrangeas, etc., must be annually pruned if you hope to have large beautiful flowers, while others respond in a lesser degree to summer or early spring pruning.

4. To restore symmetry. Quite often trees, shrubs and evergreens grow out of shape, sometimes due to storms or other injury or where certain lateral branches outgrow the others, when pruning is the only remedy.  
5. To retain desired form and height. This is absolutely necessary in case of formal hedges; also for pyramidal evergreens and deciduous trees of fastigate habit; and often restored to keep shrubs about the house or in the garden from growing out of proportion.  
6. To remove injury or crowded branches. This requires very little explanation. Injured branches should be cut back or removed and crowding branches should be taken out altogether.  
7. To avoid crotches and weak limbs. Crotches should be discouraged in all plant growth as they are liable to split and spoil the appearance and shape of tree or shrub. Weak limbs are star boarders, will never be needed and should be removed.
