Eshelman, W. D. Halfacre, J. D. Moore, Sr., W. E. Jones, C. L. Sockwell, and Miss Mamie Sockwell. Mrs. B. S. Call and Mrs. J. B. Henderson went down from the Wilkesboro church.

Successful Sheepmen Follow Good Program

Growers who make the most money from their sheep and who receive top prices for their lambs and wool aren't doing so by accident, says L. I. Case, extension animal husbandman of State College.

They have learned something about the many factors which contribute to growing a product in ready demand by the market. Chief among these factors are good breeding, feeding, and management practices.

In breeding, the successful sheepman is careful to select short-legged, compact, blocky rams rather than the long-legged coarse, upstanding type. Then he ships to market each year his wether lambs and part of his ewe lambs but holds back the best ewe lambs for replacing old and poor-producing members of the flock.

Good feeding, placed by many sheepmen ahead of good breeding, is likewise highly important in the production of high grade market animals. Plenty of milk is probably the most important feed item in producing top-notch lambs. This means that the ewes must be fed for milk production.

Case said that many growers feed their lambs some grain in addition to the milk. This is often placed in a creep where the lambs may help themselves without being disturbed by the older sheep.

In addition to good feeding and good breeding, there are a large number of approved management practices that the most successful sheepmen follow. Case said. One of the most important is a regular monthly drenching for the control of internal parasites.

Cooperative grading and selling under the supervision of State College Extension farm agents have also played an important part in improving the quality of lambs offered for sale.

A new process for extracting carotene, source of Vitamin A, from alfalfa has been announced by three research workers of Michigan State College.

Hitler With His Parachutists at Front

In this picture of Adolf Hitler at the western front the Fuehrer is shown, according to the German censor-approved caption, with parachute troops whom he honored by awarding them the Iron Cross. The parachutists are credited with leading the attack on Fort Eben Emael, a strategic citadel outpost. Note the crosses, Germany's highest honor.

Admiral Byrd Checks His Polar Maps

Back again in his Boston home, Rear Admiral Richard E. Byrd gets down on his hands and knees before a large map of the wilderness known as Antarctica. He is explaining the many difficulties his expedition has encountered in establishing bases along the unexplored coastline under the Southern Cross.

Good Beef Produced On Southern Grass

It doesn't require Iowa corn to produce palatable and nutritious beef, says Earl H. Hostetler, professor of animal husbandry at N. C. State College. "Our Southern grass will do just as good a job, if we use good sires in breeding our cattle," he declares.

"Recent research has shown that good beef can be produced from Southern pastures, roughage and cottonseed meal," the animal husbandman says. "With the long growing season and greater stress on improved pastures, the finishing of beef cattle will prove a profitable practice in the Southern States. Added to profit from the sale of beef is the value of plant food restored to the pasture land without labor in handling manure."

Prof. Hostetler says that experiments by the North Carolina, and other experiment stations, have shown in certain cases that larger returns are possible from beef cattle that are fed cottonseed meal and grain, in addition to pasture. And by this method the quality of beef is improved and more rapid gains are made, higher prices are secured, and less grain is used than for cattle that are fed to the same degree of finish in a dry lot.

"Cotton belt feeders have proved that cottonseed meal is not only an economical and efficient source of protein, but, in addition, has a productive or fattening value that is important in feeding on grass," the State College man declared.

When farm grains are available, many feeders use a mixture of one part of cottonseed meal and 4 to 6 parts of ground grain for cattle on grass. Pasture conditions and the relative cost of grain determines the proportion of meal and grain fed, as well as the amount of mixture fed to cattle.

Questions Answered By State College

Question: Will it pay to feed moist mash to my laying flock during the summer months?

Answer: Moist mash has an important place in the feeding of most flocks at some time during the year and with the laying birds it should be fed through the summer to keep up egg production from June until October. The best time to feed this mash is about two o'clock each afternoon. Three pounds of the regular laying mash moistened with hot water or milk, preferably milk, for each 100 birds per day will give excellent results.

Mrs. Emma Roberts Funeral Held Today

Funeral service was held today at Shady Grove church for Mrs. Emma Roberts, age 68, who died Saturday night at her home in Somers township. Rev. G. D. White and Rev. W. F. Lawrence conducted the last rites.

Surviving are two children, Mrs. Bessie Gray of Roaring River, Sherman Roberts, of Cycle, one brother, J. E. Goforth, of Cycle, and 13 grandchildren.
