

### EHFA Appliances In April Set New Volume Record

A new high record in volume of new business was set by the Electric Home and Farm Authority during April, A. T. Hobson, General Manager and Secretary, announced.

A total of 9,865 sales contracts were purchased by the Authority in April from approved appliance dealers and electrical contractors. The previous peak month for the EHFA was June 1939 when 8,263 contracts were purchased.

The Authority's recent operations also have been marked by an increasing spread of its activities in rural regions, particularly in areas served by cooperatives which are projects of the Rural Electrification Administration, Mr. Hobson said. This trend is in accord with the EHFA's efforts to provide means for rural families to take advantage of modern labor-saving home appliances through the purchase of electrical equipment on easy terms.

#### Operation Described

Under the EHFA installment financing plan, families with modest incomes can purchase such equipment as electric refrigerators, washing machines, electric ranges, water heaters, and ironers with a small down payment and easy financing terms.

The new record set by the Electric Home and Farm Authority's business in April continued a trend of increasing volume in comparison with preceding years that has been under way for some time. In the first four months of 1940, the Authority purchased 25,258 sales contracts as compared with 17,187 in the corresponding period of 1939.

#### 516 Utilities Are Agents

The increasing availability of the EHFA plan to consumers throughout the country is shown by the fact that 516 public and private utilities are now under contract with the Authority to act as its agents in collecting payments on installment purchases of appliances by their customers from dealers. This represents an increase of 163 since June 30, 1939, when 353 utilities were cooperating with the EHFA.

### Questions Answered By State College

Question: How often should poisoned bait be used to control bud worm damage in tobacco?

Answer: Applications should begin ten days to two weeks after the plants are set and should be repeated every week or ten days until the plants are topped. Make the applications early in the morning when the tobacco bud is open by placing a small pinch of the poison directly in the center of the bud. The bud worm prefers corn to tobacco so do not substitute any other ingredient in the bait for the corn meal. One peck of corn meal and six heaping tablespoonsful of arsenate of lead will make enough bait for one acre of tobacco.

### Questions Answered By State College

Question: How can I keep my cream fresh and pure between marketing days?

Answer: Immediately after milking remove the milk from the barn, strain and separate it. Cool the cream by placing the can in cold water so that the entire contents are below the surface of the water. Stir occasionally to hasten cooling and keep it in cold water until it is taken to market. Warm cream should not be added to cold cream. Catch the cream as it comes from the

separator and place this can in the cooling tank alongside the accumulated cold cream until the next separation. It can then be poured into the cold cream and mixed until the entire batch presents a uniform smooth body.
