

Interesting Items Summit Vicinity

SUMMIT, Nov. 24.—Mr. W. S. Moore and family moved back to the old home place recently which is located two miles east of Summit. Mr. Moore has been a wanderer for a number of years, but has decided that it is better to be at home after all.

Mr. and Mrs. Fred Blankenship visited Mr. and Mrs. J. A. Keys, Sunday.

Friends of Miss Nova Dean Waters will be sorry to learn that she is ill and is a patient in the Wilkes Hospital. Miss Waters has been residing with her sister, Mrs. Ray Church, of North Wilkesboro, and attending North Wilkesboro high school. Her many friends hope for her speedy recovery.

Mrs. Coy Church and little nephew Edwin Church, spent Saturday night in the homes of Mr. and Mrs. Lee J. Church.

Mr. Cleve Hamby visited Mr. Robert Blankenship Sunday morning.

Miss Juanita Keys spent Friday night with her grand-parents, Mr. and Mrs. J. A. Keys.

Rev. Lee J. Church filled his regular appointment at Bridgeport Baptist church Saturday and Sunday.

Mr. H. L. Beshears was a business visitor in the Stony Fork community, Saturday.

Mr. William Beshears, of Summit, is visiting his daughter, Mrs. Lillie Beshears at Stony Fork, at this time.

For an especially Merry Christmas send loads of RYTEX PERSONAL CHRISTMAS CARDS. So original . . . so new . . . yet so full of old-fashion Christmas cheer that they are remembered a long time after Christmas. And so inexpensive . . . 40 RYTEX Cards for only \$1 . . . each Card printed with your Name, and 50 Envelopes. Let Carter-Hubbard show you this nationally famous line of RYTEX Cards.

As London's Children Are Evacuated

British captives with these pictures describe them as "another large party of mothers and children being evacuated to the country from London." At the left a child in a policeman's arms shows her bewilderment at the excitement. Right: a youngster with an identification tag around her neck is being carried to a waiting bus by a policeman.

Lew Ayres Battles His Hardest Case In "Dr. Kildare's Crisis"

This Month On The Farm

State College specialists recommend the following good practices for the month of November:

John Arey, Extension Service dairyman, says that with the approach of cold weather it is important that the young dairy herd receive a little extra care. Clean comfortable quarters and a liberal growing ration should be provided. One of the important factors to remember in developing a heifer is the necessity of growing a large skeleton. To accomplish this, the animal should be fed all the good quality legume hay she will eat, together with five to 15 pounds of silage daily, the amount depending on her age.

In addition to the roughage, enough grain should be fed to keep her in a thrifty growing condition. The amount needed will vary from one to four pounds daily, depending on her age and the quality of the roughage fed. A grain mixture composed of two parts corn meal, one part wheat bran, one part ground oats, and one part soybean, linseed, or cotton seed meal will give good results.

Roy Dearstyne, head of the State College Poultry Department, says November is usually a month of profit for the poultryman. Pullets, if hatched at a reasonably early date, should be in full production, and old hens carried over either for breeding purposes or for egg production alone should be coming out of the summer molt and adding their quota to the supply of market eggs.

Here are points to keep in mind about winter housing: Sufficient litter should be on hand for the cold months; windows of the house should be intact and in good working order; drop curtains should be available where the open front house is used; nesting material for the season should be on hand; and an ample number of nests should be available for the birds.

Enos Blair, Extension Service agronomist, urges that growers finish harvesting their corn and picking their cotton before bad weather sets in. During most years, fairly good weather can be counted on in November, but chances are it will be unfavorable during December, January, and February. Any crop left in the field during these months is likely to be seriously injured.

And along the same line, David S. Weaver, head of the State College Agricultural Engineering Department, cautions growers to be sure that farm machinery is housed well for the winter. Leaving an implement out during the winter will do more harm than many years of use.

The fall is an ideal time for applying lime to "sweeten" acid soils, says E. Y. Floyd, AAA executive officer of State College, and growers have the added advantage of receiving conservation payments for carrying out this practice. At this time of the year, the ground is usually dry, and growers have time to apply the lime. Then through the winter the alternate freezing and thawing causes the land to absorb the lime readily.

So you're going to be married . . . and you want everything perfect? Of course you do! And RYTEX-HYLITED WEDDINGS are perfect . . . from their exquisitely smooth heavy-weight stock to their beautifully designed lettering styles. And the price . . . you'll scarcely believe it . . . 25 RYTEX-HYLITED Invitations or Announcements for only \$3 at Carter-Hubbard Publishing Co.

Laughter, tense drama, and thrills of the scientific world mingle in a rapid-fire plot in "Dr. Kildare's Crisis," newest in the medical-mystery series, coming Monday and Tuesday to the Liberty Theatre. Because of the growing importance of these pictures, the cast was augmented by Robert Young as guest star with Lew Ayres, Lionel Barrymore and Laraine Day. Young plays a new character as Miss Day's brother, arrived from the West, who becomes the "mystery patient" of the story.

Wedding Delayed
In the picture the wedding plans of Ayres and Miss Day are halted by the arrival of her brother, who has developed a mental state identified as epilepsy. This sends the romance of the young couple crashing, as epilepsy is hereditary, for which reason Miss Day refuses to risk marriage. But Barrymore, as the veteran Dr. Gillespie, finds a clue which the younger doctor in his anguish has overlooked, and solves their problem. Amid the drama run comedy episodes, such as Barrymore's "going collegiate" and warbling college songs to the accompaniment of his mandolin.

One of the dramatic highlights is the near cure effected on little Bobs Watson, crippled boy of the series, who is seen receiving the hydrotherapy treatment as successfully used in President Roosevelt's Warm Springs Foundation and in many important hospitals and clinics. A complete hydrotherapy room, authentic in every detail, was constructed for the production and added to the hospital maintained at Metro-Gold-Mayer for these pictures.

Familiar Faces
The supporting cast includes such familiar faces as Nat Pendleton, in the role of the comic orderly, Walter Kingsford as the hospital superintendent, Alma Kruger in charge of the nurses, and Emma Dunn as young Dr. Kildare's mother, who is always ready when he needs advice and sympathy. Others in the cast include Marie Blake, Nell Craig and Frank Orth.

"Dr. Kildare's Crisis" was directed by Harold S. Bucquet, who has guided the previous pictures of the popular series. The picture is based on an original story by Max Brand and Willis Goldbeck.

Rites In Maryland For W. A. Nichols

The body of W. A. (Bob) Nichols, who died a week ago today at the home of Mrs. Annie Minton near Millers Creek, was taken to Maryland for burial. He had been making his home in the state for a number of years but was a former resident of Wilkes. He was visiting in the county at the time of his death.

He died from a heart attack, according to Coroner I. M. Myers, who investigated the death. A few minutes before he died he had complained of pains around his heart.

Questions Answered By State College

Question: When cows and calves gnaw at fence posts and rails, what is the reason?
Answer: This is a sign of mineral deficiency in the ration. A sufficient quantity of calcium is usually contained in legume hays such as cowpea, soybean, clover and alfalfa if these crops are grown on soil not deficient in lime. Where the grain ration contains 30 per cent of wheat bran, cottonseed meal and soybean meal, there is usually a sufficient amount of phosphorous. However, it will do no harm to allow the cows and calves free access to a mineral mixture composed of one part salt and four parts of steamed bone meal.

Britain Pleads For U. S. Ships In "Darkest Hours" Of Conflict

London.—Great Britain appealed "to the shippers of the United States" to help the empire against Germany's sea blockade last night, and at the same time the British censor passed a dispatch saying these are Britain's "darkest hours" since the battle of Flanders last May.

"By themselves, the resources of the empire are not enough," said Shipping Minister Ronald H. Cross.

"I am not going to hide the fact that the rate at which we are building ships does not make up for our losses."

Britain lifted her censorship to acknowledge that since the heavy attack on Coventry November 13, Birmingham, Bristol and Southampton had been struck by Nazi bombs.

Bristol streets were piled high with wreckage, blocked by masses of bricks and stone. There were appalling views of shattered stores and apartment houses.

Need Materials
The British are confident they have the men, but it is arms, planes, tanks and more ships that they need urgently and must have to battle the axis upon equal terms.

Even the most optimistic officials here in the "front line" admit there is much to be done in preparation before Britain can take the offensive. At first they said an offensive could be expected in 1941; now they talk of 1943 and 1944.

Britannia still rules the waves, but needs more American help to do it. A considerable part of recent staggering shipping losses can be traced to deficiencies in escort ships.

Unless Britain can get more United States destroyers to go with the 50 already obtained, shipping losses likely will continue at a high level. There likewise is the need for merchant ships and this need will grow as spring brings an increase in U-boat activity.

Ominous Admission
Yesterday Minister of Shipping Ronald H. Cross made the ominous admission that Britain is losing ships faster than she can replace them.

While Britain's shipyards are working at capacity, part of the facilities must be devoted to naval construction and repairs. "We are 'heretofore anxious,'" he said, "to get more ships built overseas and we are looking primarily to the shipyards of the United States, since by themselves the resources of the empire are not enough."

The press is demanding a speedup of the still-languishing industries and the use of the unemployed, whose numbers are rising despite the war effort.

Britons have been blinded partly by patriotism, partly by propaganda and their censorship often is guilty of making a reverse look like a victory because the British can and are "taking it."

Complacency, distortion and reluctance to admit the truth are as dangerous to the British cause as nightly bombings.

Chicks Need Heated Water During Winter

An egg is 70 per cent water! That is a fact that C. F. Parrish, Extension poultryman of N. C. State College, constantly impresses upon poultry raisers in urging that they provide their flocks with plenty of clean water in convenient fountains. Now, with the approach of winter, Parrish adds this suggestion:

"Arrange for some heated water fountains for the flock to use when cold weather arrives. Water consumption is greater when the chill is taken off, and the more water a hen drinks, the more and the larger her eggs."

The specialist also warns that drafts through openings in the back and ends of the laying house should be eliminated by closing such openings. "Winter is the time to make money from egg production, when the supply is short," he says. "There is a surplus of eggs in the State only during about six weeks in the spring. That leaves about 46 other weeks in the year that our homes and home markets are not amply supplied with quality eggs."

"By selecting chicks of good breeding, and by proper housing and feeding, the farm flock can be managed so as to produce eggs every month in the year. The great need is for summer and fall eggs. If the flock is hatched early in the summer, more care is necessary to prevent partial or complete molt in the fall. However, this can be done quite successfully by the use of wet mash and lights on the laying flock."

"Plan now to produce eggs during the 'other' 46 weeks in the year and to supply broilers and fryers according to the needs of your local market."

CROP ROTATION PAYS DIVIDENDS

(Continued from page one)

years. He further stated that it would pay any farmer to follow a good crop rotation.

The grain rotation that Mr. Roberts follows is: Corn the first year, followed by peas and soybeans the second year or sown in small grain the fall of the second year. Small grain sowed to lespedeza the spring of the third year. This lespedeza is left on the land for

two years and turned in of the fourth year and so on to give the 5th year, giving a 5th year rotation.

In addition to his grain rotation, Mr. Roberts has a good nut pasture and practices method of using a cover crop his tobacco.

The production of manufactured dairy products during 1938 in terms of whole milk equivalent was slightly below the peak year of 1934, says the U. S. Agricultural Marketing Service.

MARLOW'S MEN'S SHOP Manhattan Shirts — Paris Belts

JUST 27 DAYS UNTIL CHRISTMAS

Santa Says: "Start Shopping Now"

Christmas Shoppers who want to save time as well as money will shop through the advertisements of North Wilkesboro business firms appearing in The Journal-Patriot. Mr. Merchant, if you have Christmas merchandise start now telling the public about it—for they'll be looking for gift suggestions from every line of business. This newspaper will be glad to help you plan your advertising campaign.
