It might be of benefit to some other unlucky dame who is tired of her yoke-fellow.

That he might not be duped by his patient, he selected a cat that had fits and other nervous disorders, hoping that he might cure them. After putting the cat to sleep, he willed her to wag her tail. She did so. He then willed her to tie it up in a knot. She did ceived during an affray in that his success, he waited a few moments to become tranquil -and then willed her to speak; whereupon her mouth slowly opened, and she began to mew in a pitcous manner, so as to convince the magnetiser that she was in distress; he therefore willed that she should awake.
