# SOUTHERN RAILWAY CARRIES THIS MANY BLANKETS 896 MILES ON A GALLON OF FUEL.

**"Guess how far a truck could carry it."**

L. Stanley Crane, Chairman,  
 Southern Railway System, Washington, D. C. 20013

The railroad is the most efficient user of fuel in the transportation industry. Bar none. And the Southern Railway is one of the most efficient railroads in the country.

For instance, on the Southern, this 500-lb. stack of blankets can travel 896 miles on one gallon of fuel. How far could a truck carry it on the same amount of fuel? Well, the railroad is, on average, about four times more fuel-efficient than trucks and 60 times more efficient than planes. So it's easy

to see that trucks can't carry freight anywhere near as far as railroads can per gallon of fuel.

What does this mean for the future? Well, it means that trucks will be used less and less for long hauls.

More and more products will ride on

the Southern, and trucks will be used for distribution at the other end of the line. Because, in the coming years, only the railroad will have the energy-efficiency for long hauls.

*We have the energy for the long haul.*
