

STEP IN EASY.

Getting in and out of some sport utility vehicles can be an adventure in and of itself. Not so in the 1996 Jimmy from GMC Truck. Stepping in is easy thanks to the, LOWER STEP-IN HEIGHT -- achieved without sacrificing ground clearance. There's no need for those optional, add-on steps offered by some competing vehicles. But don't let the comfort features fool you. Under the skin of the handsome styling lies the heart and soul of a GMC truck, built to take anything the road can hand out, and tough enough to hand it back. The 1996 GMC Jimmy offers 195 horsepower and true "shift-on-the-fly" InstaTrac® 4WD, and a number of available suspension packages designed to fit the driving needs of just about anyone. Plus, the Jimmy can tow up to 5500 pounds when properly equipped.* So step in and step on it. You're coming on strong.
