USE FULGHUM OATS FOR SPRING HAY

Recent freezes played havoc small grain and hay crops planted last fall, many dairymen and others zel Johnson and James Watson.

have been seeking information about Second and Third Grades Miss crops that may be planted now ari,

John A. Arey, dairy extesnion specialist at State College, recom-mends Fulghum cats for this purpose. However, the cats must be heavily seeded where the crop is to be cut for hay. At least there bushels of seed must be used per acre-

"If Fulghum oats are planted as soon as the soil wil permit, they lips. will make a larger yield of sprir than any other crop that may be planted at this time," says Mr. Arey.
"In tests made at the Upper Coastal Plain branch station near Rocky Mount, this variety of oats produced 2,400 pounds of hay per acre."

Mr. Arey also points out that where the crops planted last fall were well fertilized, it may not be necessary to add further fertilizer under the oats at planting. However, an application of about 100 pounds of nitrate of soda or some other quickly available n trogen material will be highly beneficial. Apply the nitrate when the oat plants are from four to six inches

Planting a crop of spring oats will aid dairymen over a tight period when hay and forage of all kinds will be scarce, Mr. Arey says.

SELECT CLUB MEMBERS FOR NATIONAL CAMP

Four 4-H club members, two girls and two boys, will be selected shortly by the Agricultural Extension Serpice of State College to attend the National 4-H club camp at Washington to be held June 14 to 20, inclu

"The national camp is held annually, and is regarded by extension workeits both in Washington and in the states as the leading · club event of the year," says L. R. Harrill, state club leader. "To be selected as a delegate to this camp is generally considered as the greatest honor that can come to a 4-H club member. The four delegates from North Carolina toether with four others from each of this route Thursday, he remaining 47 states of the Union Mr. and Mrs. Mack Wood, of Phila the remaining 47 states of the Union are selected from a membership of about one million club members. In North Carolina, the four delegates ent about 30,000 club

To be selected as a delegate to the national camp, a club member must be at least 15 years of age, must have completed three or more years of work, being active in 1933, and must be able to furnish complet re-cords on his club projects for the three years is election of the delegate will be based upon the club members' report, the part he has taken in commity activities and the written story of his experiences and results as a

Mr. Harrill says speakers of na-tional prominence will be on the pro-gram of the Washington camp. In ad-dition, there will be trips made to all the interesting and historical points about the National Capital. All of the principal governmental departments will be visited and studied.

MORE RED MEAT FROM NEW PASTURES

Every basic crop priducer has ample opportunity to provide himself on their return they called to see and lot from and Lois Womble. The judges decided their brother, Stanford Hunter, who in favor of Miss Lois Womble, who is the second at that he crop adjustment program is under way, says L. I. Case, an mal husbandman at State College, With the reduction of basic crops-

cotton, tobacco, corn, hogs, wheat, and the like certain acreages must be set aside. Much of the land thus retired is suited for pasture, Case says, and should be used as such.

Case advises the use of beef cows that are fairly good millers. In this way, the landowner may be provided with all the milk and cream his family needs and at the same time be able to raise calves into good beef

Beef that is not consumed fresh after the slaughter can well be canned for consumption throughout the year. Beef produced on the acreages retired from the production of basis crops cannot be marketed, Case

Two acres of good pastures are needed for each curv. A ton and a half of hay and 12 bushels of corn, or the equiavlent, should also be provided for each animal.

Case urged farmers to seed pasture lands where they do not already have a good stand of grasses. On loamy soils of the Coastal Plains a seed mixture of: carpet grass, 10 pounds; lespedeza, 15 pounds; and dallis grass 5 pounds, has proved good.

On coarse, dry, sandy soils the fol-lowing mixture is good: Bermuda, 6 pounds; dallis grass, 6 pounds and lespedeza, 18 pounds. On black, peaty soils blue grass and herds grass with lespedeza are good.

FERTILIZING COTTON

AT SIDES OF ROWS GIVES BEST RESULTS.

At a meeting of the Souther section of the American Society of Agricultural Engineers in Memphis, Tenn., on January 31, G. A. Cummings, Bureau of Agricultural Engineering, United States Department of Agriculture, reported results that have been obtained during the past four years in experiments designed to Determine the best method of Fertilizing Cotton. A comparison of many methods has shown, according to Mr. Cummings, that fertilizer gives best results when deposited in bands on both sides of the row of cotton, and not more than three and one-half inches away from the seed. This placement has given the best stand, and the highest yield per acre of a large number of tests in eight of the cotton states. This work was initiated by the Association in 1929, acting through the joint committee on Fertilizer Application and in cooperation with the U. S. Department of Agriculture and various State Experiment Stations. The experiments during the first year were conducted in South Carolina, but beginning in 1930 the work was expanded to include eight of the dotton states, the experiments being locally all the way from Edgecombe Truck Farm in North Carolina to Temple, Texas.

SAPONA MILLS believes, not only in giving the customers the BEST FERTILIZER, but the BEST METH-ODS of using that Fertilizer.

When you buy OVERSIZE SAPONA FERTILIZER. you may rest assured you are not buying a 1910 model, but a FERTILIZER made for this section based on latest information.
