immediate attention. It is our desire
to please you. storing corn in the shock. Southern agricultural journals have published lengthy communications endorsing this method, and have given it edi-torial endorsement. We doubt seri-ously its advantage in the Southern climate, and suspect it for its danger. Corn that is "shucked" is, at least, dry and unlikely to spoil. Corn that is stacked, as we understand the method to be, in the shock is certain-ly open to the weather. We doubt the efficacy of the stack in preventing spoiling. It is just possible that the increase in pellagra in the South is due to the Southern farmer's absorp

tion of this new doctrine?
As we understand the case, it is true that in the West, where the The people of the entire city are the or no rain falls during the harvest season, corn may be successfully har Evangelist Black heat week with season, cors may be successfully hard pleasure. He is a speaker of no small abrity and has hid great success in the meeting. He scaled Washington several years and, holding a meeting in the First Preshyterian Church, its will conduct the mion the health of the people into consideration. Yet the farm and agreatures. tion. Yet the farm and agricultural journals mentioned have almost unanimously stressed and recommended this method to Souther farmers. And nowhere have we seen any discussion of this possible danger - a danger nut immained by us. suggested by farmers in the first
