FARM and GARDEN

TOAD IS GARDENER'S FRIEND. Nearly Every Element of Its Food is Made Up of Insects Which Are Pests in the Fields.

The common toad has been the subject of ridicule, contempt and superstition for centuries past. Nature has endowed beauty and attractiveness to this little creature. To many people it is more repulsive than its relatives, the reptiles. We should learn to protect the toad and respect him for the good he does to us all.

We have heard much of the value of birds and of the necessity of protecting them. It is time we began to care for the toad, as well, for their capacity for insect meat is truly astonishing, writes F. B. Swingle in the Northwestern Agriculturist. Examination of 149 toads' stomachs proved that 98 per cent. of their food was of the sort indicated above. Cutworms, ants, bugs and beetles, spiders, potato bugs, thousand-legged worms, weevils, tent caterpillars and grasshoppers were eaten by thousands. Wire worms and army worms, crickets and cucumber bugs, rose bugs and plum curculio were relished just as well. The grasshopper, the cabbage moth and grape caterpillars constitute his favorite food in certain localities. And it is remarkable what storage capacity is exhibited by the toad. In one stomach 77 thousand-legged worms were found; in another 37 tent caterpillars; in one 65 grasshoppers, and in another 55 army worms. Of course it would be difficult to determine the number of insects that a toad at liberty would consume in an entire season. It is sufficient to know that they are well worth protecting.

The Garden Toad.

TO TELL FUNNY STORY

PROPER METHOD IS REVEALED BY THEOPHILUS SMITH.

Take Joke by the Hand and Lead it About Until Thoroughly Acquainted, Then Assume Air of Undertaker and Spring It.

Ever since Cain slew Abel for calling one of his pet jokes a "chabstut," the world has been taking lessons in the art of being funny. The desire to be funny lurks in every human breast. There have been men who have lived it down, and there have invariably become great statesmen.

The Morning Telegraph has called upon Theophilus Smith, the great expert and scientist, who is said to have been the first man who ever made a theater box office well and he kept his secret well and became famous. Prof. Smith said: "Humor is anything that is funny. It is in everything and in everybody. Extracted humor is followed by laughter, for it is by striking the responsive humor chord in the human breast that we get our only true effects."

"Therefore, no matter how good the joke, unless it is told in a manner to strike that cord, it falls of its own dead weight and furnishes us with one of the saddest sights in life."

"Select from any well known joke book a story. It should not be too new, as it is likely not to go so well as an old reliable joke that has been through several campaigns. Then out from it all unnecessary adjectives, descriptions and apologies."

"Never apologize for a joke. Take your joke by the hand, and after having led it about until you know all of its family history, assume the air of a funeral director telling the relatives from which side of the casket they are to view the late-invented, and then give utterance to your joke."

The best way is to get the point of the story well in mind and then put it away entirely until you need it. Nothing so interesting with the success of a joke as to have the point hanging around in plain sight before the story is well started.

Remember above all things that the face should be solemn, and the voice low and well modulated, with just a suspicion of sadness in it.

Learn to pause at the right place, and if you are in doubt at all, the best place to pause is just before you start.

This has been known to save a man many friends that he otherwise might have lost.—New York Morning Telegraph.

VALUABLE FARM BY-PRODUCT

Many Farmers Neglect to Care for Manure and Spend Their Money for Commercial Fertilizer.

(By W. H. KELSEY.) In spite of all that has been written telling of the value of stable manure there are many farmers who still neglect to care for this valuable by-product of the farm and spend their money for commercial fertilizer. I do not wish to discourage the use of commercial fertilizer, but it should never be used until the stable manure is first taken care of and applied to the soil. If there is not sufficient manure to meet the demands of the crop the deficiency should be supplied by using commercial fertilizer.

It is rather difficult to estimate the value of stable manure in dollars and cents as commercial fertilizers are valued, since the stable manure adds much valuable humus to the soil as well as direct plant food and the commercial fertilizer is valued for the direct plant food alone.

Dr. Alkman says that the humus of the stable manure is worth quite as much to the soil as the direct plant food. Valuing the phosphoric acid at five cents per pound and the potash at five cents per pound and the nitrogen at 15 cents per pound a fair average value of the stable manure may be estimated as follows:

10 pounds nitrogen at 15 cents..... 1.50
10 pounds potash at 5 cents..... .50
5 pounds phosphoric acid at 5 cents..... .25

Then if we add the value of the humus, commission charged by agents and freight on commercial fertilizers we may still be conservative when we double the commercial value of the manure and count a ton of well-cared for stable manure worth \$10.00 to the farm.

Its value is not appreciated because it is a by-product and because farmers have fallen into the habit of neglecting to properly care for the manure and apply it judiciously.

The manure when allowed to accumulate about the stables is in the way and is a repulsive, bad-smelling product, but when drawn to the field and distributed over the soil by means of spreaders it is out of the way and is also preparing the soil to grow a large crop.

PRACTICAL HOME-MADE ANVIL

Handy Farm Implement Can Be Constructed Out of 4-Foot Piece of Old Railroad Iron.

This anvil can be constructed from a four-foot piece of railroad iron on a trestle, as shown in the illustration.

says the Practical Farmer. This will stand heavy pounding, and comes in handy. The rail is just the right shape to make an anvil. Take oak or any hard wood for the legs.

Cows permitted to continue their natural lactation periods, nine to ten months, will usually cease milking with very little trouble.

Home-Made Anvil.

With rapidly. Cows are profitable. The work horse needs care. Use fresh eggs in the incubator. Weeds delay the curing of grain and hay.

Feeds will not quantities of manure and gravel. Sweet challenge is said to be a milk food for work horses.

Plenty of exercise for the cows in the winter time is imperative. Finely broken charcoal occasionally makes an excellent conditioner.

About an ounce of food a day is needed for every pound of live weight. In fitting horses for hard work increase the grain ration but not the hay.

At present prices of corn and hay, hog feeders are just about breaking even. Do not have the trees come falling on you are ready to put them into the ground.

Sheep should not be kept with horses or swine, for they are liable to get killed. Sheep do best on high, rolling ground; low ground produces floundering and parasites.

Millet will yield between three and four tons of hay per acre under favorable conditions. Fruit trees are slow-growing plants, and therefore do not need quick-acting fertilizers as a rule.

A herd of good dairy cows is the best insurance against hard times or a slump in prosperity.

Is Coffee a Poison? Read this. The average cup of coffee contains about 2 1/2 grains of "caffeine"—the drug that you read about here. Coffee drinkers often suffer from headache, nervousness, indigestion, biliousness, heart irritation and other symptoms of ill health—due to "caffeine," the drug in their coffee. The cause is often not understood until expert medical test shows up the bald facts. One can get relief from the ills caused by coffee by quitting it for 10 days and using POSTUM. A pure, palatable food beverage that tastes much like high-grade Java but is absolutely free from Caffeine or any other drug. If the 10 days' trial shows you some facts perhaps you may conclude it's worth more to be well than to drink coffee—it's up to you to decide. "There's a Reason" for Postum. POSTUM CEREAL COMPANY, LTD., BATTLE CREEK, MICH.
