

Agents Handle Allotment Cards

Growers Who Need Additional Allotment Cards Must Secure Them Through The Office Of The County Agent

Washington, Aug. 12.—Contracting flue-cured tobacco growers may market tobacco grown in excess of their present sales allotments by purchasing the unused sales allotments of other contracting growers, and having their allotments increased in the County Agent's office, the Agricultural Adjustment Administration announced last week.

J. B. Hutson, director of the Tobacco Division, said that this arrangement had been developed, at the request of tobacco growers from various parts of the belt, so as to provide needed flexibility to care for variations in individual crops due to seasonal conditions. Growers having large yields will benefit through sale of their excess tobacco, while those having short crops will benefit through larger payments received from growers whose crops exceed their sales allotment.

Producers under both Production Adjustment Contracts and Special Base Contracts may take advantage of the plan. Producers who sell their unused allotments will agree to forego the 1935 adjustment payments under their contracts.

All arrangements for the marketing of excess tobacco will be made through county agent's offices. Necessary instructions and forms will be available at county offices in the Georgia-Florida area around August 7 and at county offices in other parts of the belt when the markets open.

Producers whose crops fall below or exceed their sales allotments may advise their county agents who will assist them to sell or purchase, as the case may be, the unused allotments. Producers having excess tobacco will pay 4 cents per pound to the producers whose allotments are purchased, except in cases where individual producers agree on a different rate.

Allotment cards for the quantity of tobacco purchased will be issued at the county office in the name of the producer who makes the purchase. One producer cannot use an allotment card issued to another producer.

A producer who sells his unused allotment agrees to divide the money received from the sale with any tobacco share-tenants and share-croppers on the farm in the same proportion that the 1935 adjustment payment provided by the contract would have been distributed had the sale not been made.

Mr. Hutson pointed out that under the procedure for the 1935 season growers will not transfer tobacco between allotments but will have their own sales allotments increased by the amount of unused allotment purchased, thus establishing a record of the 1935 tobacco production on the farm. He stated that the Growers' Advisory Committee and extension workers have approved the general plan and expect it to greatly facilitate the marketing of the 1935 crop. Under this plan total sales by all contracting growers will be limited to not more than the maximum number of pounds allotted under all contracts.

The County Board of Agriculture and the county cotton and tobacco committees are co-operating to build the agriculture of Pitt county. The three committees met recently are proposing a budget for the farm work of the county.

A farm tour to study demonstrations in forestry, trench silos, bull pens, yard improvement, remodeled furniture and the like will be held on August 21 in

Improve Dairy Herd At College

Records Kept On Dairy Herd At State College Shows Improvements That Have Been Made During 30 Years

Records kept on the dairy herd at State College are considered one of the main factors aiding in the development of its efficiency and productivity.

For thirty years complete records have been kept of all milk production, cost of production, cost of raising young stock, the amount and kind of feed consumed, and the methods used in breeding, feeding, and selecting the cattle.

The system of herd management is based on the data thus made available for study in the records, said Prof. F. M. Haig, of the animal husbandry and dairying department.

As a result, he pointed out, during the past eight years the average production of the cows has increased 18 per cent for milk and 15 per cent for butter—with the cost of production dropping 30 per cent.

In 1927 the average production of the 37 cows in the herd was 7,288 pounds of milk and 364 pounds of butterfat per cow each year, and the cost of producing 100 pounds of milk was \$2.26.

Now the average production is 8,590 pounds of milk and 417 pounds of butter. The cost of producing 100 pounds of milk is \$1.58.

The present herd consists of 90 registered Jersey, Guernsey, and Holstein cattle. Thirty-four cows are of milking age.

No cows are kept in the herd unless they can meet the high standard required. The U. S. Department of Agriculture has certified that all the animals are free from tuberculosis and Bang's disease.

Students use the herd as a laboratory where they may learn by actual practice the solution of numerous herd management problems. Many of the young registered bulls are sold to farmers for improving dairy herds over the state.

PUTTING OUT!

A report from the senate lobby investigating committee Sunday gave as the amount already determined as spent by utility companies in the Wheeler-Rayburn conflict, \$1,750,000. The investigation still continues, each day uncovering a new and large expenditure made in the defeating of the measure. Chairman, Hugo Black, Democrat from Alabama, predicts that ultimately the committee will find that not less than \$5,000,000 was spent for lobbying.

Stop Chills and Fever!

Rid Your System of Malaria!

Shivering with chills one moment and burning with fever the next—that's one of the effects of Malaria. Unless checked, the disease will do serious harm to your health. Malaria, a blood infection, calls for two things. First, destroying the infection in the blood. Second, building up the blood to overcome the effects of the disease and to fortify against further attack.

Grove's Tasteless Chill Tonic supplies both these effects. It contains tasteless quinine, which kills the infection in the blood, and iron, which enriches and builds up the blood. Chills and fever soon stop and you are restored to health and comfort. For half a century, Grove's Tasteless Chill Tonic has been sure relief for Malaria. It is just as useful, too, as a general tonic for old and young. Pleasant to take and absolutely harmless. Safe to give children. Get a bottle at any drug store. Now two sizes—50c and \$1. The \$1 size contains 2½ times as much as the 50c size and gives you 25% more for your money.

Last Week . . . on Thursday and Friday

the Whiteville Market proved to be a veritable gold mine to the tobacco growers of Eastern North and South Carolina. Its six warehouses paid out money at the rate of - - - - -

\$309.00 Per Minute

to the tobacco growers who sold on this market these two days.

The greater majority of the tobacco sold on this market was tobacco of the common or medium types. However, with these first offerings warehouses averaged as high as \$26.04 per hundred pounds for their entire sale. That is why everyone calls Whiteville—"THE MONEY MARKET."

Buying competition is keen. Prompt courteous service awaits you in Whiteville. With six warehouses and three sets of buyers you are assured of a speedy sale.
