Roosevelt Again Declares Nation To Stay Neutral

President Also Issues Veiled Warning To Business Seeking War Profits

KEEPING CHECK UPON ALL WAR SHIPMENTS

Statement That America Will Do Nothing To Prolong War Regarded As Significant

Washington, Oct. 30.—President Roosevelt and Secretary of State Cordell Hull today enlarged the government's neutrality policy to insure that nothing is done that would lengthen the Italo-Ethiopian war, and issued a veiled warning that stronger action will be taken against those who disregard the warning against war trade.

Shortly after his ranking cabinet member had issued a strongly-worded statement on neutrality, Mr. Roosevelt handed correspondents at his press conference the text of his views on the subject. The President backed up Hull in his declaration that the government has two objectives: To keep out of war. To do nothing which would aid in protracting the war.

N. C. Farms Need More Soybeans

"The Crying Need Of Most North Carolina Soils Is More Organic Matter," According To State College Specialist

"The crying need of most North Carolina soils is for more organic matter. Soils need plenty of organic matter to supply plant food, to keep them mellow and friable, and to make crops less subject to drought. Organic matter helps the soil absorb moisture and hold it. This checks erosion in rainy weather and keeps the land from drying out rapidly in dry weather. Soybeans greatly increase the organic matter in the soil, when plowed under, and this is one of the reasons why I recommend that farmers raise more soybeans," said C. B. Williams, head of the agronomy department at State College. A good crop of soybeans will

produce from one and a quarter to two tons of plant material on each acre. Each ton of soybeans contains as much nitrogen as 300 pounds of nitrate of soda or 200 pounds of sulphate of ammonia. Or the plants may be cut for hay and fed to livestock with excellent results, as attested by animal husbandmen at the college. However, when the crop is cut for hay, they do not add any nitrogen or organic matter to the soil. The beans may be fed to livestock, but they tend to produce an oily meat. So it is recommended that the beans be crushed into meal with the oil removed. Soybean meal may be fed without any bad effects, it was pointed out.

Professor Williams urges growers to save their best seed for planting next year. If they have a surplus, they may sell it at a fair profit to their neighbors.

Greene county tobacco growers have purchased 33,000 pounds of tax free allotments from other growers who did not produce their full amounts.

When 17 new crop rotation demonstrations were started in Alamance county last week, a total of 52 for the county was reached.

Proud Suburban Lady: You know my husband plays the organ.

Depressed Acquaintance: Well, if things don't improve, my husband will have to get one, too.

Early frost in eastern Carolina has started Martin county farmers to digging the sweet potato crop. The county has 68 modern curing houses, says farm agent T. B. Brandon.

Is Your CAR READY? Now is the time to change to winter-weight oil, have your battery repaired and a general check-up made to get your automobile ready for winter weather.
