AFTER SICKNESS OR OPERATION

It is a pathetic mistake to accept drugs or alcoholic mixtures when nature craves nourishment to repair the wasted body and restore the vigor of health.

For forty years the best physicians have relied on the wholesome predigested nourishment in Scott's Emulsion which is totally free from alcohol or opiates.

Scott's Emulsion sharpens the appetite—renews blood—nourishes nerves—strengthens bones and restores the courage of health to make life bright.

Scott's Emulsion acts in action the very forces that promote health; it is pure, rich strength.

**HOOKWORM DISEASE
TREATED FREE**

Randolph county commissioners, co-operating with the State Board of Health, will conduct temporary Dispensaries for the examination and treatment of Hookworm disease and other diseases due to intestinal parasites. These Dispensaries will be free to all from 9:30 a. m. to 3:30 p. m. at the following places:

- Liberty, Tuesdays, April 7, 14, 21, 28, May 5.
- Randleman, Wednesdays, April 8, 15, 22, 29, May 6.
- Seagrove, Thursdays, April 9, 16, 23, 30, May 7.
- Ramseur, Fridays, April 10, 17, 24, May 1, 8.
- Asheboro, Saturdays, April 4, 11, 18, 25, May 2, 9.

Dr. John Collinson, of the State Board of Health, and District Director for Hookworm, will be in charge of these Dispensaries, assisted by J. L. Tregellas, Microscopist. Lectures on Hookworm Disease and Sanitation will be delivered daily. You can see at the Dispensary all kinds of worms and pictures of people before and after treatment.

Remember

About one-third of the people of North Carolina are suffering with the Hookworm disease, and consider their trouble due to some other cause. More than 300,000 people have been examined in this State alone, and of these 150,000 were treated for the Hookworm disease. You may have from less than 100 to 2,000 worms living in your small bowels. These suck the blood, poison the body and wound the intestines. Each worm lays from 2 to 6,000 eggs daily. These pass with the bowel movement of the infected person, the eggs hatch and in nine days the little worms are ready to enter the body, through the mouth or skin.

The Hookworm disease often causes a waxy white or muddy color of the skin, a dull stupid appearance of the face, the chest to be thin, the ribs prominent, the shoulder blades wing-shaped, distension of the abdomen, and swelling of the feet. Other symptoms are headaches, dizziness, shortness of breath, a tired feeling, and inability to do much work. The appetite is changeable and indigestion or heartburn is common. Children are stunted and ill-developed, making poor progress at school. If you have had the ground itch, or dew itch, or dew poison, you probably have the Hookworm disease, as the common mode of infection is through the skin.

Parents who do not use this opportunity to rid their children of this dreaded disease, are standing squarely across their offspring's future, condemning them oftentimes to an early death or a life of misery. It will not only lessen their chance of success, but may result in making them a public charge.

Examinations will be made and treatments given, not only for the Hookworm but for Roundworms, Tapeworms, Whipworms, the worms of Cochin China diarrhoea, and Thradworms.

There is a lot of Hookworm disease in your neighborhood, all should be examined. The State and County pay the bills for your examination for this short time only.

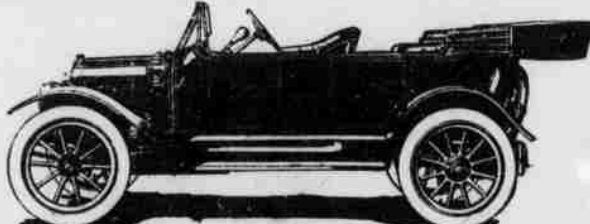

TO BE EXAMINED.

Bring on your first visit a very small quantity of your bowel action in a very small tin box, such as a salve box, with your name and age written thereon, as only in this way will the examination be made. It is not necessary for all to come. One person can bring the boxes from a whole family or community.

BUT FEW PEOPLE ARE CURED BY TAKING LESS THAN THREE TREATMENTS. We give but one treatment at a time, and the treatments are taken one week apart.
