Prof. Zebedee F. Blair passed away in Conway, Arkansas, on Friday morning August 27. He was a native of Randolph county, North Carolina, where he was born about 56 years ago. He graduated from old Trinity college in 1883. Shortly after, he went to Arkansas where he taught school for a number of years. Then he went into the life insurance business. About twenty-four years ago he was married to Miss Thoe Bruton, a Presbyterian minister's daughter, who preceded him to the great beyond several years ago, leaving one little daughter who is now grown and was the idol of his heart. The deceased leaves five sisters and one brother to mourn their loss. He was a consistent member of the M. E. church and did not miss a Sunday from Sunday school and church for several years. His congenial manner attracted friends wherever he went. He was very much devoted to his dear mother, the late Mrs. Mary Blair, whom he often visited. He frequently remarked that if there was any good in him he owed it to his mother. While our hearts bleed with sorrow, we hope and trust that his departure from this life means a birth into life eternal where nothing shall mar its beauty and where happiness shall reign supreme. A. LANDSLIDE AT HIGH ROCK

At the time of the landslide at High Rock in Davidson county The Courier carried a full and complete account. There was considerable speculation as to the cause of the slide, its origin and extent. The Denton Herald in a recent issue has this to say of the landslide:

"The slide is located on a very steep and precipitous side of Healing Springs mountain, covering an area of approximately one and one half acres. It is flanked on the sides by very deep ravines and from all outward appearance the slide was caused by the laws of gravity, the disturbed area having a tendency to expand and spread out. The movement of the slide, ceasing when it had assumed a shape conforming with the surrounding terrain. Many have asked what would cause the starting or first movement of a slide of this nature, which is a question very easily answered, when we consider the physical qualities of the displacement. The two most plausible reasons are: (1) The striking of some object near at hand by an extremely violent stroke of lightning. (2) The heavy blasting that has occurred in that vicinity in the construction of the South Bound railroad running near there. Reason given for volcanic disturbances or earthquakes are the coming in contact by an underground stream or body of water with an extremely heated part of the earth's interior causing explosion, with the attending upheaval or depression of the surface of the earth in that vicinity. The slide at High Rock is marked by many large cracks at a depth in some places of from six to eight feet, and from two on up to six feet in width. While the larger ones are seventy five feet or more in length. Several trees have been uprooted while others were bent and twisted and some have died since, the slide by lack of nutrition the downward movement or giving away has at the beginning or starting of the slide at is higher extent appears to be about twelve and not more than fifty feet while farther down the hillside it has assumed the shape of an upheaval by the bulged up appearance of the surface. The most noted and well understood are those of the Panama Canal.
