AUTOPHAGY
DR. J. W. SMATHERS, M.D.,
 Ph.G., tells of amazing results produced by Sargon in over ten thousand cases.

"As an official investigator for the Sargon Laboratories, I have personally seen Sargon at work in many thousands of cases in different parts of this country. I have seen it win victory after victory over stubborn ailments of long standing that had apparently defied all other medicines and treatments.

"Based on recent discoveries by Medical Science, Sargon is accomplishing its remarkable results by methods undreamed of only a few years ago and may well be considered one of the great outstanding health giving remedies of the age."

TO COVER STATE WITH FARM MESSAGE
 (F. H. Jeter)

A program of farm meetings for the purpose of carrying facts about the agricultural outlook and the need of food and feed-stuffs production in North Carolina next season has been arranged by the agricultural extension service of State College to cover every county in North Carolina during January and February.

Five teams of extension specialists will go to work during the week beginning January 5 and starting in the coastal counties will work gradually westward towards the Tennessee line. Five meetings a day will be held. In these meetings, the speakers will present facts about the present production of food and feed supplies, will show how far the county is from being self-supporting, and will outline the program embodied in the adopted slogan, "Farm to Make a Living in 1931."

Dean I. O. Schaub says the campaign will be in charge of the district agents in their respective groups of counties. The local home and farm agents will arrange the meetings and give them local notice. Leading key farmers, bankers and business men of all kinds will be invited.

There will be no guess work in the facts to be given, says Mr. Schaub. Already the economists are working out the need of a family or a livestock unit for feed and food for one year. The home demonstration people are also at work on facts about more complete diets which may be prepared from foodstuffs produced at home.

Mr. Schaub says it is not enough next year to reduce the acreage to cotton and tobacco. The crops that may be raised in place of these two must receive attention. The need of
