Kirkendall Says Morality Changing

(CONTINUED FROM PAGE 1)

is necessary to look at sex not simply as an act, but as an aspect of relating. To do this, we must be able to communicate much more freely than we do.

Sex must be thought of as a relationship. A relationship is a growing thing to which someone must give some emotional investment. Dr. Kirkendall presented an outline depicting the growth of a relationship. At the head was Confidentiality. This he considered to be the most important basis

for a growing relationship. Following this were trust, empathy, maturity and motivation, affectional expression, emotional investment, and sexual expression. These are the things which build a meaningful relationship.

Dr. Kirkendall gave many examples during his lecture which brought the audience closer to the ideas that he was presenting. His purpose was not to change the ideas of those listening, but to try to bring into perspective all the different and outdated ideas about sex today.

New Method For Admissions Started By Bucknell University

Lewisburg, Pa. (I.P.) - How does a college admissions staff select a freshman class of approximately 700 students from among 4,500 applicants? At Bucknell University a system is currently being used which has eliminated hundreds of hours of paper work and eased somewhat the selection task of the admissions director, Fitz R. Walling, and his three assistants.

This program, which was set up with the cooperation of the University's computing center, involves the use of an admissions information retrieval system and is designed for a medium-sized school which emphasizes individual attention.

This system, which employs machine recognizable records of the College Entrance Examination Board and College Scholarship Service and some specially designed forms, provides a manageable record for use by the University's admissions staff.

The program operates, briefly, in this manner. When a completed application is received in Bucknell's admissions office it is kept there, but a sheet containing basic data on the applicant is sent to the University's data processing center for the purpose of making punch cards, a receipt for the application fee and a label for the applicant's master folder. The punched cards are then sent to the Computer Center for storage on the admissions disk.

Throughout the fall and winter additional information is entered into the student's file on the disk. This includes material taken from the secondary school transcript when it arrives in the Admissions Office, information gathered during a personal or group interview or a visit to the campus, College Board scores and financial aid

data. Midway through the winter the admissions office begins to receive weekly specialized charts from the computer center. These show such things as the number of applicants to each of Bucknell's 18 degree programs, mean aptitude scores of the applicants, percentage of applicants in the top fifth of their high school classes, a geographical breakdown of the applicants, and a listing of College Board scores in fifty point ranges.

There are also charts to indicate applicants who are children of alumni, and those which point out particular interests or achievements of the high school seniors.

Any information contained on the disk may be changed or updated at any time by introducing a punched card containing the new data. The material stores on the disks is used to print labels for mailings to students who have been accepted.

New and highly useful charts are also prepared for the admissions staff. Of particular interest to many other departments in the University are lists of special interests and activities of the students who have been accepted. Departments may use these to encourage individuals they are interested in to accept Bucknell's offer of admission.

Bucknell's system is one of the most sophisticated of its type of computer program for use by their admissions offices. A more ideal system than Bucknell's is possible, but the University's admission staff is quite happy with the present program, and the slight increase in filing necessitated by the production of master sheets for each applicant is more than compensated for by increased

knowledge of the entire group and more time for individual attention to each applicant.

Elegance keeps its cool

Here's possibly the most elegant summer shirt sold in a shop. The 2-in.-high collar makes that "show of linen" associated with custom tailoring, and the distinguished diagonal-weave broadcloth and superb details by Enro complete the impression. White and soft shades.
