FOREWARNED IS FOREARMED.

In most diseases, cure depends upon the promptness with which remedies are administered. If the remedy be taken when symptoms of disease first manifest themselves and before the normal strength of the body is greatly impaired, the complaint may often be checked and cured in the beginning, the sufferer thus escaping sickness of perhaps a fatal character. This is especially true of complaints to which the young are liable.

First symptoms are often neglected, simply because no effective remedy happens to be at hand, and it is not until the disease has gained considerable headway that means are taken to arrest its course. Alas, how frequently these means prove too late!

Every household, therefore - and, for that matter, every individual - should be provided with a few simple remedies for the common complaints to which all are exposed. As no complaints are more common than those of the throat and lungs, a safe and efficacious anotyne should always be within reach. We have been impelled to make these

cautionary remarks by happening to notice in a recent paper the case of a child who would, undoubtedly, have died of croup had there not been in the house part of a bottle of Ayer's Cherry Pectoral. The following incident related by the father of the little one, should certainly impress every parent with the necessity of being forearmed

for a similar emergency: --"One of my children had croup. The case was attended by our physician, and was supposed to be well under control. One night I was startled by the child's hard breathing, and on-going to his bedside found him strangling. . He had nearly ceased to breathe. Realizing that the child's alarming condition had become possible in spite of the medicines already administered, I reasoned that such remedies would be of no avail. Having part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses, at short intervals, and anxiously waited results. From the moment the Pectoral was given, the child's breathing grew easier, and in a short time he was sleeping quietly and breathing naturally. The child is alive and well to-day, and I do not hesitate to say that Ayer's Cherry Pectoral saved ---his life." 3____
