a large projection caused by the head of the dislocated femur pressing against the flesh. There was a corresponding depression in the groin, deep and dissolored, with the surrounding flesh shrunken and unnatural in appear ance, indicating the point where the head of the dislocated bone belonged. The surgeon took the leg in his hands, drew it up at right angles to the body and then gave a series of rapid twists and pulls. He then pointed to the apparent. The ugly protusion was gone: the depression beside it was gone too, and the entire hip appeared like the other. No knife was used and nothing had been done, as was formerly believed indispensable, to prepare the socket for the presence of the dismovement, which showed a knowledge
