DETERMINED TO DISCOVER

Playing in Industrial Undertakings. Chicago, June 7 .- Row after row of at the Structural Materials Research Laboratory at Lewis Institute in Chicago. It is probably the only collection of ts kind in existence, and the information contained on the labels of the bottles gives an interesting insight into the part that science is playing in modern industrial undertakings.

This "sand-library" was started ten years ago, and specimens have been added from time to time until there are more bank, and that Hedgecock paid slightly a member of the "liquor squad" of the than 2,800 different bottles of sand in more than \$12,600 of the bank's money police force. ada, Cuba, Mexico and other foreign when it was closed.

Each sample has been carefully tested. and the results of the test an - kept on the files. They include the source of the specimen, the grading, silt content and the results of the colorimetric test for organic impurities. In most stances mortar and concrete tests also have been made. The reasons for the tests were to ascertain the suitability of the various sailds for concrete and mortar work.

The experiments with the various sands were undertaken at the laboratory as a part of the work of ascertaining methods that will assist the concrete user in obtaining the best results in the use of
