listened to that insidious suggestion: "You ought to go on the stage." . . . And who among them will go home a failure? Instead they stay on (going from one less expensive room to a lesser, drifting slowly down the scale. Some with real talent. Thousands without.

The greatest chick losses occur during the brooding period which makes it necessary to clean the house thoroughly before the chicks are placed in it.

"To go about having a sanitary should first scrape all the old manure and dirt from the lower side walls and floor of the house and clean the water containers. mash hoppers and other equipment used in the house," declares H. C. Gauger associate professor in the poultry department of State College. "After this thorough mechanical cleansng has been done, the lower side walls, floor, water containers, feeding equipment, brooder stove and canopy should be scrubbed with a lye solution made by dissolving one pound of lye in ten gallons of hot water. A stiff bristle broom may be used to apply the solution. This lye mixture will not only further cleanse the house but gun, he may use this instead of the lye solution."

After the brooder house has been much to revive the plants. thoroughly cleaned, it must be dry soil, sand or gravel.

of wire frames on which to place ground. the feeders and water containers.

Do not crowd the chicks in the face. house, Gauger says. About six

Top-Dress Grain

Investments in nitrogenous ferti-

yield better results than usual, due help oats.

to the greater need for restoring small grain which has been heavily damaged by the cold spells during the past few weeks.

During recent years the North Carolina experiment station has found by tests the relative value of arious nitrogenous materials. With wheat, for example, a spring topdressing of 15 pounds of nitrogen (equivalent to 100 pounds of nitrate of soda or 75 pounds of sulphate of ammonia) to the acre has increased the yield by five bushels.

On heavily acid soils nitrate of soda produces larger yields than sulphate of ammonia. On soils that have been moderately limed there is little difference betwen the two materials. Sulphate of ammonia, however, gives best results on soils where excessive amounts of lime have been used.

At present prices, 100 pounds of nitrate of soda cost about \$1.75 and sulphate of ammonia about \$1.50 Five bushels of wheat valued at 90 cents a bushel are worth \$4.50, or \$2.75 more than the cost of nitrate of soda and \$3 more than the cost of sulphate of ammonia.

Since the nitrogen fro a sulphate of ammonia can be provided at a lower cost, this type of fertilizer is recommended for soils that have been limed recently. On acid soils, however nitrate of soda is best.

The top-dressings are not fully Diego Rivera is again in the effective unless applied early. In the Piedmont it should be applied from March 1 to 15 and in the in Rocketting of the had included mountain sections between March 10 and 25. In all cases the topmural composition. And now the dressing should be applied when Kerr immediately began laying wheat first starts to spring growth.

Make Farm Plans

Growers who have signed cotton or tobacco reduction contracts will find it helpful to plan systemati-Of all futile things for a woman cally for the best use of the acreage to do, we can think of none more rented to the government, says futile than a forty-year-old telling Charles A. Baseball's Greatest

NEW YORK ... John J. McGraw (above), 60, called baseball's greatest figure, died last week with his beloved New York Giants as world champions. It was McGraw who picked and developed Manager Bill Terry and turned over to him the management when health failed in 1932. No man was happier than McGraw last Fall when the fighting Giants beat Washington for the world title.

Kerr Gets Ready To Push His Bill For Tobacco Cut

Following a favorable report on the Bankhead compulsory cotton reduction bill by the committee on agriculture in the House of Representatives, Representative John H. tobacco follow hard on the heels of the Bankhead measure, according to a newstory by Robert E. Williams According To Needs in The News and Observed. Mr. William wrote:

> The Bankhead bill as reported has been greatly modified from the original draft and now closely resembles the Kerr bill which was drawn by officials of the department of agriculture. It is expected that the bills will bear even closer resemblance to each other before final enaciment. The original Bankhead bill would

have prohibited the ginning of more measure, the tax being first placed The total amount of such crops at 12 cents a pound, later reduced and in the final draft to 10,000,000

been producing, the grower may tax of 25 per cent on the selling slightly heavier application than find it convenient to reduce a price. As both bills now stand they trees on clay soils and orchards in crop of which he has been growing provide for rebates of the tax sod require more than those in cultoo much, so that he can increase through certificates to be issued to another crop. Or if he likes, he the growers to cooperate in the reduction campaigns. The provision For Healthy Chicks rented acres and reserve the other has also been made as to both be tested for seed in Yadkin county going in for socialism on the one land for crops to be marketed. On v crops for the inclusion up to five crops for consumption at home can per cent of farmers who could not grown seed. The difference in yield, the reduction campaigns.

Price Fixing Appears Headed For Doorstep Of The White House

WASHINGTON. Mch. 7.-The price fixing issues, in stark and direct fashion, may shortly be placed is intent upon fulfilling a recovery has already shown its strength on the White House door-step, program mapped out last summer against this in one test. John A. Simpson, militant head of and is going to focus main efforts the farmers' union, left tonight for of the government upon this. Des Moines, where he plans to attend a conference of western governors, most of whom are already committed, in some degree, to pricefixing with respect to agricultural commodities.

The thing that has given new life to this issue, or demand of the price for milk, in the interest of the dairy people, when such action has been taken in behalf of the general welfare. Now Simpson and his associates will take the position, ton, that the opposition does not have a leg to stand on, that price-

A number of the farm organizathem take the view that a frank system of price-fixing, going direct to the heart of the trouble, instead of resorting to allotment plans, processing taxes and now the proposal to control cotton production by resort to a prhibitive tax, would be the part of wisdom. They make Home grown Irish potatoes will the point that there is no need of of foreign markets on the other hand, that simple fixing of prices under government supervision on that portion of the crops domestically consumed, selling the surplus for whatever it will bring in the world markets, would be far better. There is the possibility, there-
