Proper Mixing Of Lime Soil Is An Important Factor

By FRANK REAMS County Ext. Chairman COMING EVENTS

March 28: Area Cotton Ginners Group meets at Overton's Barbecue - 7:00 p. m.

April 3: Inez Community Club meets - 6:30 p. m.

Records

Here is a fashion note for designers and manufacturers of farm workshirts. Make top front shirt pockets extra big and sturdy. Have space for several pencils and while so arranging, reinforce the seams so they don't poke through. Sew in some fasteners at the top so that those valuable notebooks cannot fall out into the grain bin or even

worse, land in a mud puddle. In this present day struggle, those small notebooks are becoming as much a pulse of the farm operation as the necessity of the heartbeat the notebooks. A amounts to the same as los-

ing one's shirt. Keeping records will help a producer know his current financial situation and may be helpful in guiding him to a successful operation. It can be safely said, then, that a five cent notebook is easily worth \$1,-000.00 or more.

Mix Lime With Soil

Mixing lime with soil should be easy but in practice it is a different matter. To derive the most benefit from lime, it must be mixed with the surface six to eight inches of soil. This is necessary because it moves very little from point of application and its beneficial effects are limited pretty much to where it is applied. This very fact makes the satisfactory application of lime rather difficult.

Lime is most effective when intimately mixed with all the soil particles that make up the surface six to eight inches or "plow layer". Consequentrecord these days ly, not only do we have to get the lime down in the soil.

it has to be mixed with the soil as well.

The best way to apply lime will depend on your equipment and available labor. One possibility and one that assures a good mix is to apply one half of the lime before plowing, disc two times and then plow. Follow this by applying the remaining half and again disc it two times. Admittedly, this is the most expensive method, and possibly should not be used except where more than two tons of lime are needed and quick results are desired, such as would be the case near planting time.

A method that is frequently used for more moderate applications is to apply the lime before plowing and then disking the land two or three times to a depth of four to six inches.

Applying lime and getting good results is not easy. Mixing it to plow depth is most important. The agricultural lime that we use in North Carolina is limestone rock that has been ground to a fineness required by North Carolina law. Limestone rock, even though finely ground, does not dissolve readily in water, therefore, we have to place and mix it with the part of the soil that we want it to effect.

Another thing, have your soil tested first to check lime

Tour

Observed attending the Industrial Tour from Warren County held at Smithfield last week were: Ellis E. Fleming, J. W. Mavfield, W. M. Fleming and W. B. Ellington Among the many statements made on the tour by this group, this statement more or less summed up the trip, "more Warren County people need to see what is going on here and maybe our citizens would become more active in a balanced industrial and agricultural economy."

Electric Power

During 1966, the nation's electric power companies bought an estimated 228 million tons of coal, more than any other industry. Nearly half of all the coal consumed in the United States is used by electric utility systems to generate electric power. A large portion of the coal purchased was from the Appalachia region.

Alston Comments On Fire Company Record

Commenting on a news story | the late Baker Plummer, was in this newspaper last week, McCarroll Alston, assistant Fire Chief, said yesterday that curing the 33 years that he has been a member of the Warrenton Volunteer Fire Company that the company has never had a home to burn to the extent that only the chimneys were left standing. A few have been badly burned, he said, but were reparable.

Alston's comments were brought forth by an article taken from the Congressional Record, where it had been inserted by Rep. L. H. Fountain, stating that the Warrenton Fire Department had not lost a home by fire in 99

A few years back someone sent into the office of The Warren Record a copy of The Warrenton Gazette, published prior to 1870. Among the news articles in this old paper was one stating that a mass meeting had been held in the court house to provide some form of fire protection for the town. As a result it was agreed that two companies should be formed, one white and the

other colored. Whether or not a white company was ever formed is not known, but as the result of that meeting a company was formed by the late John S. Plummer and exists to this day at Warrenton. Later, Plummer served as president of the North Carolina Colored Volunteer Fire Company for many years, and his son,

also an officer of the State Association for many years.

The local company was the subject of a feature story in The News and Observer, issue of Jan. 27. As a result of this article MaCarroll Alston, as assistant fire chief, received many nice letters of commendation. Among these was a letter from Mrs. Robert L. Warren of Dunn, who is the former Miss Jessie Allen of Warrenton, who has many relatives in Warren County. Her letter, under date of Jan. 28, addressed to Alston, reads as follows: Dear Mr. Alston,

"Congratulations on the enviable record of your fine Fire Department. As a child, I well remember those exciting fire drills, and the names mentioned in The News and Observer of January 27 are familiar to me.

"My parents, Mr. and Mrs. Howard Allen, moved to Dunn from Warrenton in 1901 wher I
