We Have the Most Beautiful Line of wedding invitations and announcements. Times and Tribune Office.

Sloop Reunion.

The third annual reunion of the descendants of Conrad Sloop will be held Tuesday, August 21st, 1923, at Lutheran Chapel Church, near China Grove, N. C., beginning promptly at 10:00 a. m.

The program follows: Devotional exercise—Rev. C. A. Brown.

Welcome address—Bruer Sloop. Welcome song.

Response—Crawford Sloop. Hymn—All Hail the Power of Jesus Name.

Address: Rev. B. S. Brown. Subject, "One, One."

Male quartette, Landis and Mooresville.

Address: Rev. Herman Cooper. Subject, "Three G's."

Election of officers, reading of minutes, etc.

Solo—Chairman D. A. Sloop. Dinner.

Devotional exercises—Rev. C. P. Fisher.

Hymn—"In the Cross of Christ I Glory."

Address: Rev. J. H. Keller. Subject,

"More Than Patriotism."

Duette. Address: Rev. M. L. Ridenhour. Subject, "Reunion."

Song—Words and music by the Author. Male and female quartette, Mooresville.

Closing song. Benediction.

The public is invited to come, bring well filled baskets and enjoy the day with us.

D. A. SLOOP, President.

J. H. SLOOP, Secretary.

F. K. SLOOP, Assistant Secretary.

C. L. SLOOP, Treasurer.

Considering that the population of the United States is made up of virtually all nationalities, it is a surprising fact that only two Presidents have borne other than British surnames. These are both Dutch, Van Buren and Roosevelt.

The record made 30 years ago by the New York Central Railway engine 999, in its run between Buffalo and New York, has never since been equaled, 112 miles an hour being attained at one stretch.

WEEVIL IS BEING CONTROLLED BY CALCIUM ARSENATE POISON

Field Experiments Show That When This Preparation is Dusted on Cotton, Puncturing of Squares is Checked.

Aberdeen, Aug. 6.—Although the weevils have become increasingly numerous throughout the southern counties of the state during the past week, they are being held under the control by night applications of dry calcium arsenate by the larger cotton farmers who are using this method of combating them, state Dr. R. W. Leiby, who is in charge of the State College and experiment station boll weevil laboratory here.

The entomologists predicted a heavy rise in the infestation of cotton fields to take place during the latter half of July which was based on their laboratory studies of the development of the weevil. The infestation mounted to the point where 10 per cent. of the squares were punctured within a few days, and when this point was reached, the poisoning of the cotton plants was begun by the larger cotton growers who had prepared to fight the weevil according to the methods approved by federal and state entomologists.

Study of Boll Weevil.

Extensive studies of the habits of the weevil are being conducted here in the laboratory, in connection with the control experiments which are being carried out on several cotton plantations in Hoke, Moore and Scotland counties. On the plantation of R. F. Stewart in Hoke county the cotton has already been dusted twice with calcium arsenate, the 10 per cent. dusting point having been reached on July 24. On a 24-acre field on this plantation, one-half of the field was dusted on the night of July 25 and again on July 30. Six pounds of poison were used in each application. On August 1st 2,000 squares were examined in each half of the field to ascertain the degree of infestation. That part of the field which had been poisoned twice showed nine per cent. of the squares punctured, while the other part of the field which was not poisoned showed an increase of from 10 per cent. on July 24 to 26 per cent. on August 1st.

"This saving of 17 per cent. of the squares I consider more than satisfactory," says Mr. Stewart, "and we will surely beat the weevil this year. Of course, we are going to put on two or three more applications, and it will cost me about seven dollars an acre, but I am now convinced that dusting will give us a good return on our investment and that by dusting we can make a bale to the acre in spite of the weevil." Mr. Stewart reports that night dusting is not as big a job as he thought it was. He has picked certain men to do the night dusting work who do not work during the day. These workers once accustomed to the night dusting prefer it to day work.

Good Results Secured.

Similar results are being secured on other plantations, stated Doctor Leiby. On the 200-acre cotton plantation of Carl Buchanan extensive examination of the squares on July 24 showed that eight per cent. of the squares in one field were found punctured. One-half of the field was dusted on the night of July 28, using seven pounds of calcium arsenate to the acre. On July 31 the undusted parts of the field showed 17 and 11 per cent. of the squares punctured respectively, the undusted part having increased nine per cent. while the dusted part increased only three per cent.

Efforts have been made by the entomologists here to control the weevil in some fields by applications of sweetened poison. According to Doctor Leiby, several fields have been treated three to five times so far this season and all fields in which weevils were originally present show from two to 36 per cent. of the squares punctured at this time. His investigations indicate that the continued use of sweetened poisons fail to hold the weevil in check. Cotton planters hereabouts are having similar experiences, one prominent Hoke county planter having recently purchased a three-row dusting machine with which to apply dry calcium arsenate after having used 20 barrels of a widely advertised sweetened poison with unsatisfactory results.

Infestation Irregular.

Entomologists Leiby and Harris report that the infestation of the weevil is decidedly irregular. There are many fields in which the weevil has not as yet done great damage and in which dusting to control the weevils is not yet necessary. The large cotton planters are keeping a close watch on the activity of the weevils and when the dusting point of 10 per cent. is reached in one of their fields, several applications of poison are made at intervals of each five nights. If a field shows less than 10 per cent. of the squares punctured the cotton is not then dusted. According to Doctor Leiby the cotton plants shed a high percentage of their squares normally and to wait until 10 per cent. of the squares are punctured does not mean that the crop will be reduced by 10 per cent.

Cotton plants throughout the southern counties of the state are in exceptionally good condition.

The frequent showers while aiding the plants are favorable to weevil multiplication, and heavy damage is looked for in many fields where farmers are not prepared to dust, before the crop is made.

Yost and Stirewalt-Pless Reunion.

A joint programme has been issued of the twenty-first reunion of the Yost Generation and the thirtieth reunion of the Stirewalt-Pless families to be held at Ebenezer E. Church, Wednesday, August 15th, 1923, beginning promptly at 10 a. m. The programme is as follows: Hymn. Devotional Service—Rev. C. P. Fisher. Business: Election of Officers. Male Quartette. Welcome Address—Rev. Paul L. Miller. Duette. Response—Rev. C. R. Pless. Male Quartette. Address—Rev. J. L. Yost. Solo. Address—Rev. J. C. Leonard, D. D. of Lexington, N. C. Dinner. Everybody cordially invited to come and bring well filled baskets. Refreshments will be served on the grounds. J. B. YOST, Pres. REV. J. L. YOST, Vice-Pres. DR. B. A. STIREWALT, Sec. GEO. H. PLESS, Treas.

During the entire first quarter of the last century, from the death of Washington, in 1799, to July 4, 1826—in the administration of the sixth President—a day when both John Adams and Thomas Jefferson expired, the nation was not grieved by the passing of a former chief executive.

The bricks for the first brick house in Philadelphia, built by William Penn, were brought from England at a cost of \$25,000.
