

This is A Studebaker Year

STUDEBAKER HAS GONE FAR BEYOND CURRENT PRACTICE TO MAKE THESE CARS THE MOTORING FEATURE OF THE YEAR. THEY EMBODY EVERY IMPORTANT IMPROVEMENT KNOWN TO FINE CAR MANUFACTURE.

Meet us at the Fair and hear the Talking Studebaker

ACCESSORIES

We have many conveniences which will add greatly to the pleasure of driving in stock and which can be installed at a small cost in a few minutes. A spot light, for example with extension cord, is real handy on a dark night when anything about the car needs attention.

REPAIR SERVICE

When your car leaves our garage, you can depend on the work you ordered done, being as thoroughly executed as it is possible for first class materials and experienced workmen to accomplish. Our labor saving equipment reduces the working time, and enables us to make a very reasonable charge for reliable work. Repairs are made to any make of automobile or truck. You can depend on getting your car, at the time we say it will be done. Ford parts (the genuine kind) on hand.

\$995

TIRES

Good Tires are the foundation of motor-ing comfort. Your freedom from tire troubles will depend on first having good tires (such as we sell) and then looking after them properly. Let us take your tire troubles off your hands by inspecting your tires from time to time and advising you as to the minor attentions they need.

CONCORD, N. C.

HISTORY OF STONEWALL TRAINING SCHOOL

(Continued from Page Thirty-eight.)
sible by a donation of Mr. and Mrs. W. N. Reynolds, of Winston-Salem. It houses considerable work stock, much of the products of the farm, the farm machinery; and in one section is established, for the want of a better one, the dairy outfit and stock. This temporary quarters for the dairy barn has never been satisfactory and is inadequate for the growing herd of Holsteins and Jerseys, which have been developed on the farm.
5. The chapel, built of Rowan granite, is the pride of the institution. Funds for its building were furnished by the state organization of the King's Daughters and Sons. The interior is splendidly furnished. The pews are handsome, the electric lighting modern, and the organ donated by the Stonewall Circle, of Concord, is a North Carolina product. Plans are making whereby the King's Daughters will substitute memorial stained windows to take the place of the plain ones in the Chapel. The Junior circle, of Concord, having already installed one. This chapel could not be duplicated for twenty-five thousand dollars today, and yet it never cost the state or the school one single cent—it is the expression of the love and service of godly women throughout the state.
6. The main well from which the institution gets its water supply is more than 100 feet deep, drilled through solid rock from within five feet of the surface. A splendid pumping outfit lifts the water into a large steel tank more than 100 feet high. A challenge has been issued, and is now renewed: "handsome reward for the discovery of one germ in the water supply that should not be there."
7. A brick conservatory that proved unsatisfactory and unfitted for the purpose intended, has been converted into a modern sweet potato drying house. More than 700 bushels of potatoes are stored in it, and it is in its third successful use.
8. The largest of the whole plant is the school building, whose erection was deferred until sufficient funds were available to erect that which would not only meet present but future necessities for equipment.

Scene Showing Setting up Exercises at the Jackson Training School

many years to come. What cost the school fifty thousand dollars could not be duplicated today, as prominent builders say, for less than one hundred thousand dollars. This is believable, for in its erection the school furnished much labor, did hauling, grading and other services that would have reached into the thousands had it been employed. By this method, expense was saved; and, in the employment of our own folks, it served to reveal the boys as well as to us, for the first time, just what their trend it. This is vital. Many a failure has occurred in well organized society from an attempt to do that for which there is lacking in the individual a natural trend.
Besides modern school rooms, properly lighted, there are many other rooms and space much needed in the conduct of the institution. In the rear, not showing in the picture in this issue, there is a large two story wing, in which is a modern auditorium of considerable capacity, and under this a gymnasium room. There is space for a swimming pool and other meet present but future necessities for equipment.

9. A sewerage system with proper septic tanks has been installed and serves every building on the campus.
10. A side track, connecting with the Southern railroad, is now building. If the matter of drainage and convenience, especially since considerable construction work is going on, there will be an immense saving of expense and time.
11. Light and power are secured from the Southern Power Company over a line constructed by the institution, which connects with the distributing station at Concord, three miles distant. The installation of this electric connection has proved a large saving and much in convenience, thus dispensing with the use of oil for lights and gas engines for power.
The value of the personal property which has been accumulated by purchase, by increase and by donation, is immense for an institution of a few years' existence. But it is primarily a testimonial to wise management by the officers and to the generosity and liberality of friends in the State.
We plead guilty of entertaining very strong reasons for believing that the reader, forming a mental picture of the

plant from the foregoing enumeration and description, will consider this a very satisfactory growth and development in a short period of thirteen years. And when the reader recalls that this development, involving a pronounced innovation in the school activities of North Carolina, and all the while it being necessary to contest every inch in going forward, he will regard the achievement little short of marvelous.
THE OBJECT OF ALL THIS ENDEAVOR.
This far in this story the writer has been dealing with lands, and material, inanimate things. Of these there have been numerous inquiries by interested friends. The foregoing exhibit, we take it, is complete enough to convince the reader that behind all this was a specific design to reach a specific point in the accomplishment of a specific work in the state.

We have come to the consideration of that phase which concerns the one real, outstanding reason for any and all human activity—the preservation and conservation of life, human life—that life that has its dwelling-place in an image of

God—an honor and a glory vouchsafed to no other creature or thing of the universe. Such a thing must challenge the very highest and best service of society and man.

The promoters of this institution, and who have labored in its growth and service, have been brought face to face to the conclusion that the welfare of childhood has too long been given the second place in the consideration of the authorities. The conclusion seems unmistakable that all measures of success are the measures of the dollar and wealth. In this mad struggle for material wealth, which has stung most of our people, the standard thoughts of former days in the welfare of childhood, its protection and

moral safety, and the practices regarded sound and worthwhile, have been discarded or ignored. We have come to think too much in the saving influences of the dollar rather than the character of that life which is unshakable and eternal. Too many believe that wealth secures position in society—they forget that society ends at best, just a few years hence.

In this mad rush, small boys, becoming a law unto themselves, underprivileged and overprivileged, wiser than fathers, in a measure unrestrained and forgotten, find themselves mixed up with the law. Their number is frightfully increasing. It is a condition that challenges our most serious concern. From (Continued on Page Forty)
