**RESALE OF LAND.**

By reason of a 5 per cent increased bid having been placed on the former sale of the lands hereinafter described sold on April 17, 1922, and by direction of the Court, as Trustee in that deed of trust executed by John Blackwell on November 10th, 1912, recorded in Book 2, page 118, Registrar's Office of Person County, I will

**SATURDAY, MAY 13th 1922.**  
at 12 o'clock Noon at the Court-house door in Roxboro.

Sell to the highest bidder at public auction for cash the following described lot or parcel of land, to-wit: Lying and being in Bushy Fork Township on both sides of the Roxboro-Bushy Fork public road beginning at a rock and pointers in W. A. Warren's line S. W. corner of lot No. 4; thence S. 25 degrees W. 2 chs. and 38 links to a rock N. W. corner of Lot No. 2; thence with Lot No. 2 S. 83 degrees E. 37 chs. and 70 links to an iron in the Roxboro road; thence with said road S. 36 1-2 degrees W. 1 ch and 35 links to an iron in said road; thence S. 78 degrees E. 25 chs. to stake S. 86 degrees East 37 chs. and 90 links to pointers N. E. corner of No. 2; thence N. 1-2 degrees E. 3 chs. and 55 links S. E. corner of No. 4; thence with No. 4 N. 86 degrees W. 37 chs. and 90 links to a stake; thence N. 78 degrees W. 31 chs. and 10 links to iron in Roxboro road; thence with road N. 38 degrees E. 1 ch and 40 links to an iron in said road; thence N. 83 degrees W. 40 chs. and 90 links to the beginning, containing 39 3-4 acres more or less and being Lot No. 3 in the division of Lewis Blackwell lands. See deed Geo. Blackwell and others to Jas. Blackwell, Book 22, page 95, Person County.

Bidding at this sale will begin at 3:17:00.25.

This April 25th, 1922.  
L. M. Carlton,  
Apr. 26th 31s.

**EGGS AND STOCK reduced.** Prize peris S. C. Reds, 112 prizes. Cockerels and pullets for sale.—Mrs. John Kerr, Durham, N. C.

**POULTRY FLOCKS**

**TRAP NESTS HELP BREEDERS**

Enable Poultrymen to Find Profitable Layers by Selecting Laying Hens.

(Prepared by the United States Department of Agriculture.)  
Trap-nesting hens do not appeal to the average farmer and backyard poultryman as being practical. Besides the original cost of making the nests there is the extra labor required of looking after the layers. However, some facts that have been

Profitable Layers Found by Use of Trap-Nest.

learned as a result of using the trap nest may be applied in the improvement of the flock, say poultrymen of the United States Department of Agriculture. For instance, the trap nest has shown that the late mouter is the most profitable bird in the flock. Now, with the use of the trap nest, a man may select the late mouter and be sure that he is picking the cream of the flock. And it seems reasonable to believe that this characteristic breeds on from generation to generation.

**AX IS BEST FOR EGG EATERS**

Habit Spreads From One Fowl to Another and Unless Checked Affects Whole Flock.

(Prepared by the United States Department of Agriculture.)  
Egg eating sometimes becomes a serious vice in a flock, the fowls becoming very fond of eggs when they have learned to eat them. The habit spreads from fowl to fowl and unless checked will often spread through the whole flock. Egg eating usually begins through accident by eggs being broken or trodden. See that the nests are properly supplied with straw or other nesting material and have them darkened, so that if an egg is accidentally broken the fowls will not be likely to discover it. Supply plenty of lime in the form of plaster shells, bone or similar substances to insure a firm shell. As soon as it is discovered that a fowl has formed the habit, the fowl should be removed to prevent the spread of the vice. Once formed, it is difficult to eradicate, and the safest remedy is the death penalty, say poultry specialists of the United States Department of Agriculture.

Fowls sometimes pluck feathers from themselves and from each other. This is often caused by too close confinement, by the presence of insect pests, or by improper feeding. When some of the fowls of a flock have formed the habit slightly, a wide range with a change of diet, including a plentiful supply of animal feed, and freedom from insect pests, will usually correct the evil. Above all, see that the fowls have plenty of inducement to exercise. If the habit becomes well formed it is very troublesome and may necessitate the killing of some of the fowls in order to stop it.

**YEARLY EGG LAYING PERIOD**

Increase Made at Massachusetts Experiment Station by Selection of Pullets.

Dr. H. D. Goodale, research biologist in poultry at the Massachusetts Experimental station, stated that the yearly egg-laying period of a flock of hens at that place had been increased by an average of 53 days by egg-selection from early-laying pullets. This, he said, had resulted in an increase in the number of winter eggs, raising the annual average from 121 to 185. Poultry breeders should aim to eliminate broody hens from breeding stock, also the birds idle longest in the winter months.

**POULTRY NOTES**

- Keep house and yard clean.
- Provide roosts and dropping boards.
- Provide a nest for each four or five hens.
- Save the manure. It is worth money if treated properly.
- The early hatched chick becomes the early laying pullet next fall.
- Make the house dry and free from drafts, but allow for ventilation.
- Kill and eat the poorest hens in the fall when they begin to molt and cease to lay.

**POULTRY**

**CIRCLES HELP FARM INCOME**

Excellent Example of Way in Which Home Demonstration Workers Are Aiding Farmers.

(Prepared by the United States Department of Agriculture.)  
Home demonstration workers realize that before substantial improvements can be made in rural home life there must be more cash income with which to install conveniences, correct defects, beautify the surroundings, or improve clothing. On most farms the production and selling of eggs and poultry offer the best immediate possibilities for increasing the income. The home demonstration agents of the United States Department of Agriculture and the state agricultural colleges, therefore have turned their attention to giving help in this field whenever there seemed to be need of it.

The poultry project at Orchard Gardens community, Dakota County, Minn., is an excellent example of the way in which home demonstration work thus meets a real want. The home demonstration agent helped to interest people in poultry raising as a source of income, which would mean income during the winter as well as during the summer.

The poultry project was started by the poultry specialist. During the project the members formed a poultry association. The first work of the association was to pool their orders for feed, thus saving a considerable sum. The second step of the association was to organize an egg circle to make plans for the marketing of the eggs. The egg circle was formed and by-laws adopted making provision for a guaranty that their product would be of excellent

Flock of Laying Hens in Good Health.

quality. Each member was furnished with a stamp with the name of the egg circle and a number identifying the eggs. In case a bad egg was shipped, it could be traced to the owner.

Through the home demonstration agent a market for the eggs was found with the Women's Community Council of Minneapolis, the office of the Minneapolis home demonstration agent being used as the distributing center. The production from the egg circle soon outgrew this form of marketing and the president of the Orchard Gardens Poultry association then secured a market for the eggs through one of the high-class markets in eggs and butter in Minneapolis.

**BAKED BONES FOR POULTRY**

Furnish Mineral Matter Which Is of Great Importance—Pound Into Small Crumbs.

Heavy bones of all kinds may be put in shape for chicken feed by baking until brittle, and then rolling or pounding into small crumbs. These baked bones furnish mineral matter which is of great importance in nutrition. Green bone is probably the best source of mineral matter, but green bone is not always at hand, and bones for baking are more or less abundant on every farm.

**LICE ARE QUITE INJURIOUS**

Parasites Have Been Known to Destroy Dozens of Turkeys in Short Period of Time.

Experienced turkey breeders agree that lice are the most dangerous to adult turkeys during the fall and winter. They have been known to destroy dozens of birds in a few weeks. The usual reason given is that the turkeys are unable to find dust baths at this season with which to fight the pest in their own way, and consequently, the lice get an unusual foothold.

**PROFITABLE TO RAISE DUCKS**

Fowls Mature Rapidly and Are Ready for Market at Ten or Eleven Weeks of Age.

One of the best sources of profit in poultry raising, particularly where market poultry is concerned, is in the raising of ducks. They mature very rapidly and are generally ready for market at ten or eleven weeks of age. If intended for market purposes, egg breeders they bring good prices if matured and held over until the breeding season.

**ONE MILLION ACRES LAND UNDER WATER**

**MEMBERS OF CONGRESS ARE CARRIED OVER FLOOD AREA**

Special Train Brought Through Over Two Feet of Water Gives Congressmen Vivid Insight Into Tragedy of River Flood Party Takes Steamer and Goes Farther On To South Stopping At Natchez Today—16,000 Persons Are Already in Need of Help—Growing Worse in Vicinity of New Orleans.

Vicksburg, Miss., May 3.—One million acres—25 percent under cultivation—mudated to a depth of from three to 15 feet, water-covered and rapidly disintegrating farm buildings, refugees housed in boxcars, tents, and railroad stations, and here and there a more persistent householder sickening to his dwelling despite the lapping of water against the thresholds, viewed from the windows of a special train which ploughed its way through more than two feet of backwater for a distance of 25 miles from Carey to Vicksburg, gave the congressional delegation surveying the ravages of the swollen Mississippi, a vivid insight today into the tragedy of the river flood.

Today's journey, the third day of the tour begun at Memphis Monday was through the "backwater" spreading over the Yazoo basin from Brunswick Gap and uncompleted stretch of the Mississippi river levee system north of Vicksburg and through the Yazoo river.

From Carey at present the north limits of the inland overflow—to Vicksburg, it was much the same sight—abandoned farm homes, here and there a knoll of high ground crowded with corralled livestock, a raft-moving to the neighboring hills, or railroad right of way with piled up household goods and refugees, and at intervals a house built on stilts with the occupant holding their ground making the best of the situation and apparently determined to stick it out.

Box cars, top floors of cotton gins, railroad stations and loading platform and tents pitched on the ridges which dot the generally flat lowlands, now are housing several thousand refugees, with the number expected to appreciably increase as the waters rise and spread further.

Approximately 2,000 are being car-

ried in box cars, 300 of which have been distributed on sidings at central points along the line of the Yazoo and Mississippi valley railroad in the overflowed area.

Members of the congressional party left the river commission steamer Mississippi abroad which the great part of the tour is being made, at Greenville early today and after an automobile ride to Leland for a view of neighboring plantations, curtailed by a heavy rainstorm, boarded a special train at the latter town for the rail trip through the flooded sections of Vicksburg.

After a visit to the national park here and a luncheon, the party re-boarded the Mississippi for a continuation of the southward journey.

Natchez, the next stop in the itinerary, is expected to be reached late tomorrow.

In its spread over the farm lands in the Yazoo basin the water ultimately will inundate sections of five counties—Issaquena, Sharkey, Kumphreys, Yazoo, and the northern part of Warren.

In many parts of the area already overflowed, seed was planted several weeks ago.

Joseph C. Logan, Red Cross representative who is directing relief work in conjunction with state and local officials, issued a statement today indicating that approximately 16,000 persons, mostly negro tenant farmers, already have been reported as in need of relief in Yazoo basin and several other counties of the south.

"Rationing" began a week ago in some sections. Thus far this week subsistence for 3,000 persons for a week has been distributed. It was estimated from reports made by field agents to the Vicksburg Red Cross headquarters that upwards of 40,000 persons ultimately will be in need of aid to tide them over until the water subsides. Food crops can be raised.

Mr. J. A. Noell, who died the last of January, was, my friend, in fact was a friend to every one. He remarked to me a long time ago that he harmed no man intentionally.

Thomas Frazier.

**SURL NEWS.**

The farmers are busy planting corn. Wheat, oats and clover are looking good. Mud Branch went dry last summer, consequently hock and line have played in hard luck this spring. Tobacco plants seem to be plentiful.

**Prices Down**

**CALORIC PIPELESS FURNACE**

Radical price reduction puts the cost of a Caloric so low that no family with a home to heat can afford to be without this modern heating plant.

At the new low prices the Caloric costs less than stoves necessary to heat the building. Costs less than a good piano. Costs less than a good home water system. Costs less than twice the price of a good washing machine. Costs less than twice the price of a phonograph.

Order a Caloric now because it is the greatest comfort and convenience you can have in your home. Because it protects the family's health and thereby the family's pocketbook. Because it pays every dollar of its cost in the fuel it saves.

Order now because prices cannot be lower—and by ordering now you will enjoy the comfort and save a good percentage of its cost this winter.

Do not delay. Winter is here in earnest. Every blizzard is an argument for Caloric comfort now. You take no risk. Our guarantee—your satisfaction or money back.
