BOLLWEEVIL CONTROL METHODS
approved by State & Government Experts

Production of cotton under boll weevil conditions is nothing more or less than a race between the setting of bolls on the plant and the multiplication of the weevils, scientists declare, and everything possible should be done to aid the cotton plants in winning this race.

One of the first steps in furnishing this aid is through preparation of the soil. A good seed bed is necessary to obtain the best results and it should be prepared early so as to have a firm, smooth and well settled bed at planting. Experts say that the importance of a well prepared seed bed can hardly be overestimated. Also, unfavorable weather conditions shortly before planting often prevents plowing at that time and early preparation does away with this risk.

Planting should be delayed until all danger of frost is past and the earth is warm enough to cause quick sprouting and a good stand. Early planting is recommended but it should be borne in mind that it is possible to plant too early so that the plants become stunted during the early days of their growth.

Plant if possible only selected seed of an early maturing variety, and of a staple not less than 7/8 inch. Information as to a suitable variety for your particular locality can be obtained from the county agent or the state college of agriculture. It is definitely proven that increased yields worth from \$10 to \$40 an acre may be obtained by planting selected seed. One bushel or more should be planted to the acre.

Cotton rows should be from three to four feet apart, according to the fertility of the soil, and spacing in the row should be from eight to twelve inches with from one to three stalks to the hill. Tests under various conditions have proved that thick spaced cotton matures earlier and yields more pounds to the acre than thin spaced.

The intelligent use of commercial fertilizers is an important step in the profitable production of cotton. Properly used it will both hasten maturity and materially increase the yield. Contents and their percentages depend on local conditions. The county agent or the agricultural college can supply information on this point. Only the well drained, fertile lands, and when available, early soils should be used. It will pay to produce cotton only on lands that will produce, under average conditions, at least one third of a bale to the acre.

Further information on the subject of boll weevil control may be obtained from the county agent, state college of agriculture or the National Boll Weevil Control Association, Room 220 Whitney Building, New Orleans, La.

Reduce the acreage and increase the per acre yield is one way to beat the boll weevil.

"We can if we will—we WILL control the weevil" by applying methods of control approved by state and government experts.

The boll weevil collects the profits on the cotton crops where proper methods of control are not applied.

More cotton to the acre, not more acres to cotton, and weevil control will put money in the bank for farmers.

"Do it right or not at all," say boll weevil control authorities.

"We drove the automobiles out of the Delta," said the boll weevils, "and we can drive the farmers off the farms if they don't stop us soon."

Save your money by saving your cotton from the boll weevil.

Weevil control will help farmers who help themselves by using the methods approved by THEIR experts.

Tests and experiments by experts prove that it pays to apply cultural methods of boll weevil control under all conditions and calcium arsenate in dust from where the soil will yield as much as one third of a bale to the acre.

Farmers should help their cotton crops to early fruiting and maturity before the boll weevils have had a chance to destroy them by planting selected seed and applying intensive cultivation.

Applications of calcium arsenate in dust form should be made on cotton when 10 per cent of the squares have been punctured by boll weevils. From five to seven pounds of poison should be used to the acre and the application should be repeated two or three times at four and five day intervals.

Others have proved that boll weevil control pays. Prove it yourself by using government methods and check the result on a small tract where control measures are not used.

Boll weevils go into winter quarters before frost occurs. Reduce the number by burning trash and burying the stalks as soon as the crop is gathered.

Apply calcium arsenate in dust form to boll weevil infested cotton when the air and the plants are moist, preferably at night.

Ask your county agent or write the state college of agriculture or the National Boll Weevil Control Association, Room 220 Whitney Building, New Orleans, La., about methods of boll weevil control.

STATE COLLEGE SUMMER SCHOOL.

The State College Record giving detailed information concerning courses to be offered, members of the faculty and other information about the 1924 Summer School, June 10-July 25, has come from the press and is being distributed. According to Director T. E. Browne, study of this bulletin will serve to correct an erroneous impression which many people seem to have secured, namely:—that only Vocational Courses will be offered. These courses make up only a small part of the Summer School instruction. Courses of College grade will be given in practically all subjects taught during the regular session wherever the number of students registering for such courses is large enough to justify the work.

These courses are open to any high school graduate, or person of equal qualifications, and may count either toward college credit, or academic credit on certificate. There will be general professional courses for teachers, and in addition special methods courses for High School teachers and principals, Science teachers, teachers of industrial arts and industrial education, and teachers of agriculture.

For the Professional courses in science-teaching, the Summer School is very fortunate in securing Professor Garfield A. Bowden, of the University School, University of Cincinnati, a man of large experience in teaching and supervising science, in schools below college grade, as well as an author of books on science for secondary schools.

Professor Edward W. Boshart, who comes to the College from Chicago University to give the courses in Industrial Education and Industrial Arts, has had a valuable experience in this field, as teacher and supervisor, in some of the best equipped high schools of the country, especially in the West Technical-High School, of Cleveland, Ohio.

Hall's Catarrh Medicine will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh.

"BEST IN THE LONG RUN"

(NOTE: Dr. Pierce is president of the Invalids' Hotel, Buffalo, N. Y., to which for 50 years past chronic sufferers have been coming for special treatment from all over the U. S., A., Canada, and foreign lands.)

Will Undo Much Evil By Dr. V. M. Pierce

Knowing the vast amount of harm wrought by diseases of the kidneys, and having had opportunity to observe the analyses and the successful methods of treatment in thousands of cases of kidney trouble at the Invalids' Hotel, I have recently given to the public the latest and perhaps most important of the Dr. Pierce home remedies, "An-uric" (anti-uric-acid) Tablets, which I now recommend to those who suffer with kidney backache, irregularity of urination, and the pains and disturbances that come from excess of uric acid in the blood.

"An-uric" can be had now at all the drug stores. The mere drinking of a cup of hot water each morning and a little "An-uric" before every meal should bring remarkably quick improvement. You may have kidney trouble and not know it. The danger signals are backache, depression, aches, pains, heaviness, drowsiness, dizziness, irritability, headaches, chilliness, rheumatic twinges, swollen joints, gout.

Old Folks' Ailments

"I began taking Black-Draught over fifty years ago and my experience with it stretches over a good long time," says Mr. Joe A. Blake, more, a Civil War veteran and former Virginian, who is now a prominent citizen of Floyd, Texas. "It is the best laxative I know of for old people. . . . A good many years ago, in Virginia, I used to get bilious and I found that

Thedford's BLACK-DRAUGHT

was the best and quickest relief I could get. Since I came to Texas I have these bilious attacks every now and then—a man will get bilious anywhere, you know—and I find that a little Black-Draught soon straightens me out. After a few doses, in little or no time I'm all right again." Thedford's Black-Draught is a purely vegetable liver medicine, used in America for over eighty years. It acts on the stomach, liver and bowels in a gentle, natural way, assisting digestion and relieving constipation. Sold everywhere. E-102

MONUMENTS AND TOMBSTONES

Anything in the way of Monuments, Tombstones or grave markers. Best most durable stone, at lowest prices. Everything guaranteed.

10 per cent discount on all work. Write or see **J. M. PHILPOTT, Roxboro, N. C., Rt. 1.**

EXECUTRIX NOTICE

Having qualified as Executrix of the estate of J. C. Gentry, late of Person County, N. C., this is to notify all persons having claims against the estate of the said deceased to present them to the undersigned on or before the 15th day of April, 1925, or this notice will be pleaded in bar of their recovery. All persons indebted to said estate will please make immediate payment.

This April 15, 1924.
Mrs. Susie Gentry, Executrix.

ADMINISTRATOR'S NOTICE

Having qualified as administrator of the estate of W. C. Oakley, late of Person county, N. C., this is to notify all persons having claims against the estate of the said deceased to present them to the undersigned on or before the 6th day of April, 1925, or this notice will be pleaded in bar of their recovery. All persons indebted to the said estate will please make immediate payment.

This April 5, 1924. 6ts. pd.
B. E. Bowles, Administrator.

EXECUTORS NOTICE

Having qualified as Executor of the estate of Ann E. Briggs, late of Person County, N. C., this is to notify all persons having claims against the estate of the said deceased to present them to the undersigned on or before the 19th day of April, 1925, or this notice will be pleaded in bar of their recovery. All persons indebted to the said estate will please make immediate payment.

This April 19th, 1924.
Daniel Long, Executor.

DR. S. RAPPORT AT DAVIS' DRUG STORE

BEGINNING DECEMBER 5th, Dr. S. RAPPORT of Durham will be at DAVIS DRUG STORE instead of the Hotel, every first Wednesday in each month, to examine eyes and fit glasses.

My next visit will be Wednesday JUNE 4th 1924
TO SEE BETTER, SEE ME. MY DURHAM OFFICE IS MAIN ST OPPOSITE POST OFFICE.

The Greensboro Daily News

A newspaper for all the people. That's our claim, and that's our aim. A virile, wide-awake paper, published in a progressive state, for a progressive people, who think ahead of the times.

Independent in politics, progressive and aggressive; carrying complete news reports, market quotations and reviews, sports and comics, and with a strong editorial page that is distinctly different—there's not a dull or uninteresting issue.

Circulation is constantly growing and has more than doubled in seven years. Regardless of your political views, your place of residence or your station in life, you ought to read this great daily newspaper.

MR. HOOVER URGES PEOPLE TO LAY IN WINTER'S SUPPLY NOW

Washington, May 11.—Secretary Hoover today appealed to the nation's coal consumers to prevent a coal shortage by laying in coal supplies during the summer.

He urged industries to purchase their stocks during the slack coal season to prevent congestion on the railroads during the fall, which he said would tend to increase coal prices and create a shortage.

The appeal was made in a letter to the secretary of the National and State Trade associations in the United States.

"The fall coal shortage," Secretary Hoover said, "always has the effect of increasing the price of coal and of seriously disturbing the whole economic machine. Security lies in repeating the storage performance of last year, by the manufacturers of the country taking reserves of coal during the months of May, June and July, thus foregoing the necessity of coal shipments during the peak period in competition with the household movement. Outside of strike years, these summer months are universally the period of lowest bituminous coal prices."

County Agent T. B. Bradon recently helped to overcome an outbreak of hog cholera in Martin County by treating 288 hogs for 13 farmers.

BOSSY FILLS FAIL WHEN FED SOYBEANS.

Raleigh, N. C. May 13 M. A. Holschouer who lives out from Salisbury on the Faith Road found that when he began to feed soybean hay to his cows this winter, he had to carry an extra milk pail to hold the additional flow. County Agent W. G. Yeager has reported the incident to the headquarters of the extension division at State College and here is how it came about.

Mr. Yeager went out to lay off some terraces for Mr. Holschouer and incidentally told the farm owner that soybeans would make good hay while at the same time the crop would help to improve his land and prevent it from washing. The seed was bought and the incident forgotten as only one small matter in the life of a county agent. But the hay was grown and cut. Rain damaged it somewhat before Mr. Holschouer boys could house it but it was finally gotten in piled away in a corner of the loft and forgotten.

Last winter, the boys had been feeding the mules their regular hay ration until they got down to the soybean hay. It didn't look good so they asked Dad what to do with it. "Oh, feed it to the cows, I reckon," was his reply. They did, because on many farms, feedstuff not good enough for the work animals is put off on the old milk cow.

But here's what happened. Though in the dead of winter with no pasture to speak of, the milk flow from the six cows began to increase. In a few weeks it was necessary to take more pails to the barn. In fact, Mr. Holschouer says that never before did his cows give so much milk in the winter and he was surprised at the way the flow continued to hold up.

He finally discovered that his boy were giving the animals all the soy bean hay that they would eat and early this spring he dropped in at the County Agent's office and said, "Several of us out my way want to buy some soybean seed this spring." They made up a joint order and good feeding has received another boost in Rowan County.
