

best way to have more fertile soils and to gradually build up their lands is by using the tandem team of lime and legumes. A number of demonstrations show that lime is necessary for the best growth of most legumes and the legumes, in turn, when plowed under and incorporated into the soil help to make the crops following return greater average yields.

Practical Nurse Tells

Mrs. N. E. Snow, of Route 1, near Paris, Tenn., tells the story of her experience as follows:

"I am 62 years old and I have been a practical nurse for more than 20 years, taking mostly maternity cases. One of my daughters suffered from cramping at . . . She would just bend double and have to go to bed."

CARDUI

The Woman's Tonic

was recommended to her and she only had to take about two bottles, when she hardly knew that it was . . . she suffered so little pain.

"My youngest daughter was run-down, weak and nervous, and looked like she didn't have a bit of blood left—just a walking skeleton, no appetite and tired all the time. I gave her two bottles of Cardui. It built her up and she began eating and soon gained in weight and has been so well since."

Cardui, the Woman's Tonic, has helped suffering women for over forty years. Try it. At all druggists. E-100

TO THE PEOPLE OF HURDLE MILLS AND VICINITY.

For many years the people of Hurdle Mills have talked of erecting a High School building in this community, but to my deepest regret it has not yet been erected. Good resolutions are alright in their place but if they are not backed up by action they are worthless.

Some years ago, about 1920, we had an election giving the people an opportunity to vote for or against a High School. I was very much surprised and disappointed when we failed to carry it, thereby leaving us with an old building, or rather an old shack unfit to stay in, in the summer, to say nothing of the cold severe winter months. This old dilapidated building is not only a critical reflection on the community but endangers the lives and safety of every child that is forced to attend school in it, as well as the lives of the faithful teachers of your child. To be fair about this old building we declare that it is no comparison to the stables and feed barns of the average intelligent farmer of Person county. With this kind of a building and so many bright children of school age, we see without a doubt that something must be done and it must be done immediately. It is useless to repair this old building, so therefore lets do the great thing and build a nice High School building, something that every person ought to feel proud of.

Our parents and grandparents attended school in these small crowded buildings and could get along with very little educating, but listen friends, we, the younger generation must have an education, or we are completely handicapped and are not even considered in the great race through life. We cannot get an education unless we have good schools, and to have good schools we must have good teachers, these we cannot hope to secure unless we have a decent place for them to teach in. No good teacher will teach in an old dilapidated fire and ice trap on a small salary, all the best teachers are seeking the best, and I glory in their spunk.

Listen parents of Hurdle Mills district, aren't we (your children) just as dear to you as children elsewhere? and don't we deserve the best the same as they? If so then won't you, in the name and for humanities sake if nothing else build us a High School.

Nearly every progressive community has established and is maintaining a High School and they are making progress that we can never hope to make without a good High School. Some people are opposing the plan because of the slight increase in taxes. Friends of Humanity this puny little increase in your taxes is a small item when we consider the cost of sending the boys and girls off from home to school, and too, many of them cannot leave home to attend school elsewhere, thus forcing many of them to go through life with little or no training.

If we don't get the High School, the county wide plan will be established and the taxes will be levied and collected any way, and I say, good voters of Hurdle Mills let's get a move on us and get the High School while

it is possible, then too, think of paying the tax and not having the school. You are bound to admit that you are not treating your child right unless you are giving them an education some how, some where.

Some time soon we are going to vote on this question of building a High School, and I feel that it is the solemn duty of every citizen, both male and female, to vote to help establish this High School. Vote for it regardless of whether you have a child or not, or regardless of the small increase in taxes.

Keep ever before you the Holy commandment of God, to love your neighbor, and then a little further, love his child. This will mean more for them than anything else you could do for them. Let the High School question be your chief conversation, both old and young until the foundation rocks are laid and the building erected, then we can and will rejoice over something worth while.

There is at present a nice big sum of money in the bank waiting to be used in Hurdle Mills High School, go to it folks and get the building and we, your children will show you that we have talent and can do things as well in Hurdle Mills as can be done any where in the universe. Will you fail us friends?

When this proposition was killed before I was too young to vote, but thank God I can vote for it NOW. The good women can vote this time and we are depending on them. We feel like they know what a good thing is, some men do not.

In conclusion, let me say, we have no building worth while and must build one of some kind before the opening of next session, and we will have to pay the taxes regardless of whether we get the school or not. Let's build a good High School while we are at it. It is the only thing to do.

May your heart and conscience lead you to do it.

Respectfully,
Rainey Hawkins.

UNIVERSITY SENIOR WILL TAKE FIGHT TO TRUSTEES.

Chapel Hill, June 9.—In a final attempt to obtain his diploma which University authorities have denied him because he admitted taking two drinks of liquor following examinations last week, J. R. Gaskins, of Greenville, N. C., a member of this year's graduating class at the University of North Carolina says he will take his case before the Board of Trustees at their meeting tomorrow and fight it to a finish.

At their farewell exercises this afternoon the members of the graduating class passed resolutions endorsing their classmate's stand. The defense of the student is that he imbibed only two drinks and went immediately to his room and retired and made no disturbance. His case came to light as the result of the antics of another senior who imbibed with him and later was seen on the campus acting disorderly when halted before the faculty executive committee which acted in absence of a student council. The latter student reported Gaskins and did not protest his own dismissal.

INSURE GRAPE CROP BY TIMELY SPRAYING

Raleigh, N. C. June 17. The disappointment of having a nice crop of grapes go bad from rot may be avoided by spending a little time in spraying this season. Black rot, anthracnose, and other diseases take heavy annual tolls, while experiments made in this State have proven that these diseases may be controlled at a profit by timely and thorough spraying.

"The most effective spray to use for the control of these diseases is Bordeaux mixture," says G. W. Fant, extension specialist in the department of plant diseases of the State College of Agriculture. "This material can be prepared in large or small quantities in the proportion of three pounds of bluestone, four pounds of stone lime, to 50 gallons of water. If fifty gallons of spray are needed, dissolve the three pounds of bluestone in twenty-five gallons of water. Slake four pounds of stone lime in a separate container slowly with water and when the slacking has ceased, dilute with water to make twenty-five gallons and strain. Pour the two solutions together simultaneously into the spray tank while stirring thoroughly. One pound of arsenate of lead powder is added to each fifty gallons of spray for the control of insects. The spray is then ready to apply."

In order to protect the grapes as they develop, Mr. Fant states that the spray should be applied about every two weeks. Care should be taken to follow directions in preparing spray in order to prevent injury to the foliage.

LIME PAYS WITH CLOVER.

Lincolnton, N. C. June 14. "On Thursday I saw one of the most striking examples of how lime pays with red clover that I have ever seen," says County Agent J. G. Morrison of Lincoln County. "This demonstration is on the farm of Mike Kiser near Reepsville. Last year Mr. Kiser had an eight-acre field sowed to wheat. On six of these acres he broadcast two tons to the acre of ground limestone, leaving two acres without lime. He then planted red clover on the land putting all of his clover in on the same day under the same conditions with the exception that part of the land was limed and two acres were not."

"At the time of my visit, the clover on the limed land was over two feet high and just as thick as it could stand on the ground. Where he did not lime, the clover was only about ten inches high, thin on the ground and of a yellowish, unhealthy color."

According to Mr. Morrison, this demonstration by Mr. Kiser is proving of value in showing that clovers and other legumes do best where the land has been properly limed. Mr. Kiser's experience is being duplicated by many other farmers over the State according to reports from other county agents. The reports show that Tarheel farmers are finding that the

POWER Plus—

The World's Largest Producer of Quality Automobiles

TOURING CAR \$1045 f. o. b. factory

—plus extraordinary riding comfort—the comfort that comes of correct design; scientific balance; plenty of room in both the front and rear seats; deep, luxurious cushions and long, strong, resilient semi-elliptic springs.

—plus instant get-away, smooth, vibrationless performance at all speeds; a feature due to a specially designed crankshaft, machined on all surfaces—a feature found in no competitive car under \$2,500.

—plus long life and dependability, due to four large crankshaft bearings, care-

fully precisioned cylinders and pistons, perfectly balanced reciprocating parts, and specially prescribed Studebaker steels.

—plus obvious quality in every detail: hand-tailored top and side curtains; lasting, durable, genuine leather upholstery. Carefully selected fittings, lustrous black enamel finish.

These are a few of the "plus" features that make the Studebaker Light-Six an investment—not merely an expenditure. A car of recognized value that commands, at all times, the top price and ready sale in the used car market.
